

Night Scene[®]

BY PROGRESS LIGHTING

FIRST IMPRESSIONS COUNT.

Professional outdoor lighting can dramatically improve the appearance of your home while providing additional safety and security. Night Scene can highlight the architectural elements of your home or turn your beautiful garden into a night-time treasure.

People choose landscape lighting to display the beauty of their residence and surroundings. Lighting can extend the daylight hours, and add safety and security.

FOUR BASIC STEPS IN LANDSCAPE LIGHTING

STEP 1. WHAT TO LIGHT

Examine your home and its surroundings. Ask yourself: what favorite landscape features need accent lighting? Decide what you would like to illuminate (architectural features of the house, flowers, shrubs, trees, sculpture, deck, path or general areas). Determine if you want these elements to be focused upon with accent lighting, or to be provided with general illumination from background lighting.

STEP 2. CHOOSING A LIGHTING SYSTEM

120-VOLT LINE-VOLTAGE SYSTEM

A 120-volt system—standard in most American homes—is usually recommended if the lighted subject is larger than 25 ft. or positioned more than 30 ft. from the fixture.

12-VOLT LOW-VOLTAGE SYSTEM

12-volts is preferable for less-permanent lighting fixtures that can be moved to accommodate plant growth or changing needs.

STEP 3. LANDSCAPE LIGHTING TECHNIQUES

There are many different techniques for lighting areas or objects. These techniques are path lighting, spread lighting, spot lighting in an upward direction or downward direction, grazing, cross lighting, shadowing and silhouetting. See the Night Scene Catalog for more detailed information.

STEP 4. LANDSCAPE LIGHTING PLANS

It will help to draw a plan, in scale as if looking down on the house or grounds. This will help you determine what areas you want to accent or provide general illumination. Consider where your transformer will be installed if a 12 volt system is selected. Placement of your fixtures will help determine cable lengths and size required.
