SOLUTIONS

CONNECTIVITY

As the industry leader in structured wiring, Legrand provides the proven, practical solutions preferred by installers and major home builders across the country. Our comprehensive product offering — which includes On-Q wall plates, jacks, straps, tools, modules and enclosures — simplifies installations and reduces time on site. We specialize in meeting the right specifications for any project — residential or light commercial — with solutions that exceed your needs. From single-family homes to apartments, townhomes to condominiums, Legrand has the professional answer for any project.

HDMI

This full line of High-Speed HDMI with Ethernet products — which includes cables, couplers, repeaters and extenders — delivers an unparalleled HD audio and video experience. All of our HDMI cables are CL-3 and in-wall UL-rated.

WALL PLATES & INSERTS

Our line of Keystone wall plates; Cat 5e, Cat 6, Cat 6a, F Connectors; speaker binding posts; and RCA inserts provides flexible setup options anywhere in the home.

DECORATOR STRAPS

We offer a series of pre-configured outlet straps for data, phone, video and home theater applications. Add a home theater strap to enable HD audio and video with a few simple connections, or quickly wire a home office using our pre-configured outlet straps that combine phone, data and video into a single decorator opening.

ENCLOSURES

Our durable enclosures range in size from 12 to 42 inches to suit any installation. Every enclosure is made in the USA and is compatible with all major module mounting schemes. They offer three 2.5 inch top openings for high capacity projects, as well as side lances and tabs for greater flexibility during installation. Available with hinged or screw-on doors, an On-Q enclosure is the easy choice for professional projects.

NETWORKING CABLE REFERENCE GUIDE

CAT 3 was a popular cabling format for computer network administrators in the early 1990s. It was superseded when Cat 5 became standardized because of its higher performance. It is used only in two-line phone systems.

CAT 5 was developed to support faster 100BaseT Ethernet standards. When Gigabit Ethernet (1000BaseT) standards were introduced, the Cat 5 cable became vulnerable to crosstalk, which caused interference and signal loss within the transmission.

CAT 5e superseded Cat 5 in 1999. It was designed to reduce crosstalk when transmitting 1000BaseT Ethernet. The "e" in Cat 5e stands for "enhanced". It is the most widely used cable in residential installations today.

CAT 6 was designed to transmit 1000BaseT at Gigabit speeds. Cat 6 is a wider cable than Cat 5e with more twists within its pairs to reduce crosstalk. Cat 6 can also be used in shorter runs for 10GBaseT Ethernet, but is vulnerable to alien crosstalk in a crowded cable environment.

CAT 6a was designed to transmit 10GBaseT, even in commercial environments. Cat 6a defends against alien crosstalk, which is crosstalk between cables in a crowded installation. The "a" in Cat 6a stands for "augmented".

WHAT'S THE DIFFERENCE BETWEEN BITS AND BYTES?

Network speeds are typically calculated in Bits, while files are calculated in Bytes. A Byte is 8 Bits.
WHY ARE NETWORKING CABLES TWISTED?

The twists in a cable are meant to defend against crosstalk on the line. The physics of this phenomenon are complex, but the twists prevent the signal running on one twisted pair in the cable from jumping to another twisted pair, causing interference.
