# Disconnect Switches and Operating Mechanisms

## Section 9

### HPC™, New Generation High-Pressure Contact Switch

Top- or Bottom Feed

800-4000 Amperes - 600 Vac Max.

#### Product Introduction

GE type HPC™ switches are UL listed in accordance with Standard 977, Fused Power Circuit Devices (UL File No. E-51827). The charge-after-close mechanism provides stored energy, quick-make/quick-break operation. Multiple spring-loaded high-pressure current-carrying contact arms and an arcing contact arm provide excellent current-carrying capability without sacrificing high interrupting fault performance. These switches are 100 percent rated and can interrupt, on a make and break basis, a minimum of 12 times their nameplate rating without fuse assistance at 600Vac. Complete HPC™ switch and Class L fuse coordination is therefore achieved for all levels of fault current up to 200,000 rms amperes symmetrical at 600Vac maximum. Type HPC™ switches used as service disconnects comply with the National Electrical Code Article 110.10 for adequate short-circuit current and ground fault protection.

#### Greater Convenience and Operational Safety

The controls and status indicators you need most are readily accessible. The flush-mounted handle, ON/OFF buttons, test receptacle, bell alarm reset buttons — with or without lockout — are easily reached and all are double-insulated from live components. And, for added security, a standard padlock device lets you prevent accidental or unauthorized closing of the switch.

HPC™ switches, new generation are versatile and designed for a wide variety of applications including temperature insensitive control units, push-to-open and close control, charge-after-close operation, 3 cycle closing, UL listed (file E-51827) field installable accessories suitable for 50/60 Hz. All accessories and control wiring are prewired to dedicated, secondary terminal points on each switch.

#### Features

##### —High Durability—Safety of Operation

High-dielectric strength, glass reinforced insulated case.

##### —High Interrupting Capability

Arc chute of unique construction suppresses arcs and cools gases rapidly, providing quick arc interruption and extended switch life.

##### —High Transient Voltage Withstandability

Interphase partitions mesh with switch midcover to completely isolate each pole.

##### —Extended Switch Life

Preloaded constant pressure pivot eliminates braid whip and fraying on high short circuit currents and repeated operations.

##### —Positive “ON-OFF” Indication

Green (OFF), Red (ON), provides visual indication regarding the position of the switch contacts.

##### —Easy Operation—Quick Make

Flush-mounted handle, operated 6 times to charge; push button on remote close to close the switch

##### —Emergency Open—Quick Break

Finger-tip “OFF” button rapidly opens the switch contacts.

##### —Fuse Mounting Bolts for Ease of Mounting Fuses

##### —Padlocking Provisions Standard

#### Product Forms

—**Top Feed**—Line terminals at top of switch.

1600A HPC™ Switch (Type SHP, Top-Feed)

1600A HPC™ Switch (Type SHP, Bottom-Feed)

—**Bottom Feed**—Line terminals at bottom of switch; fuses are de-energized when switch is in OFF positions. Same size as top-feed.

#### Quick, Error-Free Installation of Universal Accessories

Drop-in bell alarm, bell alarm with manual reset lockout, shunt trip, shunt trip with lockout, and undervoltage release install in seconds. No special tools. No switch disassembly. Just slide them into place. The modules are universal across all frame sizes and each is mechanically keyed to its compartment so you make the right connection, every time. These accessories are field installable and upgradable.

GE's innovative, modular, drop-in accessories provide the ultimate customer solution for field customization:

#### UL Listed

- Accessory combination (one each) shunt trip, shunt trip with lockout, undervoltage release, bell alarm (alarm only), bell alarm with lockout.
- Rated 12-250 Vdc through 12-240 Vac, continuous duty.

#### Complete installation in seconds without special tools, switch disassembly or adjustment

- The user can select how protective control unit functions, the shunt trip (with or without lockout), and UVR accessories interface with the bell alarm and bell alarm with lockout accessories: An overcurrent, shunt trip, or UVR trip can be set to actuate the bell alarm or bell alarm with lockout. Any combination of output actions based on inputs can be selected.
- Shunt trip and undervoltage trip targets are clearly displayed by the control unit LCD.

#### Pre-wired wire harness makes field installation a snap for:

- Motor operator with remote charge indicator
- Form C auxiliary switches, up to 12-stage maximum
- Remote close solenoid

#### Additional field-installable accessories including:

- Key interlock provision (4 locks maximum)
- Limited access ON/OFF cover
- Mechanical operations counter
- Door interlock

# Disconnect Switches and Operating Mechanisms

## HPC™ High-Pressure Contact Switch

Top- or Bottom-Feed  
800-4000 Amperes - 600 Vac Max.

### HPC™ Switches with Electric Trip

For use with Ground Break™ components or for remote tripping. Fuses not included.  
For resistance-grounded systems or where zone selective interlocking is required, electric trip HPC™ switches with Ground Break™ system components are recommended.

Integral Ground Fault HPC™ Pick-up and Delay Time-current Curves

Includes fuse-mounting hardware and door-catch interlock bracket. (Fuses not included.)

**NOTE:** The 800-3000 ampere integral ground fault HPC™ switches can easily be installed in the space occupied by a manual HPC™ switch of the same ampere rating. The 4000 ampere switch, being 3 inches wider, may require some modification.

**NOTE:** Integral ground fault tripping is accomplished by a low energy, flux-shifting tripping mechanism and is not suitable for remote (parallel) tripping. If remote tripping is required, add suffix RT1 120-240Vac or RT2 480-600Vac to above product number.

NOTE: OBSOLETE - SEE PAGE 9-6 FOR NEW HPC™ PRODUCT NUMBERS.

- Mechanical Indicator** – protrudes when ground fault occurs.
- Field Adjustable Ground Fault Trip Point** – from 200 to 1100 amperes in six steps.
- Field Adjustable Ground Fault Delay Time** – min. (0.03 sec.) intermediate (0.20 sec.) and max. (0.50 sec.) delay time settings.
- No Trip Test Button** – permits ground fault system check without tripping switch.
- Test Button** – simulates an actual ground fault and will trip switch off unless "No Trip" button is depressed prior to pushing test button. Ground fault indicator will protrude when system is tested or when actual ground fault occurs.

**Note:** Although the integral ground fault function is self-powered, the test function does require an external 120Vac (200 volt amperes nominal) control power source.

# Disconnect Switches and Operating Mechanisms

## HPC™, New Generation High-Pressure Contact Switch

## Section 9

HPC™ Switch, New Generation

### How to Order

---

1. Determine your new HPC™ 15-digit part number by using the Configurator (contact your authorized GE Distributor) and refer to the Buylog™ for complete list of options.
2. Check EliteNet™ for price and availability (For access to EliteNet™, contact your authorized GE Distributor). Note: Because of multiple possible combinations, only product numbers that have been ordered are in EliteNet™. If the product number you are interested in is not in EliteNet™, email the request to **GE.1STOP\_REPLY@GE.com** to add it to the system.
3. Once the product number is loaded, the order can be placed via EliteNet™.
4. Note: Neutral CTs and T-Studs are ordered separately from the 15-digit product number.

# Disconnect Switches and Operating Mechanisms HPC™, New Generation High-Pressure Contact Switch

## Section 9

### Accessories - HPC™ Switch, New Generation

All devices UL Listed for factory or field installation except where noted.

#### Accessories

The complete line of new generation HPC™ switch accessories may be either factory or field installed to meet user needs. The electronic shunt trip, the bell alarm, the bell alarm with mechanical lockout, and the undervoltage release modules are drop-in from the front of the switch, interchangeable across all frames, and require no field internal wiring or switch disassembly. Auxiliary switch modules are available in groups of 4, 8 or 12, NO/NC single-pole, double-throw (SPDT) switches. Their installation simply involves removal of switch cover, installation of the switch module, routing of wiring and installation of the pre-wired terminal block and re-installation of the cover. Auxiliary switches are also interchangeable across all new generation HPC™ switch frames.

#### Electrical Operator

The electrical operator mounts inside the front cover of the manually operated switch. This accessory can be added to any new generation HPC™ switch in the factory or the field to provide electrical spring charging and charge indication. **For remote closing, the remote close solenoid must be ordered separately.** All switches are prewired to dedicated secondary terminals for easy field installation. When electrical operation is used, either a shunt trip or an undervoltage release must be ordered separately.

-	125	SPE125R	SPE125

Electrical Operator

#### Remote Close Solenoid

This accessory provides an electrically operated solenoid which, when energized, closes the switch. It is suitable for control interlock schemes in which manual closing capability would not be convenient or desirable. The switch is provided with a manual close button, which can be replaced by the Hidden "ON" Button accessory and/or sealed using the Limited Access Pushbutton Cover accessory. The remote close accessory is continuously rated and has an anti-pump feature, which prevents a motor operated switch from repeatedly closing into a fault. Closing control voltage must be removed and re-applied for each switch closure.

# Disconnect Switches and Operating Mechanisms HPC™, New Generation High-Pressure Contact Switch

## Accessories - HPC™ Switch, New Generation

All devices UL Listed for factory or field installation except where noted.

### Shunt Trip

The shunt trip accessory is an electronic module, which provides remote control capability to open the switch. When activated, the shunt trip module sends a signal to the control unit to open the switch. This allows the control unit to record, display, distinguish and communicate that the opening event was initiated by the shunt trip device. The shunt trip is continuously rated and requires no cut-off switch. When energized, the shunt trip supplies +24Vdc power to the control unit to power the display.

Shunt Trip Module

600	-	SPST600R <sup>1</sup>	SPST600 <sup>1</sup>

<sup>1</sup>Kit contains externally mounted transformer.

### Shunt Trip with Lockout Module

The shunt trip with lockout is identical to the regular shunt trip, but when energized, it will also prevent closure of an "open" switch by mechanically blocking both manual and electrical closing. When energized, the closing springs will not discharge, the movable contacts will not move; the contacts are "kiss free."

600	-	SPSTL600R <sup>1</sup>	SPSTL600 <sup>1</sup>

<sup>1</sup>Kit contains externally mounted transformer.

### Undervoltage Release Module

The undervoltage release is an electronic module used to open the switch when the monitored voltage drops below 35-60% of its rated value. The undervoltage release "resets" when the monitored voltage is re-established allowing the switch to re-close (the sealing voltage of the UVR is 60-85% of its rated voltage).

An undervoltage release trip operation is produced by the GTU control unit in response to a signal from the undervoltage release module. This allows the control unit to record, display, distinguish and communicate that the switch opening event was due to undervoltage release. Operation of the undervoltage release module will prevent switch contact closure, i.e. "kiss-free" operation. When energized, the undervoltage release supplies +24 Vdc power to the control unit to power the display.

Undervoltage Release Module

# Disconnect Switches and Operating Mechanisms HPC™, New Generation High-Pressure Contact Switch

## Section 9

### Accessories - HPC™ Switch, New Generation

All devices UL Listed for factory or field installation except where noted.

#### Blown Fuse Protector

The Blown Fuse Protector (factory installed) is an accessory which includes components mounted on and external to the new HPC™ switch. Control wiring is connected from one end of each fuse mounting bus-strap to a 6 pt. terminal block mounted on the side of the new HPC™ switch. A shunt trip Lockout device or UVR trip device is included based on the product numbers below for remote opening of the new HPC™ switch in the event of a blown fuse to avoid single phasing.

The accessory also includes a pin-wheel style Blown Fuse Detector equipped with 3 trigger fuses + 1 spare. Wiring from the pin-wheel device to the new HPC™ switch is the responsibility of the switchboard builder.

Ratings Vac	Factory Installed Product Number	Field Installable Product Number <sup>1</sup>	Trip Accessory Provided

208	BFSPST208AC	BFSPST208ACR	SPST208
240	BFSPST240AC	BFSPST240ACR	SPST240

<sup>1</sup>For field installable kits only, the Pin wheel style Blown Fuse Detector is not included due to UL accessory listing requirements.

Source the Boltswitch PW-2 Blown Fuse Detector separately and follow that manufacturer's instructions for mounting and use.

#### Bell Alarm (Alarm Only)

The bell alarm module is used to signal switch "tripped" status to other accessories (e.g., external alarm devices, indicating lights, relays, or logic circuits) for remote indication and interlocking functions. The bell alarm response is configurable by means of rear-mounted DIP switches on the control unit. The bell alarm can be made to operate in response to an overcurrent (including ground fault) or protective relay trip and/or a shunt trip operation, and/or operation of the undervoltage release module. It is not actuated as a result of normal switch "ON/OFF" operation.

This module provides a visual, mechanical pop-out target, which protrudes through the face of the switch door when it operates. The bell alarm may be reset manually by depressing the mechanical target, or automatically by closing the switch.

The bell alarm is provided with one SPDT switch with control power duty contacts as shown in the auxiliary switch accessories.

Bell (Alarm Only)

<sup>2</sup>600 Vac module not UL Listed.

# Disconnect Switches and Operating Mechanisms HPC™, New Generation High-Pressure Contact Switch

### Accessories - HPC™ Switch, New Generation

All devices UL Listed for factory or field installation except where noted.

#### Bell Alarm With Lockout

The bell alarm with lockout module combines both the bell alarm and a manual lockout function. The bell alarm switch operates identically to the standard bell alarm module, except that the mechanical pop-out target must be manually reset before the switch can be closed.

Operation of the bell alarm with lockout module can be independently set by means of setting the DIP switches at the rear of the control unit. Current rating of the single SPDT switch is identical to the auxiliary switch accessories.

Bell Alarm with Mechanical Reset Lockout

600	125-250	SPBAL600R <sup>1</sup>	SPBAL600 <sup>1</sup>

<sup>1</sup>600 Vac module not UL Listed.

#### Auxiliary Switch

An auxiliary switch signals the HPC™ switch's primary contact position (i.e., OPEN or CLOSED) to other devices, such as indicating lights, relays or logic circuits. This enables the user to provide remote indication, interlocking or control operations as a function of HPC™ switch primary contact position. The auxiliary switch operation is independent of the method by which the HPC™ switch is opened or closed. The auxiliary switch does not distinguish between a "tripped" or "open" condition. The auxiliary switch contacts follow the main HPC™ switch contacts on opening and precede them on closing.

Auxiliary switch modules are available with 4, 8 or 12 NO/NC (SPDT) switches for control power duty ac/dc ratings. When ordered for field installation, an auxiliary switch module comes pre-wired to its own terminal board, which mounts with one screw to the left of the HPC™ switch. All switch ratings are 6A at 120V-600 Vac, 1/2A at 125 Vdc and 1/4A at 250 Vdc.

### Accessories - HPC™ Switch, New Generation

All devices UL Listed for factory or field installation except where noted.

#### Key Interlock Provisions

The key interlock provision enables the user to mount a one- to four-cylinder, narrow-faced, Kirk-type FN or Superior customer-supplied lock on the face of the switch. This accessory provides mounting for key interlocks that are furnished by the customer. The key interlock provision works in conjunction with the padlock provision. The key interlock extends a lever through the padlock hasp when the key is turned to the key removal or bolt extended position. Additionally, the accessory provides a hasp for mounting three padlocks with 1/4" to 3/8" diameter shanks.

#### Key Interlock Reference Table

Product Number	Number of Locks	Kirk Key Lock Product Number	Superior Product Number

<sup>1</sup>Match neutral current sensor rating (or tap setting) to new HPC™ Switch sensor rating.

<sup>3</sup>At time of initial product release, the 1200A new HPC™ Switch was using 1600A installed sensors and a 1200A rating plug. Later models may or may not use 1200A phase sensors. Match Neutral sensor tap to HPC™ sensor rating.

# Disconnect Switches and Operating Mechanisms

## Premium Duty QMW, Heavy Duty QMR

## Section 9

Individual Components

30-200 Amperes

240, 480, 600 Vac, 250 Vdc

### Product Description

QMR and QMW switches (30-200 amperes), fuse and no-fuse kits are UL Recognized Components, File E-36152, and UL Recognized to Canadian safety requirements under the Component Recognition Program of Underwriters Laboratories Inc.

The 30-200 ampere fusible switches are UL Recognized for use on circuits capable of delivering not more than 200,000 rms symmetrical amperes at 240 or 600Vac when fused with Class R rated size fuses. Refer to the table 7-3 for the appropriate Class R Fusing Kit. They are suitable for use with Type STDA flange handles and variable depth operating mechanisms on page 9-28.

QMW Premium Heavy-Duty Switch  
(with Fuse Clips from Fuse Kit)

### Basic Switches - Premium Duty (QMW) and Heavy Duty (QMR)

Duty Type	Ampere Rating	Interrupting Rating Amperes Symmetrical 600Vac, 3-phase	Product Number
Premium Duty - QMW	30A	950	THMC31 <sup>1</sup>

THMC3465	400A, 600Vac	THMC34 or THMS34	NEC Standard and Class J	3	6-250 kcmil CU-AL

No-fuse ratings indicate switch capability as permitted by UL 508 (Ind. Cont. Equip.), additional hp ratings correspond to commercially available fuses.

For DC use outer poles.

<sup>1</sup>Can be used for one-step underfusing for next higher current-rated disconnect.

<sup>2</sup>Maximum UL listing 20 hp. at 600V.

Factory Assembled Fuse Clips  
Choice of Handle Style  
30-600 Amperes  
240, 480, 600 Vac, 250 Vdc

### Product Description

These 30-600 ampere disconnect switches are complete with Class H fuse clips except where noted, line/load lugs and handle operators, all factory assembled, and are mounted on a heavy-gauge steel backplate. They are UL Recognized Components, File E-36152, and UL Recognized to Canadian safety requirements under the Component Recognition Program of Underwriters Laboratories Inc.

The 30-200 ampere fusible switches are UL Recognized for use on circuits capable of delivering not more than 200,000 rms symmetrical amperes at 240 or 600Vac when fused with Class R rated size fuses. Refer to the table below for the appropriate Class R Fusing Kit. Class H Fuse Clips are standard. Suitable for NEMA 1 and NEMA 12 enclosures.

### Product Description

#### Type STDA Flange Handles and Variable Depth Operating Mechanisms For Use With QMR/QMW 30-200A Disconnects

- Designed to meet automotive duty specifications.
- NEMA 12/13 and 4/4X, UL Recognized Components, File E-57253, and UL Recognized to Canadian safety requirements under the Component Recognition Program of Underwriters Laboratories Inc.
- For right- or left-hand flange mounting—field convertible.
- Mounting dimensions to fit standard flange enclosures 8"-24" deep.
- Drilling templates and detailed installation instructions.

### Flange Handle Selection

Product Number STDA1 (6-inch) and STDA2 (10-inch) flange handles are interchangeable. While all operating mechanisms can be easily operated with the 6-inch STDA1 handle, the 10-inch STDA2 may be used to obtain lower operating force and/or to provide a proportionally larger handle on large enclosures.

Flange Handle, STDA1

### Construction Details

#### Flange Handles

- Rugged aluminum alloy cast housing with provision for locking in off position with up to three 3/16- to 5/16-inch diameter padlocks.
- Optional provision for locking on by drilling hole in die casting.
- O-ring seals for dust-tight/oil-tight duty.
- Gusseted, 3/32-in. thick double-sided steel handle with large, red-black self-extinguishing grade plastic grip.

#### Variable Depth Operating Mechanisms

- Plated steel yokes and integral mounting plates are 1/8-inch thick minimum.
- Operating yokes have toggle spring assist for positive on/off operation.
- Mounting plates include positive yoke stops to prevent undue wear on disconnect and circuit breaker toggle handles.
- Threaded 3/8-in. dia. drive rod (16-in. length—standard, 22-in. length—optional) provides simple variable depth connection between flange-mounted handle and operating mechanism.
- Suitable for use with Hoffman Bulletin A-25 or equivalent enclosures.

### Flange Handles

Enclosure Type	Nominal Length (Inches)	Installation Instruction Number	Drilling Template Number	Product Number

Break	3	1.5	1	0.8	0.2	0.1	–

#### Flange Stiffener Kit, Extended Drive Rod

Provides rigid 3/8-inch diameter rod between STDA handle mounting surface (flange or center mullion) and operating mechanism when STDA handle would otherwise not be rigidly supported.

Rod length is 22 inches and may be cut to appropriate length. Also used as extended length drive rod when standard 16-inch rod is not long enough.

Used With Operating Mechanism Product Number	Product Number
TDOM1A, 1B, TDOM2	TDSR

#### Extended Drive Stud

This optional drive stud permits locating the operating mechanism 1 5/16 inches further to the left (when flange handle is on right side) or to the right (when handle is on left side) to accommodate specific mounting restrictions.

Used With Operating Mechanism Product Number	Product Number
TDOM1A, TDOM1B, TDOM2	TDS1

#### Door Hardware, NEMA 12/12 and 4/4X

Type TDV door hardware provides sealing and interlocking of 3/4-inch nominal door depth hinged on left or right. Interlocking design requires use of screwdriver to release. When used with STDA flange handle and operating mechanisms, disconnect or circuit breaker cannot be turned on unless door and door hardware have been closed. For noninterlocking type, one bracket in kit is not used. Use of third-point latch recommended for doors 40 inches or longer.

Accessory Type	Description	Product Number
Door Hardware-Left Hinged	NEMA 12/13 two-point interlocking door hardware kit	TDV1
Door Hardware-Left Hinged	NEMA 4/4X two-point interlocking door hardware kit	TDV1X
Door Hardware-Left Hinged	Third-point latch kit for above	TDV3
Door Hardware-Right Hinged	NEMA 12/13 two-point interlocking door hardware kit	TDV1L
Door Hardware-Right Hinged	Third-point latch kit for above	TDV3L

#### Agency Certifications

STDA accessories are UL Recognized Components, File E-36152, and UL Recognized to Canadian safety requirements under the Component Recognition Program of Underwriters Laboratories Inc.

Auxiliary switch (SPDT) for HCI rated .5 ampere at 125Vdc, .25 ampere at 250Vdc, 15 ampere at 480Vac. Product Number 343L296G2.

HCI switches, fuse and no-fuse kits, are listed in UL "Recognized Component Index" (WHTY2) for mounting in a vertical position, line side up. UL File E-36152.

Line shield included with THC31 and THC31S. All other line shields included with fuse-clip or no-fuse kits.

For **Two-pole applications**—Use two poles of three-pole switch.

HCI switches, fuse and no-fuse kits, are listed in UL "Recognized Component Index" (WHTY2) for mounting in a vertical position, line side up. UL File E-36152.

Inside enclosure depth may be reduced to these depths while maintaining electrical spacings—requires cutting handle shaft.

<sup>1</sup>Suitable for 25 hp @ 600 V but not UL listed.

<sup>2</sup>Basic switch with UL 600 Volt industrial control spacings only.

<sup>3</sup>For 30 ampere switch with 600 Volt enclosed switch spacing and 60 ampere terminals, order Product Number THC31SSE.

Auxiliary switch (SPDT) for HCI rated .5 ampere at 125Vdc, .25 ampere at 250Vdc, 15 ampere at 480Vac. Product Number 343L296G2.

HCI switches, fuse and no-fuse kits, are listed in UL "Recognized Component Index" (WHTY2) for mounting in a vertical position, line side up. UL File E-36152.

Line shield included with THC31 and THC31S. All other line shields included with fuse-clip or no-fuse kits.

For **Two-pole applications**—Use two poles of three-pole switch.

HCI switches, fuse and no-fuse kits, are listed in UL "Recognized Component Index" (WHTY2) for mounting in a vertical position, line side up. UL File E-36152.

Inside enclosure depth may be reduced to these depths while maintaining electrical spacings—requires cutting handle shaft.

<sup>1</sup>Suitable for 25 hp @ 600 V but not UL listed.

<sup>2</sup>Basic switch with UL 600 Volt industrial control spacings only.

<sup>3</sup>For 30 ampere switch with 600 Volt enclosed switch spacing and 60 ampere terminals, order Product Number THC31SSE.

#### TDR Integral Handle Mechanism for QMR/QMW Disconnects

- Rotary operating handle mounts directly to disconnect.
- Operates through enclosure door—mechanical interlock designed to prevent unauthorized opening of enclosure when disconnect is ON.
- Locking hasp accommodates up to three padlocks.
- Suitable for use with NEMA 1, 12, and 12K enclosures.
- UL Recognized Components, File E-36152.

### Door Mounted Rotary Operating Handles NEMA Type 1/12/4/4X (IP65)

Switch Type	Color	Comments	Product Number
FD130 or FD160	Black	NEMA 4, 4X, with defeat to enable panel entry while power on.	FD1HA4XB
FD130 or FD160	Red/Yellow	NEMA 4, 4X, with defeat to enable panel entry while power on.	FD1HA4XRY
FD1100 or FD1200	Black	NEMA 3R, simple on/off pistol grip handle	FD11HA1B
FD1100 or FD1200	Red/Yellow	NEMA 3R, simple on/off pistol grip handle	FD11HA1RY
FD1100 or FD1200	Black	NEMA 3R, on/off with lock-out tag-out pistol grip handle	FD11HA4B
FD1100 or FD1200	Red/Yellow	NEMA 3R, on/off with lock-out tag-out pistol grip handle	FD11HA4RY
FD1100 or FD1200	Black	NEMA 3R, on/off with lock-out tag-out and defeatable pistol grip handle	FD11HA3B
FD1100 or FD1200	Red/Yellow	NEMA 3R, on/off with lock-out tag-out and defeatable pistol grip handle	FD11HA3RY

Pistol Grip Operating Handle

Rotary Operating Handle

### Operating Shafts

Switch Type	Handle Type	Enclosure Depth (Max.)	Shaft Length	Product Number
FD130 or FD160	FD1HA4X	10 15/64 (260)	166mm or 6 17/32in.	FD1S166
FD130 or FD160	FD1HA4X	17 7/8 (454)	360mm or 14 11/64in.	FD1S360
FD1100 or FD1200	FD11HA	11 21/38 (296)	200mm or 7 7/8in.	FD1S12
FD1100 or FD1200	FD11HA	16 15/64 (430)	319mm or 12 19/32in.	FD1L12

Operating Shafts

### Auxiliary Switches

Switch Type	Description	Contact Configuration	Location	Product Number
FD130, FD160, FD1100 or FD1200	SPDT	NO	First	FD1ASNO1
FD130, FD160, FD1100 or FD1200	SPDT	NC	First	FD1ASNC1
FD130, FD160, FD1100 or FD1200	SPDT	NO	Second	FD1ASNO2
FD130, FD160, FD1100 or FD1200	DPDT	2 NO	First	FD1ASNO11
FD130, FD160, FD1100 or FD1200	DPDT	2 NC	First	FD1ASNC11
FD130, FD160, FD1100 or FD1200	DPDT	2 NO	Second	FD1ASNO22

Auxiliary Switch with Terminal Shields

### Accessories

#### Other Accessories

Accessory Type	Switch Type	Comments	Product Number
Terminal Shields	FD130	Terminal shield for line or load side. One shield supplied with switch as standard.	FD130TS
Terminal Shields	FD160	Terminal shield for line or load side. One shield supplied with switch as standard.	FD160TS
Terminal Shields	FD1100	Terminal shield for line or load side. One shield supplied with switch as standard.	FD1100TS
Terminal Shields	FD1200	Terminal shield for line or load side. One shield supplied with switch as standard.	FD1200TS
Shorting Links	FD130	Package of 3. Use as replacements in FD130NF and FD160NF.	FD130LNK
Shorting Links	FD160	Package of 3. Use as replacements in FD130NF and FD160NF.	FD160LNK
Shorting Links	FD1100	For non-fused applications.	FD1100LNK
Shorting Links	FD1200	For non-fused applications.	FD1200LNK
Fuse Covers	FD130CC	-	FD130CV1
Fuse Covers	FD130J	-	FD130JCV1
Fuse Covers	FD160J	-	FD160JCV1
Fuse Covers	FD160NF	-	FD160NF
Fuse Covers	FD1100	-	FD1100JCV1
Fuse Covers	FD1200	-	FD1200JCV1
Auxiliary Switch	All	Package of 2.	FD1ASCV1
Terminal Shields
