## ETi Solid State Lighting stands for value, quality, and performance.

Our parent company, Elec-Tech Solid State Lighting (HK) Ltd., is a 100% vertically integrated global supplier of LED components, lamps, and luminaires to many of the largest lighting brands and retailers in the world. The company’s scale, attention to quality, and ability to bring products to market quickly has allowed us to establish ETi Solid State Lighting, Inc. as a leader for LED lighting in North America, with an extensive and growing line of products for the residential, commercial, and industrial markets. With a tireless focus on customer satisfaction, ETi is continuously striving to provide the latest in LED lighting technology, while delivering value to our distributor customers, the product installer, and the end-user.

# Flushmounts

ETi's extensive flushmount product offering can replace most fixture types in residential and commercial spaces. Available in a variety of designs and color temperatures, ETi flushmounts are ideal for hallways, corridors, utility spaces and work areas.

The addition of our patent pending Color Preference® technology allows the installer to use an integrated switch to select the preferred color temperature from warm white to daylight settings.

# Patented Spin Lights™

Our Spin Light™ is the easiest way to convert a plain lampholder into an attractive, energy efficient LED flushmount fixture. Don't be tempted by others claiming they have the same product ... ETi has the one and only patented\* Spin Light™!

Installation is as easy as screwing in a light bulb to replace exposed sockets and bare bulbs in basements, garages, closets and other areas with high quality LED lighting. This versatile product can also be installed quickly in new locations with the included SpeedMount™ direct wire accessory.

The addition of our patent pending Color Preference® technology to some items allows the installer to select the color temperature through a switch on the unit.

# Ceiling Lights

Stylish and sophisticated, the ETi ceiling light series brings elegant LED lighting solutions to commercial, retail, hospitality, residential, and office spaces. Available with stepped or traditional smooth lenses and pleasing design features, the products offer exceptional performance for precision lighting applications, while reducing energy and maintenance costs when compared with conventional light sources.

# Vapor Tights

With captive stainless steel latches and an attached lens design, our 4-foot Vapor Tight fixtures are durable, easy-to-install LED lighting solutions for tough environments. These fixtures start reliably in cold environments to -22°F and are ideal for canopies, enclosed parking decks, garages or other industrial applications.

ETi vapor tight fixtures have easily replaceable light engines and are also compatible with Battery Back-Up and Motion Sensor accessory options.

# Strip Lights

Lasting more than 5 times longer than fluorescent alternatives, ETi LED Strip Lights offer exceptional performance while reducing energy and maintenance costs.

With outstanding versatility, our Strip Lights are perfect for both residential and industrial uses. Some models include a patent pending linking feature, allowing up to 300 total watts to be connected via the included linking cable or end-to-end connector. Whether individual or linked, standard or high lumen output, plug-in or direct wire, 120V or multi-volt, surface mounted or suspended, these slim fixtures provide the right amount of light where it is needed.

# Wrap Lights

With low profile designs and even light distribution, the ETI family of LED wrap lights offers attractive, energy efficient alternatives to traditional fluorescent wrap light fixtures common in residential, commercial, and institutional buildings. Available in 2' or 4' lengths, these fixtures are perfect options for use in closets or stairwells, and can also be modified with motion sensor or battery back-up accessories.

# Flat Panels

Flat panels provide excellent aesthetics at an affordable cost. Whether the installation is new construction or a retrofit project, our flat panels can replace lay-in troffers, baskets, and parabolic fixtures. ETI's standard flat panel offering has a back side driver for drop-in and grid ceiling applications, while our premium flat panels are available with an integrated driver, allowing for true surface mount installation. Both surface mounting and suspension mounting kits are available.

# Under Cabinet Lights

An excellent replacement for fluorescent or xenon lights, ETi LED Under Cabinet lights come in a range of sizes, so you can easily customize lighting to your cabinet layout. Link multiple fixtures from one power source using the included linking cable or end-to-end connector. Residential and commercial uses beyond typical under upper cabinet installation include laundry rooms, work shops, desks, shelving, above cabinets, or under lower cabinets to illuminate the toe kick area.

# Shop/Task Lights

Our slim LED shop lights are designed to be used anywhere a traditional fluorescent fixture is used. Typical applications include work shops, workbenches, light manufacturing areas, and general utility spaces.

But ETi shop lights are not just solutions for work shops and garages. With special features like linkability and Bluetooth® speaker technology available, they also make great task lights for craft tables, basements, storage spaces, and laundry areas.

# LED Tube Ready Fixtures

High bay lights are an excellent option for commercial facilities requiring well-distributed, uniform light in open areas. Our ETi Type B LED Tube Ready High Bay line is compatible with any of our Type B integral driver ballast bypass T8 or T5 LED Tubes. Choose from styles designed to accommodate four or six LED tubes. Each fixture is built without a ballast and comes with non-shunted sockets already installed.

To maximize the versatility of the fixtures, they work with either “Power Either End” or “Single End Power” wiring configurations. For ease, we’ve pre-wired the sockets to a quick disconnect, allowing the installer to move faster through the installation process.

# Wall Packs

Ideal for new or retrofit applications, ETi's Wall Pack product line offers durable all-weather diecast construction with your choice of a traditional look or more contemporary full cutoff design. When used as replacements, our wall packs will cover the existing footprint of most metal halide or HPS fixtures, preventing unsightly mismatched paint or fading issues. Photocell sensors for automatic dusk to dawn operation and cut off shields for glare reduction are available as accessories.

# Security Lights

Designed with rugged all-weather metal construction for long life and optimal performance, our security lights provide even, bright light to protect your home or business, while saving money with energy efficient integrated LEDs. Toolless heads make adjustments easy. And with a built-in photocell for dusk-to-dawn light or a passive infrared motion sensor, you can count on a safe and securely illuminated space with minimal maintenance.

# GrowElite™ Grow Lights

Ideal for soil or hydroponic planting in greenhouses, nurseries, commercial growing operations, and indoor gardens, our GrowElite™ LED grow lights emit the bands of the light spectrum that plants absorb the most, accelerating plant growth for higher yields. Full spectrum LED can be adjusted to promote Vegetating or Flowering stages of development.

Our indoor LED grow lights consume 50% - 65% less energy than high intensity discharge alternatives. As a much more efficient light source, our LED grow lights generate less heat to avoid leaf burn and eliminating the need for additional cooling sources.

# Ballast Compatible Tubes

ETi offers both ballast compatible (Type A) and ballast bypass (Type B) fluorescent tube replacements that can be used in many residential and commercial applications. But, unlike fluorescent, LED tubes contain no mercury, which is safer for you and better for the environment.

The addition of our patent-pending Color Preference® technology to some items allows the installer to use an integrated switch to select the preferred color temperature.

Ballast Compatible (Type A) tubes are direct replacements that can be used without removing the electronic ballast from the existing fixture.

# Ballast Bypass Tubes

Ballast Bypass (Type B) tubes use an integral driver. This means the ballast in the existing fixture must be disconnected and power run directly to the sockets. Most of ETi's Ballast Bypass tubes are designed to be "Power One End", which requires that the fixture sockets be changed to non-shunted sockets. Now with "Power Either End" tubes added to the ETi product line, existing sockets in the fixture can continue to be used if they are in good condition.

# HID Replacements 360°

ETi LED HID 360° replacement lamps are a convenient way to upgrade inefficient HID lamps by simply bypassing the existing ballast and connecting the 120-277V line voltage directly to the sockets. No ballast or external driver is required, which allows the current fixture to continue to be used.

Engineered to the highest standards, our HID 360° replacements come standard with built-in surge protection and internal IC protection for long life reliability.

# HID Post Top Replacements

With ETi LED post top lamps, now you can replace inefficient HID lamps by bypassing the existing ballast and connecting the 120-277V line voltage directly to the sockets. No ballast or external driver is required, which allows the current fixture to remain in place. Plus, the unique adjustable socket adapter provides the ability to change the post top lamp from up light to down light in a snap.

Engineered for reliability and long life, our LED post top lamps come standard with built-in surge protection, as well as internal IC protection.
