SPLICES AND TAPS

Non-Metallic Splice & Tap

NMS, NMT SERIES

FEATURES

The NSi NM Splice & Tap method provides a fast and reliable way to connect 12 and 14 AWG circuits using non-metallic (NM) cable. It eliminates the need for junction boxes, covers, fittings, connectors – and is approved for use in a variety of applications including: residential branch circuits, manufactured housing and pre-fabricated building structures. When adding new circuits in residential applications, NM connectors eliminate both the need to cut into the existing wiring and the extra junction boxes and associated hardware required for the tap connection.

In factory installations within pre-fabricated structures, the NM connectors eliminate costly time-consuming on-site wiring. As individual modules are joined, splices and taps are simply snapped together easily by assembly crews with no special training or tools.

Termination is easy. Split the cable, remove the sheathing and cut the splice conductors to length (if necessary). With the tap, individual conductors do not need to be stripped, only exposed. Clear cover installation is done with slip-joint pliers. The installation displacement contacts eliminate the need to strip individual conductors. Simply plug the connectors together and the installation is complete.

Protect those fine-stranded wires with Polaris Grey™.

Here's our secret: Polaris Grey™ comes with an integral sleeve which protects the fine strands and helps the conductor maintain its shape during the tightening process. The sleeve eliminates breakage of the strands and reduces stress on the conductor and therefore the potential for hot-spots. Replacement sleeves can be purchased separately.

Specially designed for connecting and terminating fine-stranded, flexible copper conductors. Polaris Grey™ combines the reliability and safety of a compression connection with the ease, affordability and flexibility of a mechanical connection.

Motor replacement is now really easy. Simply strip the cable, insert it into Polaris Grey™, tighten the hex head screw, replace the cap.

POLARIS™ Installation Instructions

POLARIS BLUE™ SUBMERSIBLE & DIRECT BURIAL CONNECTORS

1. Refer to the installation chart on the other side for; overall distances, strip lengths, and tightening torque values.
2. Conductor must have insulation acceptable for direct burial.
3. Wipe off any foreign material (dirt, water, oil, etc.) on insulation of conductor to be spliced.
4. Mark the conductor insulation with the proper overall distance for the connector model number being used.
5. Mark the conductor insulation with the proper strip length for the connector model number being used.
6. Remove the conductor insulation up to the marked strip length, be sure not to "score" or "nick" the conductor.
7. Using the oxide inhibitor provided, lubricate the conductor insulation by lightly coating the exposed conductor and insulation up to the marked overall distance.
*****NOTE: Step 7 is optional, but will make installation quick and easy.*****
8. Back off pressure screws enough to allow the stripped conductor to enter the connector block.
9. Insert the conductor into the connector, slide the connector over the conductor until the end of the connector insulation is within 1/8" of the overall mark on the conductor insulation.
10. Tighten the pressure screws to the proper torque value for the connector model number being used.
11. Insert the caps to cover the pressure screws. Press caps firmly into place.
12. Do not alter the connector to the connector insulation in any manner!
13. Use only the pre-installed oxide inhibitor.
14. Caps are not a sealing mechanism in the wire entry ports, all wire entry ports must have a properly sized conductor installed.

INSTALLATION INSTRUCTIONS ISPB & ISPC SUBMERSIBLE CONNECTORS

1. Remove cable insulation 1-1/8" from end of conductor (insulation strip length imprinted on conductor port).
2. Wire brush bare conductor.
3. Remove conductor sleeve from connector.
4. Select and cutoff the correct step end at tip of arrow on the sleeve. Make sure to cut sleeve straight across the end of step. Discard sleeve for 300 and 350 MCM.
5. Reinsert the conductor sleeve (rocket) if required.
6. Remove set screw access plug and loosen set screw to allow cable insertion.
7. Insert conductor into the cable outlet or rocket until conductor hits the back of the connector and tighten set screw to the recommended torque (table 1).
8. Replace set screw access plug.

ASSEMBLY OF POLARIS GREY™ CONNECTORS

Wire insulation must be stripped in accordance with the Standard Connector Strip Length Chart below. The wire insulation on a properly installed connector must be inside the conductor port no less than 3/8 inch. Pressure screws **MUST** be secured at the torque value given on the Torque Charts corresponding to the connector, wire size and classification shown on the reverse side. The UL listing is for stranded wire only, CU 600 Volts maximum for building wiring and 1000 volts maximum for signs or luminaries. The connector and insulation temperature rating is 90°C.

FireStop™ INTUMESCENT CAULK

FireStop™ Intumescent Caulk is water-based, single component elastomeric sealant intended for use as a firestop system component. It forms an economical yet durable, flexible and watertight bond with most construction materials. It is applied independently for “caulk and walk” systems or over mineral wool or backer rod to seal the openings where building services such as pipes and cables penetrate fire rated assemblies. Will not crack or crumble as the physical properties remain stable over time. It tools easily and cleans up with water. May be applied by caulking gun or trowel. ASTM-E 814 and UL 1479.

FireStop814™ CAULK

FireStop814™ Fire stopping caulk is a single component, non-combustible, non-intumescent material for residential and commercial applications. Colored red for easy inspection, FireStop814 creates an effective barrier against flames, smoke, and toxic gasses and has superior adhesion and gunnability. FireStop814 is for use in annular spaces around wires and pipes, in one- and two-hour fire rated assemblies. It restores the integrity of firestops in residential and commercial construction. Meets UL 1479/ ASTM-E814 standards.

FireBlok136™ CAULK

FireBlok136™ Fire-blocking caulk is a single component, non-combustible material for residential applications. Colored red for easy inspection, FireBlok136 creates an effective barrier against flames, smoke, and toxic gasses and has superior adhesion and gunnability. FireBlok136 is for use in annular spaces around wires, pipes, ducts, vents and other penetrating items at ceiling and floor openings; and room to room in wood and steel frame constructions. It restores the integrity of fireblocks in one and two family construction. Exceeds ASTM-E136 standards for fireblocking residential requirements prescribed by all major-model building codes, and also meets or exceeds requirements of UBC, BOCA, SBC, IRC, NYS and MA codes. Meets UL 1479/ ASTM-E136 standards.

FIRE RATED PUTTY PADS

NSi Fire Rated Putty is a moldable non-curing, one-component fire rated material for through penetration fire stop systems. In the event of a fire, Putty will expand when exposed to fire, forming an insulating char, which prevents the spread of flames, smoke, gas and water through penetration openings. Installation is easy as there are no additives, there is no mixing and no curing time is required. The putty is applied by hand and adheres to all common building surfaces. Putty can be installed in confined or occupied spaces since there are no volatile solvents or asbestos fillers.

NSi Putty systems are rated up to 3 hours in accordance with ASTM E 814, UL 1479 and ULC/CAN4-S115-M standards. NSi Fire Rated Putty is available in sticks or pads. Moldable Putty Pads are available in two sizes, 6" x 7" x 1/8" or 7" x 7" x 1/8", and are classified as a wall opening protective material. Use them to protect metal electrical cabinets, outlet boxes and mechanical cabinets. STC Rating 49.

FireStop8136™ PILLOWS

FireStop™ Pillows are a single step firestop system component. Intended for wall and/or floor openings through fire separations where temporary or permanent firestops are required. They are ideal where cable retrofitting is frequent and anticipated. Quick and clean single product installation. Self-supporting – no wire lath or mesh is required. They are to be packed tightly into the voids between penetrating items and the perimeter of the opening. During a fire, the intumescent component within each pillow dramatically expands to seal the opening from fire, thereby maintaining the integrity of the fire separation. FireStop Pillows consist of an intumescent layer sandwiched between non-combustible insulation, all enclosed in a hermetically sealed polyethylene shell. No sealant or putty is required. Easy to install, easy to remove – a quick and clean single product installation. ASTM E 814 and UL 1479.
