

LIGHTING

NEW PRODUCT ANNOUNCEMENT

Aluminum Channels

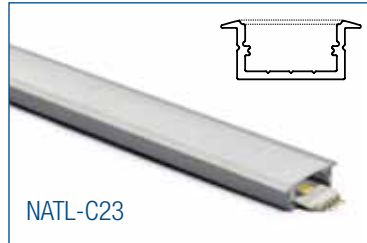

for all Tape Lights

Nora introduces 6 configurations of Aluminum Channels for the LED Tape light. The channels can be used to hold the tape in visible applications or can be used to hide or conceal the tape in other applications. Offered in shallow and deep sizes, with or without wings the channels are field cuttable.

The unique “J” shape can be used to conceal tape in an undercabinet, book case or framing application. The “J” can even create an instant cove for accent lighting. Use the deep channel with wings to mount in a cabinet or wall to create visual interest or a small slim line of usable light.

FEATURES

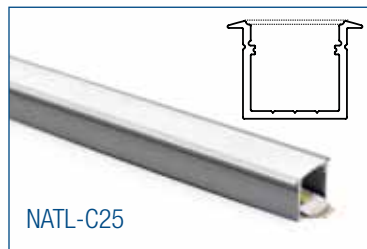

- Plastic Diffuser and End caps included
- Aluminum extrusion
- Field cuttable
