Beautiful warm white light effects with LED

To classify the different types of white light, the term color temperature is applied. This color temperature is measured in Kelvin (K). The lower the Kelvin number, the warmer the color temperature (more yellow-red). The higher the number, the cooler the color temperature (more white-blue). Warm white light is standard for creating a cozy atmosphere at home.

Forecast introduces the latest generation of warm white LEDs reaching a color temperature of 2700 Kelvin. This innovation brings LED lighting to the next level, combining elegance, ambience creation and energy efficiency in one luminaire.

Balancing design innovation with sustainability

Designing around a new light source

With enhanced flexibility to create beautifully designed fixtures around a virtually invisible bulb or light source, our in house designers have risen to the challenge to construct unique lighting solutions without compromising the Forecast brand style. Ultimately, the Philips Lumileds® LED technology in the Forecast portfolio marries function with fashion resulting in a piece of artwork that just happens to generate light. Timeless, naturally inspired design with refreshing light that will allow you and your home to look good, while feeling good about your efficient lighting choice.

What is an LED?

An LED is a light emitting diode, a small energy efficient light source enabling designs that were not possible with an incandescent bulb.

What type of LED is used in the Forecast portfolio?

The LED modules used by Forecast are a uniquely developed solution by Philips combining 3 Philips Lumileds® Luxeon Rebels in a synthetic and aluminum housing. This module, known as a "puck" enables an optimal light output.

What are the advantages of the Philips LED technology?

The Philips Lumileds® pucks feature consistent light color temperature of 2700 K with a color rendering index (CRI) of 85 for optimal color and 350 lumens of light output with the greatest efficiency over a lifespan of 20 years, and feature dimmability with a trailing edge low-voltage electronic dimmer.

Compact fluorescent lamps are a fantastic way to save money as well as lessen environmental impact. Millions are sold but many buyers discover too late that the technology does not replace the old incandescent bulb in one important regard - the ability to dim.
Second, many of these retrofit compact fluorescent lamps are rather bulky. The larger size causes many of these lamps to protrude from downlights and lampshades in a most unpleasant manner.
Finally, most retrofit compact fluorescent lamps are designed to operate only in a lamp base down position. This makes them ideal for table lamps but not for use in decorative pendant and downlights that require an inverted socket position.

Forecast is pleased to offer dimmable compact fluorescents that operate beautifully in either base up or base down position.

- Same size as typical A-19 incandescent
- 2750 Color temperature mimics incandescent, 82 CRI
- Dimmable lamps will operate on most incandescent dimmers[1]
- Lamps utilize amalgam technology to operate in any position, including inverted
- Lamps are constructed with glass diffusers for enhanced visual comfort
- 8,000 hours average life.
