

Global Cable Gland Solutions

COOPER Crouse-Hinds

Global Cable Gland Solutions

For more than 100 years, companies have come to rely on Cooper Crouse-Hinds for value they can trust to grow their business. Our comprehensive offering of electrical products meet customer application requirements in the most demanding industrial and commercial environments worldwide.

Our customer-first commitment to combine premium quality and reliability with superior technical support successfully minimizes downtime, reduces repair incidence, and improves safety and productivity. Every product we develop and every solution we engineer is clearly focused on lowering our customer's total cost of ownership.

Global termination solutions moving power and signals in the world's most demanding environments

From the deserts of Africa to the icy waters of the North Sea, the world turns to Cooper Crouse-Hinds for its complete gland solutions. Our cable glands are used in industrial and commercial applications throughout the world enhancing safety and productivity in the most severe environmental conditions.

Cooper Crouse-Hinds' global offering provides a termination solution for virtually every cable type used in hazardous and industrial environments. These glands are designed for strict adherence to global specifications meeting North American and International codes & standards including NEC, CEC, ATEX, IECEx and regional certifications.

Cooper Crouse-Hinds cable glands are the easiest and safest solution for your installation and maintenance needs. In any electrical or instrumentation installation, our glands are the reliable and safe way to move power and signals.

Global manufacturing presence and local inventory provides for flexibility in meeting our customers' installation and project coordination schedules. The result is best-in class on-time delivery, customer satisfaction and service. Our first-class technical gland team is available to support product application, technical specification, and onsite installation training on a global basis.

Navigating the Catalog

The catalog is divided into three main product sections so you can quickly find what you need:

- (1) Glands meeting International standards
- (2) Glands meeting North American standards
- (3) Accessories

Pages with **red headers** identify hazardous environment glands while **blue headers** identify industrial / general purpose glands. Additionally, Cooper Crouse-Hinds is always available to answer your simple or complex technical questions with the help of our product experts at any of the customer service numbers or email addresses listed on the back cover.

Key: ■ **Hazardous Area** ■ **Industrial/General Purpose**

Time-tested, quality cable glands from Cooper Crouse-Hinds offer:

- Complete termination solution for global cable applications
- Ease of cable termination providing labor and time management productivity
- Explosion-protected connections contributing to safe operation in harsh & hazardous environments
- Delivery meeting installation and project coordination schedules

International Standards

Time-tested, quality cable glands from Cooper Crouse-Hinds offer:

- Complete termination solution for cable applications meeting international standards
- Ease of cable termination providing labor and time management productivity
- Explosion-protected connections contributing to safe operation in harsh & hazardous environments
- Delivery meeting installation and project coordination schedules

Gland Type

Non-armoured

Cable Type

Non-armoured, armoured and tray cable
(does not terminate the armour)

Certifications and Compliances

- ATEX LCIE 97 ATEX 6008X – Exd IIC/Exe II/Ex tD /Ex II 2 GD
- IECEx LCI 05.0004X
- cULus Listed for Class I Zone 2 AEx e II/Ex e II
- cULus Marine Listed for Class I Zone 2 AEx e II /Ex e II
- NEMA 4X and IP68
- CEPEL cepel-EX-558/05X
- GOST-R POCC FR.B02011
- NEPSI N° GYJ071336U & GYJ071337U

Features

- Standard material is nickel-plated brass for superior corrosion resistance
- Provides a flameproof and weatherproof seal on the outer sheath of the cable
- Standard neoprene seal suitable for use in operating temperatures ATEX (-60°C to 100°C), IECEx and cULus (-40°C to 100°C)
- Available with optional silicone seal for extreme temperatures
- Available with metric or NPT threads
- See pages 42-45 for related accessories

ORDERING EXAMPLE:

OPTIONS (replace last digit with option number):

- 9 Stainless steel (316L)
- 8 Bronze
- 7 Aluminum
- 5 Silicone sealing ring with temperature range of -70° C to 220° C

Gland Type

Armoured barrier

Cable Type

Steel-wire armoured, steel-wire braided, steel-tape armoured, braided marine shipboard and lead sheathed (with addition of earthing washer)

Certifications and Compliances

- ATEX EExd IIC with SIRA 03ATEX2077X Mining Equipment Group I, M2 Ex II 2 GD
- CSA Certified for Class I Zone 1 Exd IIC, CSA file 220160
- NEMA 4X and IP66/68 rated at 25 meters
- DTS01 1991 deluge tested

Features

- Standard material is brass
- Armour clamping and bonding for multiple cable types
- Provides flameproof compound seal on conductors and weatherproof seal on outer sheath of cable
- An optional earthing washer for use with lead sheathed cable (contact customer service)
- Standard silicone seal suitable for use in operating temperatures -60° to 85°C
- Available with metric or NPT threads (nickel-plated threads – NPT only)
- An integral o-ring seal on entry threads (metric only)
- See page 46 for related accessories

All dimensions in millimeters unless otherwise noted

Features

- Standard material is nickel-plated brass
- Armour clamping and bonding for steel wire armoured cable
- Provides flameproof compound seal on conductors and weatherproof seal on outer sheath of cable
- Standard neoprene seal suitable for use in operating temperatures -20° to 40°C
- Available with metric, NPT or BSP threads
- See page 47 for related accessories

Gland Type
Armoured barrier

Cable Type
Steel wire armoured

Certifications and Compliances

- IECEx TSA 08.0004 - Exd IIC
- IP66 and 67

ORDERING EXAMPLE:

TWAB1M16 SS

Gland Type Options

OPTIONS (add after gland type):

- SS Stainless steel – add SS (i.e., TWAB1M16SS)
- B BSP threads – replace M with B (i.e., TWAB1B16)

Gland Type
Armoured

Cable Type

Steel wire armoured, steel wire braided, steel tape armoured, braided marine shipboard, lead sheathed (with addition of earthing washer) and tray cable

Certifications and Compliances

- NEMA 4X and IP68

Features

- Standard material is nickel-plated brass for superior corrosion resistance
- Armour clamping and bonding with no reversible components for easy installation, minimizing error
- Provides seal on inner jacket and weatherproof seal on outer sheath of the cable
- An optional earthing washer for use with lead sheathed cable (see page 45)
- Standard neoprene seal suitable for use in operating temperatures of -60°C to 100°C
- Available with optional silicone seal for extreme temperatures
- Available with metric or NPT threads
- See pages 42-45 for related accessories

North American Standards

Time-tested, quality cable glands from Cooper Crouse-Hinds offer:

- Complete termination solution for cable applications meeting North American standards
- Ease of cable termination providing labor and time management productivity
- Explosion-protected connections contributing to safe operation in harsh & hazardous environments
- Delivery meeting installation and project coordination schedules

Features

- Standard material is aluminum
- Stainless steel copper-plated spring provides grounding continuity of cable armour (MC cable only)
- Provides explosionproof compound seal on conductors and watertight seal on outer sheath of cable
- Standard neoprene seal suitable for use in operating temperatures -25° to 60°C
- Cold Shrink™ Kit is available for extra protection in aggressive environments (see page 51)
- Available with NPT threads
- See page 49 for related accessories

Gland Type

Armoured barrier, TECK armoured and non-armoured barrier

Cable Type

Metal-clad (interlocked or continuously welded corrugated armoured), non-armoured and tray cable

Certifications and Compliances

- UL Listed, CSA Certified Class I, Div. 1 Groups, A, B, C, D; Class II; Class III – UL File E122485, CSA File LR13046
- NEMA 4 and IP56 rated
- Wet locations

Gland Type
Portable cord connector

Cable Type
Non-armoured and tray cable

Certifications and Compliances

- CSA Certified Class I, Div 1. Groups C, D
- Class II, Div. 1 & 2, Groups E, F, G
- Class III – CSA File LR13046

CGBS Features

- Body – steel with zinc electroplate and chromate finish coat
- Gland nut – aluminum
- Body well for Chico A sealing compound (for ordering information please contact customer service)
- Standard neoprene seal suitable for use in operating temperatures -25° to 40°C
- Available with NPT threads

Gland Type
Portable cord connector

Cable Type
Non-armoured

Certifications and Compliances

- UL, cUL Listed Class I, Div. 1 Groups, B, C, D; Class II, Div. 1 Groups, F, G – UL File E10279

EBY Features

- Standard material is aluminum
- Factory sealed conductors and seal on outer sheath of cable
- Three, 12-inch long, #12 type SF-2 (150°C rating) stranded pigtails; two circuit wires and one identified grounding wire
- Three pressure connectors for 3-conductor cord, range #18 to #12 AWG
- Standard neoprene seal suitable for use in operating temperatures -25° to 40°C
- Available with NPT threads

All dimensions in inches unless otherwise noted

Gland Type

Armoured, TECK armoured and non-armoured

Cable Type

Metal-clad (interlocked or continuously welded corrugated armoured), non-armoured and tray cable.

Certifications and Compliances

- cULus Listed – UL File E36379
- NEMA 4 and IP56
- Wet locations

Features

- Standard material is aluminum
- Stainless steel copper-plated spring provides grounding continuity of cable armour (MC cable only)
- Watertight seal on outer sheath of cable
- Standard neoprene seal suitable for use in operating temperatures -25° to 60°C
- Cold Shrink™ Kit is available for extra protection in aggressive environments (see page 51)
- Available with NPT threads
- See page 49 for related accessories

All dimensions in inches unless otherwise noted

Gland Type
Non-armoured

Cable Type
Non-armoured and tray cable

Certifications and Compliances

- cULus Listed – UL File E23223

Features

- 90° angle with male thread
- Standard body material is Feraloy® iron alloy
- Standard gland nut material is steel
- Weatherproof seal on outer sheath of cable
- Standard neoprene seal suitable for use in operating temperatures -25° to 40°C
- Available with NPT threads
- See page 49 for related accessories

Cold Shrink™ Corrosion Protection Kits are specially designed for Cooper Crouse-Hinds TMC, TMCX and TECK fittings to provide protection against corrosive elements like salt spray and moisture. The TMC-K kit is made of a Cold Shrink material that is quick and easy to install on the gland. The Cold Shrink material is made of EPDM rubber that contains no chlorides or sulfurs. The protection kit installs easily over the gland without the use of a heat source to shrink the material tightly over the seal. The Cold Shrink material can be removed easily from the gland by simply cutting it off. See ordering information for complete offering of TMC-K Cold Shrink kits for corrosion protection. Cold Shrink is a registered trademark of the 3M Company.

Breather Drain – SIRA 99 ATEX 3050 U

Reference Guide

Guide for Explosive Atmospheres

Introduction

The production, processing, transportation and storage of flammable materials produces dusts, gases, mists and vapors, which, if not handled carefully, can create a potentially explosive environment. Examples of industries that create these by-products are: petrochemical, mining, mineral oil production and natural gas production. These flammable gases, vapors, mists and dusts form an explosive atmosphere when mixed with the oxygen in the air. If the atmosphere is ignited, explosions take place which can result in damage to property, bodily injury or even death. Common ignition sources are sparks, hot surfaces and static electricity. When the use of electrical equipment is required in a potentially explosive environment, it must be designed and constructed to circumvent the creation of an ignition source. Before electrical products can be used in a potentially explosive atmosphere, a representative sample must be fully tested and certified by a notified body for ATEX, and/or competent body for IECEx, and/or NRTL in the U.S.A.

This information is intended as a guide only. Further expert guidance should be sought before servicing maintaining or repairing any item of equipment in a potentially explosive atmosphere. When comparisons are made within (i.e. European and North American practices), this may be an approximation and individual standards/codes of practice should be consulted for precise details.

For a guide to the terms used in this section please see pages 62 and 63

Global Certification Philosophies

Under IEC/CENELEC, the philosophy used to classify areas and determine enclosure acceptability is based on normal operation. The NEC/CEC standards assume that abnormal conditions can and will occur. Products must be designed to operate under these conditions. This is why a product that is suitable for Zone 1 in a CENELEC country might not be acceptable for use in a country following NEC/CEC standards.

In addition, the “increased safety” method of protection concept used commonly in IEC/CENELEC does not consider a wire/conductor termination as a potential source of ignition in a Zone 1 area (hazardous in normal operation). In a NEC/CEC Division 1 area, all wire/conductor terminations are considered to be potential sources of ignition and must be enclosed in an explosionproof enclosure. This is the single most significant reason why the design of a product approved to IEC/CENELEC Zone 1 can be, and often is, so dissimilar to the design of a similar product approved for NEC/CEC Division 1.

All equipment intended for use in a potentially explosive atmosphere should be certified as suitable for such use. Methods are different for respective certification bodies.

International Certifications and Standards

ATEX

All equipment, both electrical and mechanical, intended to be put into service within the EU must be certified in accordance with the ATEX directive.

Like IECEx, the ATEX directive consists of two parts: the Product Quality Assurance Notice (PQAN) and the Quality Assurance Notification (QAN).

Unlike IECEx, the ATEX directive allows in certain circumstances for manufacturers to self-certify compliance with the directive.

Category	Equipment	Responsibility	
		Design	QAN
1	Elec	NB	NB
	Non-elec	NB	NB
2	Elec	NB	NB
	Non-elec	M	M
3	Elec	M	M
	Non-elec	M	M

M – Manufacturer
NB – Notified Body

To comply with the ATEX directive (94/9/EC), the manufacturer must:

- Identify the requirements that apply to the product
- Ensure that EHSRs (Essential Health and Safety Requirements) are met
- Apply necessary Conformity Assessment Procedures according to the Category of the equipment (or protective system)
- Label the product with their name, address and the CE Marking
- Create and maintain a technical file for the product
- Issue an **EC Declaration of Conformity**

Marking (EXAMPLE)

II 2 G

Explosion-protected in accordance with ATEX

II – Group II surface industries
2 – Category 2 equipment
G – Suitable for atmospheres containing gas

IECEx

Currently the IECEx scheme covers electrical equipment only.

Samples and appropriate documentation are supplied to the IECEx certification body (ExCB). The ExCB will test the electrical product against all appropriate recognized IEC standards and issue a test report (ExTR). The ExCB will also conduct a quality audit and issue a Quality Assessment Report (QAR). Once both the ExTR and QAR are issued, the ExCB will issue the Certificate of Conformity. There is no manufacturer's self-certification under the IECEx scheme.

Marking (EXAMPLE)

IECEx-LCI05.0004X-ExdIIC ExtD

LCI05.0004X Certificate Number

Exd – Protection Technique

IIC – Gas Group

Regional Certifications

Most countries outside Europe or North America use the IEC Standards as a basis for their own national standards. Examples are: The Russian Federation certifies equipment to GOST 'R' standards, which closely follow CENELEC practices. Kazakhstan has a certification practice (GOST 'K') where approval is normally based on compliance with CENELEC standards. Certification in China is based on compliance with international standards such as CENELEC, UL, CQST (Chinese standards based on IEC).

The table below defines the zones and indicates which category ATEX certificate is required.

Gases, Vapors, Mists		Dusts	
ATEX	IEC	ATEX	IEC
Category 1 G	Zone 0	Category 1 D	Zone 20
Category 2 G	Zone 1	Category 2 D	Zone 21
Category 3 G	Zone 2	Category 3 D	Zone 22

North American Codes and Standards

NEC & CEC

Samples and supporting documentation are submitted to the NRTL e.g. UL, CSA, FM, ETL. The product is tested in accordance with the relevant standards for ordinary and hazardous locations. After successful testing, the NRTL will generate a listing and allow the manufacturer to place the product on the market. Unlike with IECEx and ATEX, the NRTL will conduct periodic follow-up inspections to ensure that the product is still manufactured per the listing.

Marking NEC/CEC Divisions (Example)

CLI Div 1 Gr A,B,C,D

CLI – NEC/CEC Class (gas)

Div 1 – NEC/CEC Divisions

Gr A, B, C, D – Groups

Marking NEC Zones (Example)

CLI Zn 1 AEx d IIC T6

CLI – NEC Class (gas)

Zn1 – Zone 1

AEx – American 60079 series

d – Protection Technique

IIC – Group

T6 – Temperature Code

Marking CEC Zones (Example)

CLI Zn 1 Ex d IIC T6

CLI – NEC Class (gas)

Zn1 – Zone 1

Ex – Canadian 60079 series

d – Protection Technique

IIC – Group

T6 – Temperature Code

Area Classification

Gases, Vapors, Mists		Dusts		Explosive atmosphere is present:
IEC	NEC Divisions	IEC	NEC Divisions	
Zone 0	Class I Div 1	Zone 20	Class II Div 1 Class III	Continuously, long-term or frequently
Zone 1		Zone 21		Occasionally
Zone 2	Class I Div 2	Zone 22	Class II Div 2 Class III	Infrequently or short period

Note: North American legislation now allows Zones to be used to classify areas; where this practice is used it follows the NEC and CEC

Temperature

The selection of electrical equipment for use in hazardous areas must ensure the apparatus's maximum surface temperature does not exceed the auto ignition temperature of the gas present in the surrounding atmosphere. The reference ambient temperature of 40°C will be assumed unless otherwise stated on the apparatus labeling.

The T-rating obtained is based on normal temperature at the most onerous operating conditions.

Temperature Classification		
Zones	Divisions	Maximum Surface Temperature
T1	T1	450° C
T2	T2	300° C
	T2A	280° C
	T2B	260° C
	T2C	230° C
	T2D	215° C
T3	T3	200° C
	T3A	180° C
	T3B	165° C
	T3C	160° C
T4	T4	135° C
	T4A	120° C
T5	T5	100° C
T6	T6	85° C

Example, butane has an ignition temperature of 365° Celsius so equipment used in the vicinity of this gas would need a T rating of T2 or better

Gas Groups

The IEC gas groupings are divided into Group I for mining and Group II for surface industrial applications. Group II gases occurring in surface industries, are sub-grouped according to their volatility. Equipment approved for use in Group IIC is also safe to use with Groups IIB and IIA gases. Equipment approved for use in Group IIB is also safe to use with Group IIA gases. Under the North American system of gas grouping, there is not an official hierarchy as in IEC. Equipment is marked only in accordance with gas groups for which it has been tested. For example, equipment tested with group B, C and D gases would be marked "B, C, D."

Gas/Material	Zone Group	Division Group
Methane	I	-
Acetylene	IIC	A
Hydrogen	IIC	B
Ethylene	IIB	C
Propane	IIA	D
Metal dust	-	E
Coal Dust	-	F
Grain Dust	-	G
Fibers and Flyings		-

ZONE PROTECTION METHOD	SYMBOL	CONCEPT OF PROTECTION	IEC/CEC/NEC ZONE	IEC STANDARD	EN STANDARD	NEC ZONE STANDARD
Flameproof Enclosure An enclosure used to house electrical equipment, which when subjected to an internal explosion will not ignite a surrounding explosive atmosphere	Exd	Contain the explosion	1,2	IEC 60079-1	EN 60079-1	UL 60079-1
Intrinsic Safety A technique whereby electrical energy is limited such that any sparks or heat generated by electrical equipment is sufficiently low as to not ignite an explosive atmosphere	Exi	Limit the energy of spark	0,1,2	IEC 60079-11	EN 60079-11	UL 60079-11
Purged and Pressurized Electrical equipment is housed in an enclosure which is initially purged to remove any explosive mixture; then it is pressurized to prevent ingress of the surrounding atmosphere prior to energization	Exp	Keep flammable gas out	1,2	IEC 60079-2	EN 60079-2	UL 60079-2
Oil Immersion Electrical components are immersed in oil, thus excluding the explosive atmosphere from any sparks or hot surfaces	Exo	Keep flammable gas out	1,2	IEC 60079-6	EN 60079-6	UL 60079-6
Increased Safety Equipment is designed as to eliminate sparks and hot surfaces capable of igniting an explosive atmosphere	Exe	No arc or sparks	1,2	IEC 60079-7	EN 60079-7	UL 60079-7
Non-sparking Sparking contacts are sealed against ingress of the surrounding atmosphere; hot surfaces are eliminated	ExnA	No arc or sparks	2	IEC 60079-15	EN 60079-15	UL 60079-15
Restricted Breathing	ExnR	Keep flammable gas out	2	IEC 60079-15	EN 60079-15	UL 60079-15

DIVISION PROTECTION METHOD	CONCEPT OF PROTECTION	NEC DIVISION	NEC STANDARD
Hermetically Sealed Equipment sealed against the entrance of an external atmosphere where the seal is made by fusion	Keep flammable gas out	2	UL 1604
Explosionproof An enclosure used to house electrical equipment, which when subjected to an internal explosion will not ignite a surrounding explosive atmosphere	Contain the explosion	1,2	UL 1203
Intrinsic Safety A technique whereby electrical energy is limited such that any sparks or heat generated by electrical equipment is sufficiently low as to not ignite an explosive atmosphere	Limit the energy of spark	1,2	UL 913
Purged and Pressurized Electrical equipment is housed in an enclosure which is initially purged to remove any explosive mixture; then it is pressurized to prevent ingress of the surrounding atmosphere prior to energization.	Keep flammable gas out	1,2	NFPA 496
Oil Immersion The electrical components are immersed in oil, thus excluding the explosive atmosphere from any sparks or hot surfaces	Keep flammable gas out	2	UL 1203
Non-Incendive The equipment is so designed as to eliminate sparks and hot surfaces capable of igniting an explosive atmosphere	No arc or sparks	2	UL 1604

Ingress Protection

The **IP Code** classifies the degrees of protection provided against the intrusion of solid objects (including body parts like hands and fingers), dust, accidental contact, and water in electrical enclosures. It consists of the letters **IP** followed by two digits. The standard (IEC 60529) aims to provide users more detailed information than vague marketing terms such as "waterproof".

The digits ('characteristic numerals') indicate conformity with the conditions summarized in the tables below. Where there is no protection rating with regard to one of the criteria, the digit is replaced with the letter **X**.

The first digit indicates the level of protection that the enclosure provides against access to hazardous parts and the ingress of solid foreign objects.

One important note is that IP ratings DO NOT represent a hazardous locations rating. A product can have an IP rating and not have a hazardous locations rating, however a product with a hazardous locations rating must have an IP rating.

First Index - Foreign Bodies Protection, Solids		
Index	Protection Against Human/Tool Contact	Protection Against Solid Objects (Foreign Bodies)
0	No special protection	No protection
1	Back of hand, Fist	Large foreign bodies, diam. >50mm
2	Finger	Medium foreign bodies, diam. >12mm
3	Tools and wires etc. with a thickness >2.5mm	Small foreign bodies, diameter >2.5mm
4	Tools and wires etc. with a thickness >1mm	Granular foreign bodies, diameter >1mm
5	Complete protection (limited ingress permitted)	Dust protected; dust deposits are permitted, but their volume must not affect the function of the unit
6	Complete protection	Dust-proof

Second Index - Water Protection, Liquids		
Index	Protection Against Water	Protection From Condition
0	No special protection	No protection
1	Water dripping/falling vertically	Light rain/Condensation
2	Water sprayed at an angle (up to 15° degrees from the vertical)	Light rain with wind
3	Spray water (any direction up to 60° degrees from the vertical)	Heavy rainstorm
4	Spray water from all directions (limited ingress permitted)	Splashing
5	Low pressure water jets from all directions (limited ingress permitted)	Hosedown, residential
6	High pressure jets from all directions (limited ingress permitted)	Hosedown, commercial, e.g., ship decks
7	Temporary immersion, 15 cm to 1m	Immersion in tank
8	Continuous immersion as agreed upon by the manufacturer	Greater than IP X7

Comparing NEMA and IP Enclosure Ratings

This comparison is only approximate, and it is the responsibility of the user to verify the enclosure rating necessary for the given application.

Enclosure type	IP10	IP52	IP54	IP56	IP65	IP66	IP67
1	●						
3			●				
3R			●				
3S			●				
4				●			
4X				●			
5		●					
6							●
6P							●
7							
8							
9							
10							
12		●					
12K		●					
13			●				

Enclosure types 7, 8, 9, and 10 are U.S.-type enclosures only

NEMA

North American practice is to use NEMA standards to describe ingress protection, e.g.:

NEMA 3 is similar to IP54

NEMA 4 is similar to IP56

NEMA 4X is similar to IP56

NEMA 6 is similar to IP67

Provides a Degree of Protection Against the Following Conditions	Type of Enclosure									
	1	2	4	4X	5	6	6P	12	12K	13
Access to hazardous parts	X	X	X	X	X	X	X	X	X	X
Ingress of solid foreign objects (falling dirt)	X	X	X	X	X	X	X	X	X	X
Ingress of water (Dripping and light splashing)	...	X	X	X	X	X	X	X	X	X
Ingress of solid foreign objects (Circulating dust, lint, fibers, and flyings)	X	X	...	X	X	X	X	X
Ingress of solid foreign objects (Settling airborne dust, lint, fibers, and flyings)	X	X	X	X	X	X	X	X
Ingress of water (Hosedown and splashing water)	X	X	...	X	X
Oil and coolant seepage	X	X	X
Oil or coolant spraying and splashing	X
Corrosive agents	X	X
Ingress of water (Occasional temporary submersion)	X	X
Ingress of water (Occasional prolonged submersion)	X

		CABLE TYPES													
		MC	MC-HL	TC	MI	TECK	PLTC	MV	ITC	ITC-HL	SWA	STA	SWB	Braided marine shipboard	Non-armoured
North America	Div 1		X		X	X*				X				X**	
	Div 2	X	X	X	X	X	X	X	X	X	X			X	X
	Zone 1		X		X	X*				X				X**	
	Zone 2	X	X	X	X	X	X	X	X	X	X			X	X
	IEC			X							X	X	X	X	X

All wiring for Div 1 is suitable for Div 2

All Wiring for Zone 1 is suitable for Zone 2

* Canada Only

** Armoured and sheathed marine shipboard cable can be used in Class I Division 1 locations offshore as mentioned in API RP114F

NEC/CEC Wiring Methods

As shown in the table above the only cables that are permitted for use in Class 1 Div 1 are those that are mechanically protected by armour. The three protection techniques approved for Class 1 Div 1 locations are “Intrinsically Safe,” “Purged and Pressurized” and “Explosionproof.” When using the explosionproof protection technique, the cable must be sealed at the point of entry with an approved sealing device.

IEC Wiring Methods

The following is a decision tree from IEC60079-14 for cable entry devices into flameproof enclosures.

General Terms

Ambient Temperature	– All encompassing temperature within a given area	MC	– Metal-clad Cable
Armour	– Mechanical protection usually accomplished by a metallic layer of tape, braid or served wires; normally found under the outer sheath of a cable	MC-HL	– Metal-clad Cable-Hazardous Location, for Class I Division 1 locations
Armoured Cable	– A cable provided with a wrapping of metal, usually steel wires, flat tapes, or interlocked tapes, primarily for the purpose of mechanical protection	MI	– Mineral Insulated
ATEX	– French term Atmosphères Explosibles (EU directive 94/9/EC)	MV	– Medium Voltage
AWG	– American Wire Gauge	NB	– Notified Body
Braid Armour	– A fibrous or metallic group of filaments interwoven in cylindrical form covering one or more conductors	PLTC	– Power Limited Tray Cable
Cable Gland	– A device used for the entry of cables or cords into electrical equipment providing armour clamping, sealing and/or strain relief	Primary Seal	– A seal that isolates process fluids from an electrical system and has one side of the seal in contact with the process fluid
CB	– Certification Body	QAR	– Quality Assurance Report – quality portion of IECEx certification
Cold Flow	– Any permanent deformation of the inner sheath of a cable due to pressure or mechanical force, without the aid of heat softening	QAN	– Quality Assurance Notice – quality portion of ATEX certification
CWCMC	– Continuously Welded Corrugated Metal-clad Cable	Secondary Seal	– A seal that is designed to prevent the passage of process fluids at the pressure it will be subjected to upon failure of the primary seal (secondary seals are required for sealing conduits and cables in Class I explosive gas atmospheres, where failure of a primary seal could allow flammable process fluids to leak into electrical equipment, with disastrous results)
DTSO1	– Deluge Test developed by Shell, mainly used on off-shore rigs	SWA	– Steel Wire Armour
Directive	– A legislative act of the European Union	STA	– Steel Tape Armour (also DSTA for double steel wire armour)
EHSR	– Essential Health and Safety Requirements – Requirements from new approach Directives, e.g., LVD, ATEX	SWB	– Steel Wire Braid
Hazardous Location	– Location where fire or explosion hazards may exist due to the presence of flammable gases, dusts, or fibers	TC	– Tray Cable
IECEX CB	– IECEX Certifying Body	TC-ER	– Tray Cable Exposed Run
IECEX TR	– IECEX Test Report	TECK	– A type of metal-clad interlocked armour cable (mainly used in Canada)
IP	– Ingress Protection	Wet Locations	– Installations underground or in concrete slabs or masonry in direct contact with the earth; locations subject to saturation with water or other liquids, such as washdown areas; and in unprotected locations exposed to weather
ITC	– Instrument tray cable		
ITC-HL	– Instrument Tray Cable Hazardous location		
LVD	– Low Voltage Directive (EU directive 2006/95/EC)
