FERRAZ SHAWMUT IS NOW MERSEN

MERSEN

Fuses | Fuse Blocks & Holders | Power Distribution Blocks | Surge Protection Devices
Circuit Protection Accessories | Disconnect Switches | Heatsinks & Cooling Systems | High Power Switches

The Advisor

More Products. More Resources. More For You Than Ever Before.

A Different Kind of Advisor

A lot has changed with this latest edition of the Advisor. You'll find 756 additional products including, high power switches, heatsinks and cooling, medium voltage fuses, surge protection devices, and our new Helio Protection fuse line.

There's a new Resources & Tools section with time-saving services like electrical services and the Fuse Control™ program, as well as handy tools like Select-A-Fuse software®, Protection Intelligence Quotient Quizzes, and R-Tools®, our online 3D heatsink thermal modeling tool.

In an effort to produce a more “green” catalog, we've done more with less. There are more products, but fewer pages. Product performance data (time current curves, peak let thru data, etc.) has been moved out of the catalog and onto our website. Our goal was two-fold, to print a leaner catalog and provide a method for ensuring that you have the most up-to-date data available at any given time. As part of our on-going sustainability initiatives we also took great care in selecting a more environmentally-friendly paper stock. The results — a more streamlined, information packed catalog than ever before!

Your Trusted Advisor

You've come to rely on the Advisor for advice. Advice on choosing the right fuse for the application. On coordinating it with upstream and downstream devices. On heatsink configurations. On complying with international standards. On selecting the right surge protection. And on a whole range of other complicated electrical protection and business issues.

A Team of Advisors Dedicated to Your Field

You can rest easy knowing a team of experts is ready to help you work through the application challenges you face. Our experts have extensive experience in product-specific disciplines including:

Power Controls – LV/MV motor control centers, control panels, HVAC, and material handling

Power Electronics – Drives, soft starters, UPS, rectifiers, inverters, frequency converters, induction heating, rail propulsion, and welding

Power Transmission & Distribution – Switchgear, switchboards, panelboards, load centers, PF correction, surge protection, rail current collection, rail grounding

Power Low Voltage Distribution – Substations, transformers, transmission lines, PF correction

Expert Advice When You Need It

Mersen expertise extends out into the field and into the world at large. For a complete listing of our North American sales offices, global manufacturing, and technical services support contacts visit us at:

Your problem: You need maximum overcurrent protection to prevent costly damage to today's highly sensitive motor and electrical-system components. That way, plant shutdowns, replacement costs, and repair bills are kept to an absolute minimum.

Our solution: By opening in less than 1/4 cycle under short circuit conditions, Amp-Trap 2000 fuses current limit enough to prevent undue downstream damage – and therefore comply with the extra-stringent IEC, Type-2 standard. In addition to being the industries most current-limiting fuses, the time-delay feature allows for motor starting and transformer inrush current without nuisance opening adding to the reliability and longevity of your electrical system.

Want more information fast? For more technical or application-specific information, please call our Amp-Trap 2000 experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

Amp-Trap 2000® Fuses

FOR TYPE 2, NO
DAMAGE CIRCUIT
PROTECTION IN ALL
THE CONFIGURATIONS
YOU NEED.

- Class J / AJT. A2
- AJT Reducer Fuses A4
- Class L / A4BQ. A6
- Class RK1 / A2D-R & A6D-R . . A8

- Class CC / ATQR A12

AJT

Time-delay/Class J

AMP-TRAP 2000® FUSES

SMARTSPOT® WITH MAXIMUM CIRCUIT PROTECTION

Amp-Trap 2000® SmartSpot AJT fuses now provide a visual open fuse indicator. With advanced material technology the AJT fuse provides IEC Type 2 No Damage protection to main, feeder, and branch circuits, for all types of loads — yet, they require only half the mounting space needed for 600VAC Class RK fuses. AJT's time-delay characteristics are ideal for handling typical motor and transformer inrush currents, while also providing superior current-limiting ability.

FEATURES/BENEFITS:

- Solid state SmartSpot visual blown fuse indicator
- Time-delay for motor starting and transformer inrush
- 300kA interrupting rating - self-certified, UL witnessed tests
- Extremely current-limiting for low peak let-thru current
- Most current-limiting UL class fuse
- Recommended for Arc Flash energy reduction
- Small footprint requires less mounting space and allows smaller, more economical fuse blocks
- Easy 2-to-1 selectivity for prevention of nuisance shutdowns
- Unique Class J dimensions prevent replacement errors
- High-visibility orange label gives instant brand recognition
- Metal-embossed date and catalog number for traceability and lasting identification
- Fiberglass body provides dimensional stability in harsh industrial settings
- High-grade silica filler ensures fast arc quenching
- Optional EI indicator/switch mount for AJT70 to 600 open fuse indication

RATINGS:

- **Volts:** 600VAC or less, 500VDC or less
- **Amps:** 1 to 600A
- **IR:** 200kA I.R. AC, 100kA I.R. DC (Self-certified for 600VAC, 300kA I.R., UL witnessed).

APPROVALS:

AJT (1-600):

- UL listed to standard 248-8 File E2137
- DC listed to UL standard 248
- CSA certified to standard C22.2 No. 248.8
- IEC 269-2-1

AJT (70-600) EI:

- UL listed
- DC tested to UL standard 248

APPLICATIONS:

- Motor circuits
- Mains
- Feeders
- Branch circuits
- Lighting, heating & general loads
- Transformers
- Control panels
- Circuit breaker back-up
- Bus duct
- Load centers

AJT Reducer Fuses

Time-delay/Class J

AMP-TRAP 2000® FUSES

DECREASE YOUR CURRENT RATING WITHOUT USING A FUSE REDUCER

AJT Reducer Fuses are a safe permanent solution for decreasing your current rating without using a fuse reducer which are designed and list for temporary use only. These reducer fuses provide the same trusted protection levels as a traditional AJT fuses but in a larger body.

FEATURES/BENEFITS:

- Replaces traditional temporary use only fuse reducers
- Recommended for Arc Flash energy reduction
- Extremely current-limiting for low peak let-thru current
- Most current-limiting UL class fuse
- Time-delay for motor starting and transformer inrush
- High-visibility orange label gives instant brand recognition
- Metal-embossed date and catalog number for traceability and lasting identification
- Fiberglass body provides dimensional stability in harsh industrial settings
- High-grade silica filler ensures fast arc quenching
- Optional EI indicator/switch

HIGHLIGHTS:

- Reducer Fuse
- Arc Flash mitigating
- Highly current-limiting
- Time-delay
- DC ratings
- Optional mechanical indicator

RATINGS:

Volts: 600VAC or less, 500VDC or less

Amps: 125 to 200A (in 400A body), 250 to 400A (in 600A body)

IR: 200kA I.R. AC, 100kA I.R. DC (Self-certified for 600VAC, 300kA I.R., UL witnessed).

APPROVALS:

AJT (1-600):

- UL listed to standard 248-8 File E2137
- IEC 269-2-1

APPLICATIONS:

- Motor circuits
- Mains
- Feeders
- Branch circuits
- Lighting, heating & general loads
- Transformers
- Control panels
- Circuit breaker back-up
- Bus duct
- Load centers

Note: See motor fuse applications tables on page P7

A4BQ

Time-delay/Class L

AMP-TRAP 2000® FUSES

PUT THE HIGHEST CURRENT-LIMITATION...
AT YOUR SERVICE

Amp-Trap 2000® A4BQ fuses are 20% more current-limiting than any other Class L fuse on the market. When correctly coordinated, they bring a superior level of protection to service entrance equipment. Downstream circuit components have maximum protection against short circuit let-thru current. A4BQ's built-in, 4-second time-delay characteristic (at 500% of rated current) accommodates harmless inrush currents without nuisance opening.

FEATURES/BENEFITS:

- Fastest operation under short circuit conditions: Let-thru currents are typically 20% lower, with a corresponding let-thru energy (clearing I^2t) up to 40% lower than the next fastest Class L fuse
- Time-delay for high inrush loads such as motors and transformers, without nuisance opening
- 300kA interrupting rating - self-certified, UL witnessed tests
- Most current-limiting for lowest peak let-thru current; even at fault currents up to 300kA
- Recommended for Arc Flash energy reduction
- Pure silver links ensure lowest let-thru current and longer fuse life
- Easy 2-to-1 selectivity for prevention of nuisance shutdowns and "blackouts"
- Rejection-style design prevents replacement errors
- High-visibility orange label gives instant brand recognition
- Reduced inventory because A4BQ can replace all older types of Class L fuses now in-service (continued on next page)

RATINGS:

Volts: 600VAC, 500VDC

Amps: AC - 100 to 6000A,
DC - 100 to 3000A

IR: 200kA I.R. AC, 100kA I.R. DC
(Self-certified for 600VAC, 300kA I.R., UL witnessed).

APPROVALS:

A4BQ (100-6000)

- UL listed to standard 248-10 File E2137
- DC listed to UL standard 248 (100-2000A)
- CSA certified to standard C22.2 No. 248.10 (601-6000A)

A4BQ (100-6000) - TA

- UL listed

APPLICATIONS:

- Mains
- Feeders
- Large motors
- Lighting, heating & general loads
- Circuit breaker back-up
- DC rated: UPS DC links, battery disconnects, other DC applications

FEATURES/BENEFITS (CONTINUED):

- Metal-embossed date and catalog number for traceability and lasting identification
- Fiberglass body provides dimensional stability in harsh industrial settings
- High-grade silica filler ensures fast arc quenching
- Optional mechanical TA indicator (100-6000A). Please contact factory for special trigger actuator

Safety Note: Class L fuses are dimensioned for one-way interchangeability.
A Class L fuse of any lower ampere rating can be substituted for a given Class L fuse.

A2D-R & A6D-R

Time-delay/Class RK1

AMP-TRAP 2000® FUSES

UPGRADE YESTERDAY'S CIRCUITS TO
TODAY'S TYPE 2 PROTECTION

The Amp-Trap 2000® SmartSpot® A2D-R and A6D-R fuses feature a visual open fuse indicator and provide IEC Type 2 No Damage protection to main, feeder, and branch circuits for all types of loads. With time-delay characteristics for handling harmless in-rush currents, current-limiting ability and a wide range of ratings (from 1 to 600 Amperes), A2D-R and A6D-R fuses give excellent protection for all your applications.

FEATURES/BENEFITS:

- Solid state SmartSpot visual blown fuse indicator
- Time-delay for motor starting and transformer inrush currents without nuisance opening
- 600VAC & 600VDC dual rated
- 300kA interrupting rating - self-certified, UL witnessed tests
- Extremely current-limiting for low peak let-thru current
- Recommended for Arc Flash energy reduction
- Easy 2-to-1 selectivity for prevention of nuisance shut downs and “black outs”
- Rejection-style design prevents replacement errors (when used with recommended fuse blocks)
- High-visibility orange label gives instant brand recognition
- Reduced inventory by taking the place of class RK5, K, and H fuses
- Metal-embossed date and catalog number for easier traceability and lasting identification
- Fiberglass body provides dimensional stability in harsh industrial settings

RATINGS:

A2D-R

Volts: 250VAC/DC

Amps: 1/10 to 600A (AC), 15 to 600A (DC)

IR: 200kA I.R. AC, 100kA I.R. DC

A6D-R

Volts: 600VAC/DC

Amps: 1/10 to 600A

IR: 200kA I.R. AC, 100kA I.R. DC
(Self-certified for 300kA I.R., UL witnessed.)

APPROVALS:

- UL listed to standard 248-12 File E2137
- DC listed to UL standard 248
- CSA certified to standard C22.2 No. 248.12

APPLICATIONS:

- Motors
- Safety switches
- Transformers
- Branch circuit protection
- Disconnects
- Control panels
- All general-purpose circuits

Note: See motor fuse applications tables on page P7

ATDR

Time-delay/Class CC

AMP-TRAP 2000® FUSES

THE BEST PROTECTION FOR TODAY'S SMALL MOTORS

Amp-Trap 2000® ATDR small-dimension fuses can provide IEC Type 2 No Damage protection to your facility's increasingly sensitive branch circuit components and small motors - minimizing the risk of fault-related damage. ATDR Class CC fuses deliver the best time-delay characteristics in their class with excellent cycling ability for small motor loads.

FEATURES/BENEFITS:

- Time-delay for motor starting inrush currents without nuisance opening
- Highly current-limiting for low peak let-thru current
- Improved cycling ability for frequent motor starts/stops without nuisance fuse opening
- Rejection-style design prevents replacement errors (when used with recommended fuse blocks)
- High-visibility orange label ensures instant brand recognition, simplifies replacement
- Metal-embossed date and catalog number for traceability and lasting identification
- Fiberglass body provides dimensional stability in harsh industrial settings
- High-grade silica filler ensures fast arc quenching and optimum current-limitation

RATINGS:

Volts: 600VAC, 300VDC

Amps: 1/4 to 30A

IR: 200kA I.R. AC, 100kA I.R. DC

APPROVALS:

- UL listed to standard 248-4 File E2137
- CSA certified to standard C22.2 No. 248.4
- DC listed to UL standard 248

APPLICATIONS:

- Small motors
- Contactors
- Lighting, heating & general loads
- Branch circuit protection

Note: See motor fuse applications tables on page P7

HIGHLIGHTS:

- Time-delay
- Best choice for small motor protection
- Highly current-limiting
- AC & DC rated

ATQR

Time-delay/Class CC

AMP-TRAP 2000® FUSES

TAKE CONTROL OF FAULT CURRENTS HEADED FOR YOUR CONTROL TRANSFORMER

ATQR small-dimension fuses feature time-delay characteristics ideally suited for the high inrush currents of control transformers, solenoids, and similar inductive loads. Mersen's ATQR fuses provide superior protection for the branch circuits of electrical distribution systems.

FEATURES/BENEFITS:

- Time-delay for control transformer inrush loads without nuisance opening
- Highly current-limiting for low peak let-thru current
- Rejection-style design prevents replacement errors (when used with recommended fuse blocks)
- High visibility orange label ensures instant brand recognition, and simplifies replacement
- Metal-embossed date and catalog number for traceability and lasting identification
- Fiberglass body provides dimensional stability in harsh industrial settings
- High-grade silica filler ensures fast arc quenching and high current limitation

HIGHLIGHTS:

- Time-delay
- Best choice for small transformer protection
- Current-limiting

RATINGS:

Volts: 600VAC (1/10-30A),

DIMENSIONS

Your problem: Today, you need a time-delay power fuse that can handle normal surges. Tomorrow, it's a power fuse with a high interrupting rating and the added security of rejection dimensions. The day after that, one of those economical one-time power fuses will do the trick. But where can you turn for all three?

Our solution: Mersen's comprehensive power fuse offering covers a complete range of applications and a complete range of circuit-protection needs. Whether it's the characteristics of our Tri-Onic® Time-delay fuses. The high current-limiting capacity of our original Amp-Trap® power fuses. The cost-efficient protection of our One-Time fuses. Or some other application-specific power fuse solution.

Want more information fast? For more technical or application-specific information, please call our power fuse experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

NORTH AMERICAN POWER FUSES

THE INDUSTRY'S MOST POPULAR FUSE FOR MOTOR CIRCUIT PROTECTION

With advanced material technology added to the existing product, the Tri-Onic® TR and TRS current-limiting time-delay fuses are engineered for overcurrent protection of motors and transformers, service entrance equipment, feeder and branch circuits. Tri-Onic fuse's proven time-delay characteristic safely handles harmless starting currents and inrush currents associated with today's motors and transformers. Now available with optional SmartSpot® blown fuse indication technology.

FEATURES/BENEFITS:

- Time-delay
- Current-limiting
- AC & DC rated
- Optional solid state SmartSpot blown fuse indicator
- Time-delay for motor start-ups and transformer inrush currents without nuisance opening
- Current-limiting for low peak let-thru current
- Rejection-style design prevents replacement errors (when used with recommended fuse blocks)
- Easy-to-read label for quick brand recognition and replacement
- Metal-embossed date and catalog number for traceability and lasting identification
- Fiberglass body provides dimensional stability in harsh industrial settings
- High-grade silica filler ensures fast arc quenching and high current limitation

RATINGS:

TR-R

TRS-RDC

Time-delay/Class RK5

NORTH AMERICAN POWER FUSES

DC RATED FOR TOUGH DC APPLICATIONS

The Tri-Onic® DC fuse series is designed for DC circuit protection in surface and underground mines. The TRS-RDC is MSHA approved and meets the industry's most severe third party requirements for 600VDC rated fuses. The TRS-RDC is a time-delay fuse with essentially the same time-current characteristic as the standard Tri-Onic fuse.

FEATURES/BENEFITS:

- DC rated for mine duty and other long time-constant applications
- Time-delay for motor start-ups and high inrush loads without nuisance opening
- Rugged glass melamine body for superior reliability in harsh environments

RATINGS:

- **Volts:** 300VDC (0.1 to 30A); 600VDC (35 to 400A)
- **Amps:** 1/10 to 400A
- **IR:** 20kA I.R. DC

**consult factory for availability*

HIGHLIGHTS:

- Time-delay
- DC rated

APPLICATIONS:

- Mine circuits
- Trailing cables
- Pump motors
- Rail heaters

APPROVALS:

- MSHA approval no. 28-26-0

HSJ

High Speed/Class J

NORTH AMERICAN POWER FUSES

PROTECT YOUR WIRING AND POWER SEMICONDUCTORS WITH A SINGLE FUSE

The High Speed J (HSJ) fuse combines the low I^2t of a semiconductor fuse and the branch circuit performance of a Class J UL listed fuse. This fuse was designed for the starting characteristics of solid state motor controllers. The HSJ can provide branch circuit protection per NEC requirements, as well as very low I^2t for protection of power semiconductors such as Diodes, SCRs, GTOs and SSRs.

FEATURES/BENEFITS:

- Optimized over-load capability for withstanding elevated levels of current during electronic motor controller starts
- Low I^2t (low thermal energy)
- Excellent cycling ability for frequent starts/stops without nuisance opening

RATINGS:

- **Volts:** 600VAC, 500VDC
- **Amps:** 1 to 600A (AC), 15 to 600A (DC)
- **IR:** 200kA I.R. AC, 100kA I.R. DC, L/R =10mS or less (Self Certified for 600VAC, 300kA I.R., UL witnessed.)

HIGHLIGHTS:

- Current-limiting
- AC & DC ratings
- Low I^2t
- Compact size

APPLICATIONS:

- Branch circuits
- Control panels
- Electronic motor controllers
- Phase controllers
- Drives
- Soft-starters
- Solid state relays

APPROVALS:

- UL listed to standard 248-8 File E2137
- CSA certified to standard C22.2 no. 248.8
- DC listed to UL 248

A4J

Fast Acting/Class J

NORTH AMERICAN POWER FUSES

FOR EXCELLENT CURRENT-LIMITING PROTECTION

A4J Class J fuses deliver excellent current-limiting protection to a wide variety of applications. Their unique dimensions prevent the substitution of other fuses with lower voltage ratings, interrupting ratings, or current-limiting capability.

FEATURES/BENEFITS:

- High current limitation for low peak let-thru current
- Unique dimensions prevent replacement by other fuse classes
- Fiberglass body provides dimensional stability in harsh industrial environments
- Easy-to-read imprint label for quick recognition and replacement

RATINGS:

- **Volts:** 600VAC, 300VDC
- **Amps:** 1 to 600A
- **IR:** 200kA I.R. AC, 100kA I.R. DC

HIGHLIGHTS:

- Fast-acting
- Very current-limiting
- DC ratings

APPLICATIONS:

- Capacitors
- Load centers
- Panelboards
- Switchboards
- Bus duct
- Feeder circuits
- Circuit breakers
- Lighting, heating, and general loads

APPROVALS:

- UL listed to standard 248-8 File E2137
- CSA certified to standard C22.2 no. 248.8
- DC listed to UL 248
- IEC 269-2-1

A4BY

Class L

NORTH AMERICAN POWER FUSES

COUNT ON THE HIGH INTERRUPTING RATING
OF OUR MOST WIDELY USED CLASS L FUSE

When it comes to protecting service entrance equipment, feeder circuits, and circuit breakers, A4BY fuses are the industry's favorite. The A4BY is a 100% rated device and may be applied at continuous currents up to its ampere rating. A 4-second minimum time-delay at 500% rating allows the A4BY to pass normal current surges and to coordinate with ground fault relays.

FEATURES/BENEFITS:

- Unique dimensions prevent replacement by other fuse classes
- Blade stamped catalog numbers for permanent identification
- Glass melamine body and plated terminals provide superior reliability in harsh environments

RATINGS:

- **Volts:** 600VAC, 300VDC
- **Amps:** 200 to 6,000A (AC), 200 to 2,500A (DC)
- **IR:** 200kA.I.R. AC, 100kA I.R. DC

HIGHLIGHTS:

- Current-limiting
- 4-second time-delay
- DC ratings
- Uniform characteristics in all ampere ratings

APPLICATIONS:

- Mains, feeders
- Circuit breakers
- Load centers
- Panelboards
- Switchboards
- Metering centers

APPROVALS:

- UL listed to standard 248-10 (601-6000A) File E2137
- CSA certified to standard C22.2 No. 248.10 (601-6000A)
- Self-certified for DC per UL248 (601-6000A)

A4BT

Time-delay/Class L

NORTH AMERICAN POWER FUSES

WHEN YOUR HEAVIER LOADS NEED PROTECTION,
A4BT FUSES WON'T LET YOU DOWN

The high interrupting rating of A4BT current-limiting fuses is ideally suited for protecting mains, feeders, and general circuits. The 10-second time-delay at 500% of fuse rating is ideal for large motors and other loads with a high inrush. A4BT fuses are suitable for DC applications up to 500VDC. An A4BT fuse can be applied to normal loads up to its full ampere rating to allow 100% rating of equipment, while also providing superior current-limiting ability.

FEATURES/BENEFITS:

- Unique dimensions prevent replacement by other fuse classes.
- Blade-stamped catalog numbers for permanent identification
- Glass melamine body and plated terminals provide superior reliability in harsh environments

RATINGS:

- **Volts:** 600VAC, 500VDC
- **Amps:** 200 to 2,000A
- **IR:** 200kA I.R. AC, 100kA I.R. DC

HIGHLIGHTS:

- Current-limiting
- Full 10-second delay
- DC ratings
- Uniform characteristics in all ampere ratings

APPLICATIONS:

- Motors
- Motor controllers
- Transformers
- Mains
- Feeders

APPROVALS:

- UL Listed to standard 248-10 (601-2000A) File E2137
- CSA Certified to standard C22.2 No. 248.10 (601-2000A)

A3T & A6T

Fast Acting/Class T

NORTH AMERICAN POWER FUSES

THESE SMALL DIMENSION FUSES ARE
THE RIGHT FIT... FOR A TIGHT FIT

Fast-acting A3T and A6T Class T fuses combine two highly desirable features - high current limitation and a small physical size. Their unique dimensions prevent the substitution of other fuses with lower voltage ratings or current-limiting capability.

These fuses have glass melamine bodies for superior dimensional stability and catalog numbers stamped into the blades for permanent identification.

FEATURES/BENEFITS:

- Extremely current-limiting for low peak let-thru current
- Unique dimensions prevent replacement by other fuse classes
- Blade-stamped catalog numbers for permanent identification
- Small physical size for greater design flexibility

RATINGS:

A3T

A2K-R & A6K-R

Fast Acting/Class RK1

NORTH AMERICAN POWER FUSES

THESE FAST-ACTING FUSES DELIVER A HIGH DEGREE OF CURRENT LIMITATION WHERE YOU NEED IT MOST

Current-limiting A2K and A6K fuses provide excellent protection where high available short circuit currents exist. These fast-acting fuses are particularly good for branch/feeder circuits and back-up protection.

FEATURES/BENEFITS:

- Rejection style design prevents replacement by other fuse classes
- Fiberglass body provides dimensional stability in harsh industrial environments
- Easy-to-read imprint label for quick recognition and replacement
- High degree of current limitation for low peak let-thru current

RATINGS:

A2K

- **Volts:** 250VAC / DC
- **Amps:** 1 to 600A
- **IR:** 200kA I.R. AC, 20kA I.R. DC

A6K

- **Volts:** 600VAC / 300VDC
- **Amps:** 1 to 600A
- **IR:** 200kA I.R. AC, 20kA I.R. DC

HIGHLIGHTS

- Highly current-limiting
- Fast-acting
- Rejection style

APPLICATIONS:

- Loadcenters
- Panelboards
- Switchboards
- Bus duct
- Feeder circuits
- Non-inductive loads
- Lighting circuits

APPROVALS:

- UL listed to standard 248-12
File E2137
- CSA certified to standard
C22.2 No. 248.12
- Self-certified for DC per UL248

AG

Class G

NORTH AMERICAN POWER FUSES

AMP-TRAP® AG FUSES FIT RIGHT IN TO A WIDE VARIETY OF INDUSTRIAL APPLICATIONS

The Mersen Amp-Trap AG fuse series is a complete line of Class G fuses. AG fuses safely fit a wide variety of applications. Class G fuses are made in four physical sizes and provide superior branch-circuit protection for lighting, heating, and appliance circuits.

FEATURES/BENEFITS:

- Four unique sizes from 1/2-60 amperes do not allow interchangeability with other fuse classes
- Fiberglass bodies provide dimensional stability in harsh industrial settings

HIGHLIGHTS:

- Current-limiting
- Time-delay (above 5A)

APPLICATIONS:

- Lighting
- Heating*
- Appliances

*except in Canada where fuses must be "P" or "D" type.

APPROVALS:

- UL listed to standard 248-5 File E2137
- CSA certified to standard C22.2 No. 248.5

ATMR

Fast Acting/Class CC

NORTH AMERICAN POWER FUSES

SMALL FUSE - BIG PROTECTION
FOR GENERAL CIRCUITS

Amp-Trap® ATMR fuses, in the Class CC family, are the smallest dimension 600VAC/DC fuses suitable for branch circuit protection. The ATMR is a popular choice for economical protection of control circuits and control circuit transformers where available short circuit currents exceed 10,000 amperes. ATMR's rejection dimensions prevent substitution by lesser rated fuses. These fast acting fuses give current-limiting protection to general circuits.

RATINGS:

- **Volts:** 600VAC / DC
- **Amps:** 1/10 to 30A
- **IR:** 200kA I.R. AC, 100kA I.R. DC

HIGHLIGHTS:

- Fast-acting
- Very current-limiting

APPLICATIONS:

- Control circuits
- Lighting
- General loads
- Branch circuit protection

FEATURES/ BENEFITS:

- Rejection-style design prevents replacement errors when used with recommended fuse blocks
- Versatile design for individual component and branch circuit protection

APPROVALS:

- UL Listed to Standard 248-4 File E2137
- CSA Certified to Standard C22.2 No. 248.4
- DC listed to UL Standard 248

OT/OTN/OTS

Class K-5

NORTH AMERICAN POWER FUSES

FOR VERSATILITY AND ECONOMY, THESE GENERAL PURPOSE FUSES ARE HARD TO BEAT

OT, OTN and OTS general purpose fuses provide low cost protection for feeder and branch circuits serving lighting, heating, and other non-motor loads. OT, OTN and OTS fuses will safely interrupt available short circuit currents up to 50,000 amperes in all ratings. OT, OTN and OTS fuses are not rejection fuses – care should be taken to ensure that replacement fuses do not have lower interrupting ratings than original fuses. OTN 15 through 60 satisfy the Canadian electrical code requirement for Type “P,” low melting-point, non-time-delay fuses.

FEATURES/BENEFITS:

- Easy to read imprint label for quick recognition and replacement
- Low cost for high protection value

APPLICATIONS:

- Feeders
- Branch circuits
- Resistive heating
- Residential and small commercial installations

RATINGS:

OT

- **Volts:** 250VAC / DC
- **Amps:** 1 to 600A
- **IR:** 50kA I.R. AC, 20kA I.R. DC

OTN (Canada)*

RF/RFS

Class H

NORTH AMERICAN POWER FUSES

TRADITIONAL PROTECTION FOR CIRCUITS WITH LESS THAN 10,000A

RF and RFS general purpose fuses are suitable for applications where available short circuit currents do not exceed 10,000 amperes. RF and RFS renewable fuses use matched RL and RLS die-cut zinc links from 1 to 600 amperes in 32 ratings.

FEATURES/BENEFITS:

- Knurled bushings for ease of disassembly
- Rugged construction for maximum service life
- Precision die-cut renewal links renew quickly and give repeatable performance

SAFETY NOTE:

Class H fuses of the renewable type shall be permitted to be used only for replacement in existing installations where there is no evidence of overfusing or tampering (NFPA 70, Article 240.60 [D]).

RATINGS:

RF

- **Volts:** 250VAC
- **Amps:** 1 to 600A

Plug Fuses: G/GP/TD/GW/GTL/GT/GSL

Plug Fuses

NORTH AMERICAN POWER FUSES

Mersen Plug Fuses are for industrial and residential applications. Standard non-time delay fuses are for receptacle and lighting circuits. Standard time delay fuses are for motor loads. For Canadian requirements, a type "P" fuse is used for non-motor loads and type "D" fuses are used for electric heating and cycling loads circuits. Both fuses have low melting-point temperature elements. Low-Temp time delay plug fuses have thermal sensitivity are also for cycling loads and motor circuits. Type "S" plug fuses are time delay and tamper-resistant.

Midget, Miniature & PC Mount Fuses

Maximum Protection.

Minimum Space.

Your problem: As different as their job descriptions are on paper — today's maintenance crews, specifying engineers, and OEM designers have one thing in common: They're all working with smaller electrical system components. Be it motor starters, transformers, or circuit-control equipment. So, where do you turn for small dimension fuses without a reduction in protective capacity?

Our solution: Our international range of midget and miniature dimension and new PC mount fuses offers you all the protection you require. A wide range of ratings. Special characteristics like time-delay and low I²t. All within a footprint of 1-1/2" x 13/32" or less.

Want more information fast? For more technical or application-specific information, please call our Midget and Miniature Dimension fuse experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

ATQ Time-Delay Midget Fuses

Amp-Trap® ATQ midget time-delay fuses are rated a full 500 volts AC with 42 ampere ratings from 1/10 to 30A. They are an excellent choice for supplemental protection of circuits up to 30A where the available short circuit current does not exceed 10,000A. (Not for Branch Circuit Protection).

Features/Benefits:

- Numerous ratings for a wide variety of applications up to 500VAC
- Time-delay (12 seconds at 200% rating) for circuits with high inrush current
- Can be used with UltraSafe™ Fuse holders
- 1 1/2" x 13/32" (10mm x 38mm) dimensions

Highlights:

- Time-delay

Applications:

- Supplemental protection of lighting, solenoid, motor and transformer circuits

ATM Fast-Acting Midget Fuses

Amp-Trap® midget fast-acting ATM fuses are rated 600 volts AC and DC, with a 100kA interrupting rating. These ratings give the ATM a wide range of applications not covered by other midget fuses. In addition, ratings of 30/35, 30/40 and 30/50 amperes are offered for specific applications such as capacitor protection. These ATM fuses must still be considered 30A fuses because of their dimensions, but are able to withstand much higher inrush currents and tougher duty cycles. (Not for Branch Circuit Protection).

Features/Benefits:

- For supplemental protection of small motors and transformers
- Extended ratings for special protection of capacitors and circuits with high inrush currents
- 600VDC ratings for a wide variety of applications including photovoltaic and solar applications.
- Can be used with UltraSafe™ fuse holders
- 1 1/2" x 13/32" (10mm x 38mm) dimensions

Highlights:

- Fast-acting
- Special Ratings (Above 30A)

Applications:

- Supplemental protection of circuits up to 600VAC and 600VDC with 100kA I.R.

DCT Special Purpose Midget Fuses

Mersen DCT fuses were developed to meet requirements coming from new applications such as protection of photovoltaic cells, multi meters and compact on board traction equipment for auxiliary circuits. This high performance DC fuse in its compact size offers multiple competitive advantages particularly for international applications where DC voltage requirements are above 600V DC.

Features/Benefits:

- Low minimum breaking capacity (MBC)
- Compact size: 10 x 38 mm (13/32" x 1-1/2") size internationally accepted.
- Ferrule mount 1 to 30A for design versatility
- Can be used with UltraSafe™ fuse holders USM series
- 1 1/2" x 13/32" (10mm x 38mm) dimensions

Highlights:

- 750VAC / 1000VDC
- DC : L/R = 1mS

Applications:

- DC traction equipment
- Multi-meters
- Photovoltaic systems
- Semiconductor protection

FSM Multi-Meter Fuse

Mersen has developed a true 1000V AC/DC fuse designed to protect both analog and digital multi-meters. These fuses cover all the industry's multi-meter requirements in three easy to use amperage ratings. Good for 1000V AC and DC, the FSM line of Mersen fuses are designed for the power electronics metering and controls market.

Features/Benefits:

- For the protection of multi-meters
- 1000V AC/DC for full range protection
- 100% Current rated for continuous current with L/R = 10mS carrying capability
- Glass melamine body and plated terminals provide superior reliability and performance

Highlights:

- Fast-acting
- Current-limiting

Applications

- Multi-meters

GGU Fast-Acting Midget Fuses

125 volt AC rated GGU fuses have midget fuse dimensions (1-1/2" long x 13/32" diameter). 20A-30A ratings have ceramic bodies, allowing use in higher ambient temperature conditions than other similar fuses. (Not for Branch Circuit Protection).

Features/Benefits:

- Glass body on 1-15A makes status of fusible element clearly visible
- Ceramic body on 20-30A allows use in higher temperature applications
- Medium lag for protection of circuits up to 30A and 125VAC
- Can be used with UltraSafe™ fuse holders (1-30A)
- 1 1/2" x 13/32" (10mm x 38mm) dimensions

GFN Time-Delay Midget Fuses

GFN midget indicating fuses are available in ratings from 1/10 through 30A. These time-delay fuses have built-in blown fuse indicators which pop out at the end of the fuse to visually indicate when the fuse has operated to open the circuit. Indicators may be used to trip a switch for remote as well as visual annunciation. (Not for Branch Circuit Protection).

Features/Benefits:

- Pin indicator provides visual indication of open fuse or actuates switch for remote signaling
- Numerous ratings for a wide variety of applications
- 12 second time-delay at 200% rating
- Can be used with UltraSafe™ fuse holders (1/10 - 10A)
- 1 1/2" x 13/32" (10mm x 38mm) dimensions

Highlights:

- Pin indicator
- Time-delay
- 12-30A double body

Applications:

- For supplemental protection of circuits where time-delay and blown fuse indication are required, such as solenoid circuits or control circuits.

SBS Fast-Acting Ferrule Fuses

Unique dimensions for today's smaller equipment and components. Fast-acting general purpose fuse developed in response to the industry's demand for smaller equipment and components. The only fuse in their size with a full 600 VAC rating for all ampere ratings by UL standard 248-14 and CSA No. 59.2, and are the only fuses of this size with an interrupting rating of 100kA RMS. SBS fuses are 1-3/8" long, smaller by 1/8" than most standard midget fuses and are available in 22 ampere ratings, from 2/10A to 30A. (Not for Branch Circuit Protection).

Features/Benefits:

- Small unique physical size for maximum design flexibility and non-interchangeability with other fuse classes
- Fiberglass body provides dimensional stability in harsh industrial environments
- Can be used with UltraSafe™ fuse holder
- 1 3/8" x 13/32" dimensions

Highlights:

- Fast-acting
- Unique dimensions

Applications:

- Control circuits
- Lighting ballasts
- Meter circuits
- Electronic circuits
- General purpose protection

PCF Fast-Acting PC Mount Fuses

Fast-acting fuses for direct mounting on printed circuit boards.

Mersen's PCF series of fast-acting direct-mountable fuses addresses the increasing need for electrical protection at the PC board as current and voltage requirements push higher. These fuses help printed circuit board manufacturers reduce parts by eliminating clips and fuse blocks and allowing automated assembly. PCF fuses can be used for the protection of main frame power boards, small circuit breakers with low-interrupting ratings and other critical components. PCF fuses bring greatly-increased ampere, voltage and interrupting ratings to the board itself and are UL Component Recognized.

Highlights:

- Fast-acting
- PC board mount
- Three mounting styles

Applications:

- Protection of main frame power boards, circuit breakers, components

PCS Semiconductor PC Mount Fuses

Semiconductor protection fuses for direct mounting on printed circuit boards.

Mersen's PCS series of extremely fast-acting, direct-mountable fuses address the increasing need for electrical protection at the PC board as current and voltage requirements push higher. These fuses help printed circuit board manufacturers reduce parts by eliminating clips and fuse blocks and allowing automated assembly. PCS fuses are AC and DC rated and are extremely current-limiting. They will protect semiconductors, main frame boards, circuit breakers with low interrupting rating and other critical components. PCS fuses bring I²t protection, higher voltage and interrupting ratings to the board itself and are UL Component Recognized.

Highlights:

- Extremely fast-acting
- PC board mount
- Three mounting styles

PCT Time-Delay PC Mount Fuses

Time-delay fuses for direct mounting on printed circuit boards.

Mersen's PCT series of time-delay, direct-mountable fuses addresses the increasing need for electrical protection at the PC board as current and voltage requirements push higher. These fuses help printed circuit board manufacturers reduce parts by eliminating clips and fuse blocks and allowing automated assembly. PCT fuses can be used for the protection of main frame power boards, small circuit breakers with low interrupting ratings and other components. PCT fuses bring protection with time-delay, greatly increased ampere, voltage and interrupting ratings to the board itself and are UL Component Recognized.

Highlights:

- Time-delay
- PC board mount
- Three mounting styles

Applications:

- Protection of main frame power boards, circuit breakers, components

Radial Lead Micro Fuses

MRF

- Fast-acting microfuse

Thermoplastic body
and cap, UL 94-V0

Pins are tin-lead plated copper alloy

Approvals: VDE, MITI, CE,

UL Recognized, CSA Accepted

50mA to 6.3A, 250VAC - UL Recognized and CSA Accepted

MRT

- Time-delay microfuse

Thermoplastic body
and cap, UL 94-V0

Pins are tin-lead plated copper alloy

Approvals: SEMCO, VDE, MITI, CE,

UL Recognized, CSA Accepted

80mA to 6.3A, 250VAC - UL Recognized and CSA Accepted

In-Line Fuse Holders SFRT, SFRB, SFRG, FSFE, SFRU

SFRT

- Twist-lock
- In-line fuse holders for FSFE fuses.
- Used at 32V or less with fuses rated up to 20A when proper spring for fuse size is installed.

SFRB

- Bayonet knob
- In-line fuse holders for FSFE fuses.
- Used at 32V or less with fuses rated up to 20A when proper spring for fuse size is installed.

Standard Fuse Ampere Ratings

Catalog Number*	Fuse Installed
SFRT4	FSFE4
SFRT6	FSFE6
SFRT7-1/2	FSFE7-1/2
SFRT9	FSFE9
SFRT14	FSFE14
SFRT20	FSFE20

*Includes FSFE fuse

SFRB4	FSFE4
SFRB6	FSFE6
SFRB7-1/2	FSFE7-1/2
SFRB9	FSFE9
SFRB14	FSFE14
SFRB20	FSFE20

*Includes FSFE fuse

SFRG

- In-line fuse holder for 5 x 20mm fuses.
- Max. current rating for 5x20mm fuses - 10A @ 32V

FSFE

- Glass body
- Fast-acting

4A through 30A, 32VAC/DC - UL Listed

SFRU

Universal in-line fuse holder - supplied with 15" loop of #14 AWG red vinyl insulated wire frame and three springs in different lengths to accommodate FSFE size fuses.

Standard Fuse Ampere Ratings

In-Line Fuses and Holders SLR, SMF, SHR

Mersen SLR and SMF in-line fuses are used to protect fluorescent lighting fixtures and ballasts. The SLR is a fast-acting fuse. SMF is a time-delay fuse. Both used to protect individual 300V fixtures. Mersen's SHR fuse holder has an integral clip for panel mounting to meet this requirement. The holder fits into a standard 7/8" knock-out or keyhole punch that provides anti-rotation. The SHR is available in a single or double wire version. The single wire version (SHR-1) allows insertion of #18 AWG ballast leads directly into the holder.

SLR Fuses Ratings:

Volts : 300VAC
Amps : 1/2 to 15A
I.R. : 10kA I.R.

Approvals:

- UL Listed
File No. E10480
CSA Certified

SMF Fuses Ratings:

Volts : 300VAC
Amps : 3/10 to 10A
I.R. : 10kA I.R.

Approvals:

- UL Listed
File No. E10480
CSA Certified

SHR Fuse Holders Ratings:

Volts : 300VAC
Amps : 15A
Withstand Rating:
: 10kA I.R.

Dielectric Strength:
: 2,000V

Approvals:

- UL Recognized
Component Guide
IZLT2, UL File
No. E52283

Highlights:

- Fast-acting
- Integral fuse & insulating cap

Highlights:

- Time-delay
- Integral fuse & insulating cap
- Designed specifically to handle ballast inrush currents

Highlights:

- Superior wire retention
- Thermoplastic insulator - 150° C RTI
- Single and two wire versions
- Two load plug-in ports available
- Integral mounting clip 0.062" thick panel
- Integral wire retention clip to hold #18 wire
- Tin plated, insulated #18 solid copper wire leads, 6" length

Semiconductor Fuses

Semiconductor technology is widespread. Not by coincidence, so's our semiconductor fuse line.

Your problem:

Hardly an electric-powered product exists today that doesn't rely on semiconductor technology to some degree. That means extending circuit protection to thyristors, triacs, diodes, and a host of other solid-state components — as well as a wide range of voltage requirements, unique mounting configurations, and special protection characteristics.

Our solution: Mersen affords OEM designers and equipment-maintenance personnel a comprehensive line of Form 101 semiconductor protection fuses in ratings from 130 to 1500VAC. Plus, Square Body North American and European-Dimension semiconductor fuses in 690/700 and 1250/ 1300V ratings (four sizes of each). Plus, compatible fuse blocks and accessories such as blown-fuse indicators, Trigger® switch actuators, and add-on switches.

Want more information fast? For more technical or application-specific information, please call our Semiconductor Fuse experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

A15QS Semiconductor Protection Fuses

A15QS Amp-Trap® Form 101 Semiconductor Protection fuses were designed for the specific protection of diodes and other semiconductor devices rated 150VAC/DC. The A15QS product line's compact design is perfect for those applications that have limitations on available space.

Features/Benefits:

- Low I²t minimizes damage to protected components on short circuit
- Controlled arc voltage reduces stress to circuit components during fuse clearing
- Choice of mounting types provides options for unique termination requirements

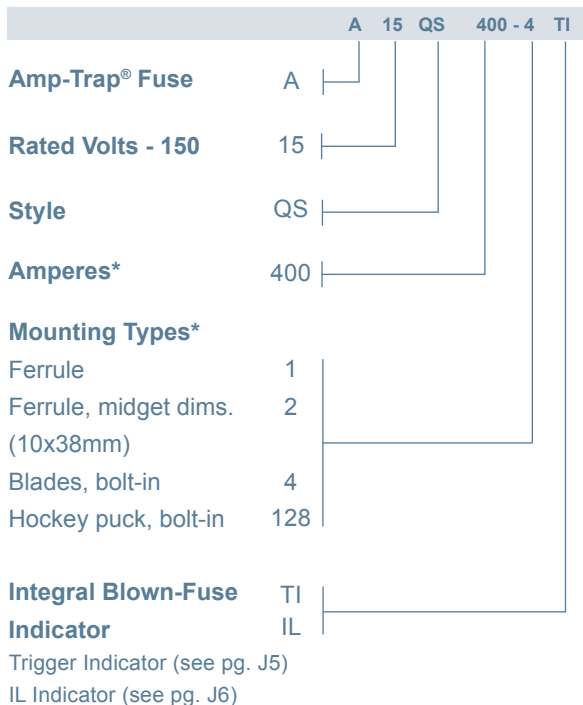

Highlights:

- Fast acting
- Current limiting
- Low I²t
- Indicator options available

Applications:

- Protection of heavy duty devices such as electrochemical rectifiers

A30QS Semiconductor Protection Fuses

A30QS Amp-Trap® Semiconductor Protection fuses are intended for the protection of Power Semiconductors such as diodes, phase control SCR's and other power semiconductor devices. The A30QS is recommended for new applications providing solutions for your critical protection needs at 300V and less semiconductors.

Features/Benefits:

- Low I²t minimizes damage to protected component on short circuit
- Controlled arc voltage reduces stress to circuit components during fuse clearing
- Choice of mounting types helps in equipment design

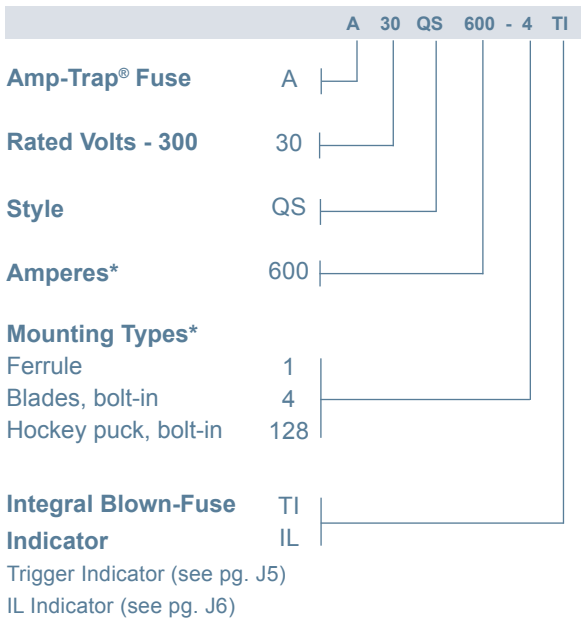

Highlights:

- Fast acting
- Current-limiting
- Low I²t
- Indicator options available
- Superior DC capabilities

Applications:

- Protection of 300V (or less) heavy duty rectifiers and similar heavy duty power supplies

A50QS Semiconductor Protection Fuses

A50QS Amp-Trap® Form 101 fuses grew out of the need to improve the overall performance of semiconductor fuses in response to new equipment requirements. The A50QS encompasses the best protection features – lower I²t to provide better protection for equipment, longer life when subjected to cyclic loading and lower watts loss. A50QS is today's best choice for the protection of dynamic solid state equipment such as motor drives, inverters, UPS, etc.

Features/Benefits:

- Lowest I²t for greatest protection of semiconductor circuits
- Low watts loss for cooler operation
- Superior cycling ability gives an equipment design advantage
- State-of-the-art protection for 500V equipment
- Ultra compact sizes allow down-sizing of existing equipment

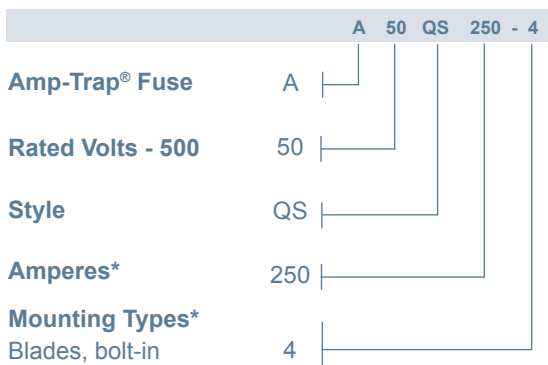

Highlights:

- 500V AC/DC rated
- Lowest I²t
- Low watts loss
- Superior cycling ability

Applications:

- Protection of 500V or less motor drives, UPS, inverters, etc.

A50P Semiconductor Protection Fuses

A50P Amp-Trap® Form 101 Semiconductor Protection fuses were developed for DC drives, uninterruptable power supplies and similar applications requiring better protection (lower I²t) and superior reliability. The A50P is typically used for replacement.

Features/Benefits:

- Low I²t minimizes damage to protected components on short circuit
- Controlled arc voltage reduces stress to circuit components during fuse clearing
- Choice of mounting types helps in equipment design

Highlights:

- Very fast acting
- Current limiting
- Low I²t
- Indicator options available

Applications:

- Protection of DC drives, UPS and other equipment of 500 volts or less

A60Q Semiconductor Protection Fuses

A60Q Amp-Trap® Form 101 Semiconductor Protection fuses feature the only 600V AC / DC rating in the industry of similar size (1-1/2" x 13/32") fuses protecting semiconductors. A60Q also has the lowest I²t of all similar fuses and excellent cycling ability. Applications include inverters and small equipment requiring extremely fast response to faults, without the need to carry sustained heavy overloads.

Features/Benefits:

- Lowest I²t of any fuse this size for greater protection
- Excellent cycling ability gives advantage in equipment design
- 600V AC / DC rated

Highlights:

- 600VAC/DC rated
- Extremely fast acting
- Current limiting
- Lowest I²t
- Excellent cycling ability

Applications:

- Protection of small inverters and drives, and equipment requiring the highest degree of protection

A60X Semiconductor Protection Fuses

A60X Amp-Trap® Form 101 Semiconductor Protection fuses are popular for the protection of higher voltage heavy rectifiers such as traction rectifiers. They can carry long sustained overloads common with heavy duty apparatus. 700A through 2000A sizes are of compact, hockey-puck design, able to provide high power protection in a small space.

Features/Benefits:

- Low I^2t minimizes damage to protected components on short circuit
- Controlled arc voltage reduces stress to circuit components during fuse clearing
- Choice of mounting types helps in equipment design

Highlights:

- Fast acting
- Current limiting
- Low I^2t
- Indicator options available

Applications:

- Protection of heavy traction and electrochemical as well as rectifiers and other heavy-duty equipment

10x38 gR Semiconductor Protection Fuses

The 10x38 gR is a fast acting, full range fuse utilized in the protection of inverters, UPS and other discrete semi-conductor devices

Features/Benefits:

- International 10 X 38 mm (1 1/2" X 13/32") size for worldwide acceptance
- Ferrule mount 1 to 32A for design versatility
- Low I²t for improved semiconductor protection
- gR Class according to VDE 636-23 and IEC 269.4

Highlights:

- Extremely fast acting
- Current limiting
- Low I²t for improved semiconductor protection
- Excellent cycling capability
- gR

Applications:

- Protection of small inverters, UPS systems, motor drives and similar 700V or less equipment

A70QS French Cylindrical

These Premium Amp-Trap® French cylindrical semiconductor fuses are an extension of the popular A70QS product line. They are solid-fill 14mm and 22mm fuses, IEC rated 690VAC, 200kA Interrupting and 700VDC, 100kA interrupting at 10ms time constant. In addition, these fuses have an 890 VDC rating for capacitor discharge applications up to 2.5ms time constant. All ampere ratings are available with a striker. Applications include small inverter drives and UPS systems, with superior I²t for improved protection and performance.

Features/Benefits:

- International 14x51mm (2"x9/16") and 22x58mm (2-1/4"x13/16") sizes for worldwide acceptance
- Ferrule mount up to 100A for design versatility
- Very low I²t for improved semiconductor protection
- 690V IEC rated, tested at 760VAC; can be used up to 750VAC in U.S.
- 700VDC rated for DC protection of equipment with L/R ≤10ms
- Superior cycling ability for longer life on difficult cyclic loading applications
- aR characteristic for semiconductor short-circuit protection

Highlights:

- 14 x 51 and 22 x 58 sizes
- 690VAC IEC rated (760VAC max.)
- 700VDC rated
- Superior cycling ability
- Low watts loss
- Optional striker for visual/remote Indication

Applications:

- Small inverters, UPS systems, motor drives and similar 700V or less equipment

A70QS Amp-Trap® Form 101

A70QS Amp-Trap® Semiconductor Protection fuses were developed in response to the need for improved overall performance of 700V semiconductor fuses for new equipment requirements. A70QS fuses have lower I²t for better protection, longer life when subjected to cyclic loading, plus lower watts loss. A70QS is the best choice to protect dynamic solid state equipment such as motor drives, UPS, etc.

Features/Benefits:

- Very Low I²t for improved protection of equipment
- Superior cycling ability for long, reliable life on high cyclic loading
- Low watts loss for cooler operation
- 700V AC/DC rating gives greater design versatility
- Ultra compact sizes allow down-sizing of existing equipment

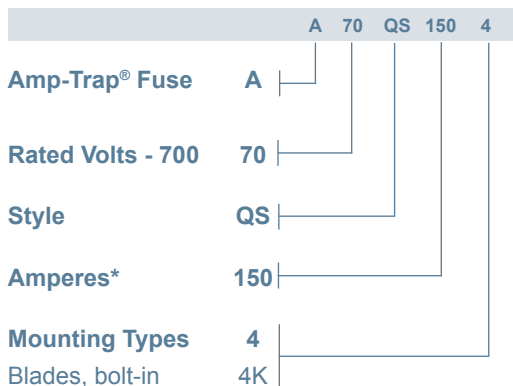

Highlights:

- 700V AC/DC rated
- Very low I²t
- Low watts loss
- Superior cycling ability
- All available with indicator (IL)

Applications:

- Protection of 700V or less motor drives, UPS, inverters, etc.

A70P Amp-Trap® Form 101

A70P Amp-Trap® Form 101 Semiconductor Protection fuses were developed for higher voltage AC and DC drives, UPS systems, reduced voltage motor starters and similar applications where lower I²t and superior reliability are needed. A70P is a very popular fuse, available in a wide range of ratings. Typically used for replacement.

Features/Benefits:

- Low I²t minimizes damage to protected components on short circuit
- Controlled arc voltage reduces stress to circuit components during fuse clearing
- Choice of mounting types helps in equipment design

Highlights:

- Very fast acting
- Current limiting
- Low I²t
- Indicator options available

Applications:

- Protection of 700V or less DC drives, UPS, inverters, reduced voltage starters, etc.

A70Q Amp-Trap® Form 101

A70Q Amp-Trap® Semiconductor Protection fuses were developed for inverter applications requiring extremely low I²t. A70Q fuses provide the most responsive protection for applications not required to sustain heavy overloads. Typically used for replacement purposes.

Features/Benefits:

- Lowest I²t of any fuse in this voltage rating for best overall protection
- 700V AC, 650V DC rating allows protection of greater variety of circuits
- Solid fill technology for extra reliability in performance

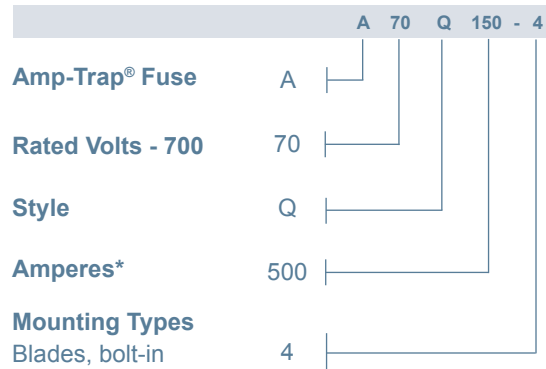

Highlights:

- Extremely fast acting
- Current limiting
- Lowest I²t

Applications:

- Protection of inverters and other equipment requiring the best AC or DC protection in this voltage range

A100P Amp-Trap® Form 101

A100P Amp-Trap® Form 101 Semiconductor Protection fuses are rated 1000V, extending the range of protection for UPS systems, AC and DC drives, reduced voltage motor starters and similar applications where lower I²t and superior reliability are needed. With ratings from 15 through 1000 amperes, a wide range of high voltage applications can be served.

Features/Benefits:

- Low I²t minimizes damage to protected components on short circuit
- Controlled arc voltage reduces stress to circuit components during fuse clearing
- Wide range of ampere ratings

Highlights:

- Fast acting
- Current limiting
- Low I²t
- Optional trigger indicator

Applications:

- Protection of UPS systems AC/DC drives, reduced voltage motor starters and other 1000V or less semiconductor devices

A120X Amp-Trap® Form 101

A120X Amp-Trap® Form 101 Semiconductor Protection fuses, rated 1/2A through 30A, 1200VAC are popular for use in traction drive auxiliary circuits and similar applications. A120X fuses are also suitable for use on 1000VDC auxiliary circuits with low time constants.

Features/Benefits:

- 1000V DC rated for wide range of circuits
- Compact size fits in where competitive sizes will not fit

Highlights:

- Fast acting
- Current limiting
- Low I^2t
- Compact size

Applications:

- Protection of traction drive auxiliary circuits, etc.

A150X Amp-Trap® Form 101

A150X Amp-Trap® Form 101 Semiconductor Protection fuses, rated up to 1000A, 1500VAC/DC are suitable for traction drive and auxiliary circuits and for high voltage heavy duty rectifier applications. A150X fuses are suitable for use up to 1500VDC on circuits depending on time constant.

Features/Benefits:

- 1500VAC/DC rated for wide range of applications
- Heavy duty links
- Rugged fiberglass body

Highlights:

- Fast acting
- Current limiting
- Low I^2t

Applications:

- Protection of traction drive and auxiliary circuits, etc.
- Protection of heavy-duty rectifiers or heavy-duty higher voltage rectifiers
- Common DC bus protection up to 1500VDC

6,9 gRB-URB European Semiconductor Fuses

690V

gRB-URB FROM 12 TO 100A

Size: 17 x 49

Features/Benefits:

- Extremely high Interrupting rating
- Protection of power semiconductors as per IEC standard 269.4
- 690V rating as per IEC 33
- gR class [current rating 12 to 90A] as per VDE 636-23
 - Full range protection
 - Improved safety and protection
 - Allows selective coordination
- aR class [current rating 100A] according to VDE 636-23 and IEC 269.4
- Connections as per:
 - German Standard DIN 43653/00C
 - British Standard BS 88-4
- These fuses are UL recognized

500 - 690V AC

gRB-URB FROM 20 TO 400A

Size: 000

Features/Benefits:

- Extremely high interrupting rating
- Protection of power semiconductors according to IEC 269.1 and EN 60269.4
- 500-690V [Rating 20 to 400A]
- gR class [gRB Ratings 20 to 125A] according to VDE 636-23
 - Full range protection
 - Improved safety and protection
 - Allows selective coordination
- aR class [current rating 80 to 400A] according to VDE 636-23 and IEC 269.4
- 3 models complying with DIN 43653-00C are:
 - With or without blown fuse indication
 - With trip indicator
- Model complying with DIN 43620 (00C)
 - Standard with or without blown fuse indication
 - With trip indicator

The use of MC 6.3 GR 2-5N blown fuse remote sensing microswitch is possible.
 Ref. Number: Y 310015 mounted on separate trip-indicator.
 See Microswitch section page J10, J12.

Size 00 British Standard

Protistor® Fuses

690V

gRB-URB from 16 to 450A

Size: 00

Features/Benefits:

- Extremely high Interrupting rating
- Protection of power semiconductors according to IEC 269.1 and 4
- 690V
- gR class [gRB ratings 16 to 160 A] according to VDE 636-23
 - Full range protection
 - Improving safety and protection
 - Allows selective coordination
- aR class [URC and URD Ratings 16 to 450A] according to VDE 636-23 and IEC 269.4
- Connections according to:
 - DIN 43653/00C 80 and 110mm between axes
 - DIN 43620/00C solid blades
- Optional pin indicator for operating a microswitch

Protistor® Fuses

690V

URE/URS/URT from 5 to 160A

Sizes: 10 X 51 - 17 X 49 - 2 x 17 x 49 mm

Features/Benefits:

- Extremely high Interrupting rating fuses
- Protection of power semiconductors according to IEC 269.1 and 4
- aR class (ratings from 5 to 160A) according to IEC 269.4
- Two models complying with BS 88-4
 - without indicator (17X49mm)
 - with external trip-indicator (2x17x49mm)

690/700 Volt PSC Square Body

Mersen 690/700V PSC square body fuses provide maximum flexibility in equipment design and ultimate protection for today's power conversion equipment. These square body fuses are available in four different body sizes, each size having more than seven worldwide acceptable mounting styles. The different mounting styles and body sizes along with a broad range of ampere ratings allow greatest flexibility in equipment design.

Mersen PSC fuses have been engineered to provide state-of-the-art protection for SCRs, diodes, thyristors, GTOs and IGBT devices. They have die-cut elements embedded in solidified sand, which helps control arcing characteristics for low I^2t and high interrupting rating. All contact surfaces are silver plated and all hardware is non-magnetic.

All PSC square body fuses are equipped with a low voltage trip-indicator. This trip-indicator can operate a field mountable microswitch which is easily mounted directly onto the fuse.

Features/Benefits:

- Choice of mounting styles gives wide choice for equipment design
- Broad range of ampere ratings in a given body size for design flexibility
- UL/CSA/IEC 60269-4 compliance for worldwide semiconductor applications

Highlights:

- Extremely fast-acting
- Current-limiting
- Very low I^2t
- Worldwide acceptability
- Superior cycling ability

Applications:

- Protection of rectifiers, inverters, DC drives, UPS Systems, reduced voltage motor starters, and other equipment in globally accepted applications

1250/1300 Volt PSC Square Body

Mersen 1250/1300V PSC square body fuses provide maximum flexibility in equipment design and ultimate protection for today's power conversion equipment. These square body fuses are available in four different body sizes, each size having more than four worldwide acceptable mounting styles. The different mounting styles and body sizes along with a broad range of ampere ratings allow greatest flexibility in equipment design.

Mersen PSC fuses have been engineered to provide state-of-the-art protection for SCRs, diodes, thyristors, GTOs and IGBT devices. They have die-cut elements embedded in solidified sand which helps control arcing characteristics for low I^2t and high interrupting rating. All contact surfaces are silver plated and all hardware is non-magnetic.

All PSC square body fuses are equipped with a low voltage trip-indicator. This trip-indicator can operate a field mountable microswitch which is easily mounted directly onto the fuse.

Features/Benefits:

- Choice of mounting styles gives wide choice for equipment design
- Broad range of ampere ratings in a given body size for design flexibility
- UL/CSA/IEC 60269-4 compliance for worldwide semiconductor applications

Highlights:

- Extremely fast acting
- Current limiting
- Very low I^2t
- Superior cycling ability

Applications:

- Protection of rectifiers, inverters, DC drives, UPS Systems, reduced voltage motor starters, and other equipment in globally accepted applications

Catalog Number Designation:

A070 UR: North American Mounting Style/Approval Tested @ V_N

PC: European/IEC Mounting Style/Approval Tested @ $1.1 V_N$

* V_N = rated voltage

N. American Catalog Numbering System

European Catalog Numbering System

Ratings:

- Volts** : 650-1300 VAC
: DC - Consult Factory
- Amps** : 50-1800A
- I.R.** : 100kA AC

Approvals:

- UL recognized component File E76491
- IEC 60269-4 certified
- CSA 012636 0 000
- CCC approved

URB/URD/URL French Cylindrical

Protistor® fuses

600V AC URD from 0.10 up to 0.80A**

500V AC URB/URD/URL from 1 up to 30A

Size: 10 x 38mm

Features/Benefits:

- Extremely high Interrupting rating
- Protection of power semiconductors according to IEC 269.1 and 4
- 500-600V AC
- aR class according to VDE 636-23 and IEC 269.4
- Without blown fuse indication according to NF C 63210 and 63211 - 0.10 up to 0.80A**
- With built in trip-indicator (1 up to 30A) Mersen Specialty*

690V AC

URC/URD from 6 up to 100A

Sizes: 14 x 51 & 22 X 58

Features/Benefits:

- Extremely high Interrupting rating
- Protection of power semiconductors according to IEC 269.1 and 4
- 690V AC
- aR class according to VDE 636-23 and IEC 269.4
- Two models according to NF C 63210 and 63211 with and without blown fuse built-in trip-indicator for sizes 14 x 51 and 22 x 58
- UL recognized (except 6A)*

27x60 - With blown fuse trip-indicator (mm)

821cp gRB French Cylindrical

800V AC
gRB from 8 to 110A
SizeS: 27 X 60 mm

Features/Benefits:

- Extremely high Interrupting rating
- Protection of power semiconductors complying with IEC standards 269-1 and 4
- 800V voltage rating according to IEC 33
- gR Class as per IEC 269-4
 - Full range protection
 - Improved safety and protection
 - Allows selective coordination
- With built in trip indicator

gG Cylindrical Fuse-Links

IEC Low Voltage General Purpose Protection

Mersen 690V gG fuses offer a wide range of protection in electrical distribution circuits and various industrial applications. All cylindrical fuses have ceramic bodies and silver-plated ferrules. Our technology and process was designed to ensure highly reliable technical performance.

Benefits

- Small size
- Safest and most reliable protection system
- High limiting and breaking capacity
- Low power dissipation

Applications

- Motors
- Transformers

Medium Voltage Fuses & Accessories

Various types. Different configurations.

Many ratings. One solution.

Your problem:

On one hand you need current limiting protection for medium voltage transformers and distribution systems that supply industrial plants, shopping centers, hospitals, schools, office buildings and underground residential service. On the other, you need high short-circuit current protection to avoid damages to busway, motors, switches and other equipment.

Our solution: Current-limiting power fuses are widely used in these applications because they afford excellent over-current protection and noiseless operation, and because they can be used in confined spaces. The amount of damage in the faulted area and the mechanical stress and strain on busway, switches and other apparatus carrying the fault current is proportional to the square of the current and to the length of time the fault persists. By limiting the let through energy at the fault, properly applied current-limiting fuses assist in limiting or preventing short-circuit damage to busway, circuit breakers, switches, and other electrical components. Current-limiting power fuses are manufactured in ratings ranging from 1kV through 38 kV and in continuous current ratings from 0.5 amperes through 1200 amperes. Various designs are available for use with motors, transformers, capacitors, and circuit-protection equipment.

Want more information fast? For more technical or application-specific information, please call our Medium Voltage experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

2.75kV, 5.5kV, 8.25kV, 15.5kV, 25.8kV and 38kV Ferrule Mounted Fuses

Mersen fuses for the protection of transformers and distribution lines deliver overload and short circuit protection. These current-limiting fuses will melt at current that can be as low as 1.7 times the fuse current ratings up to its maximum interrupting rating. These fuses are designed to withstand the transformer magnetizing inrush current. They have 2 (size C), 3 (size D) and 4 (size E) inch diameter barrels with ferrules and are mounted in spring reinforced clips.

Features/Benefits:

- Amp-Trap CS-3 and 9F62 series are UL listed for compatibility with UL listed equipment.
- Ferrule mounting for standard clips and interchangeability with other brands of fuses.
- Current-limiting for superior equipment protection.
- Non-venting for silent operation
- Metal embossed catalog number and manufacturing date for lasting identification.
- Outdoor usage for the 9F62 and 9F60 type EJO.
- Blown-fuse indicator to give positive identification of open fuse:
 - Amp-Trap: 2" Barrel 1 lb tripped force - 0.19 Inch
 - Amp-Trap: 3" Barrel 2 lb tripped force - 0.50 Inch
 - 9F60/9F62: 0.125 lb tripped force – 0.20 Inch
- Accessories - see page E53

Highlights:

- E-Rated
- UL listed
- Outdoor use

Applications:

- Protection for 2.4kV to 34.5kV transformers or distribution systems.

Definitions:

General Purpose Current-Limiting Fuses (Per IEEE Std C37.40-2003):

A general purpose current-limiting fuse is one that is capable of interrupting all currents from its rated interrupting current down to the current that causes melting of the fusible element(s) in one hour or more.

E-Rating: E-Rated fuses are general purpose fuses that operate as follow (Per ANSI C37.46-2000):

- 100E or less – must melt in 300 seconds (5 mins.) at 200 to 240% of E (ampere) rating.
- Over 100E – must melt in 600 seconds (10 mins.) at 220 to 264% of E (ampere) rating.
- Example: A 100E fuse must melt in 300 seconds with an applied current of 200 to 240 amperes.

Power Distribution Fuses:

Defines fuses designed prior to the time where the ANSI standards defined the term "General Purpose" and do not meet all of the general purpose definition. These fuses are capable of interrupting all currents above 2.2 to 3 times the fuse's rated current up to its maximum interrupting rating.

Ratings

- See page E3 for listing

Approvals:

- UL listed to standard File E143362

Transformer Protection

Amp-Trap® and 9F62 Bolt-In Series

5.0kV, 5.5kV, 7.2kV, 8.25kV, and 15.5kV

Bolt-In fuses:

Mersen fuses for the protection of transformers and distribution lines deliver overload and short circuit protection. These current-limiting fuses will melt at current that can be as low as 1.7 times the fuse current ratings up to its maximum interrupting rating. These fuses are designed to withstand the transformer magnetizing inrush current. They are single, double, triple or quadruple barrels 3 inch diameter (size D) with end mounts designed for bolting directly to equipment bus or terminal pads.

Features/Benefits:

- UL listed for compatibility with UL listed equipment.
- Bolt-In mounting for direct connection to bus or terminals.
- Current-limiting for superior equipment protection.
- Non-venting for silent operation
- Metal embossed catalog number and manufacturing date for lasting identification.
- Outdoor usage for the 9F62.
- Blown-fuse indicator to give positive identification of open fuse.
 - Amp trap: 2 lb tripped force - 0.50 Inch
 - 9F62: 0.125 lb tripped force – 0.20 Inch

Highlights:

- E-Rated
- UL listed
- Outdoor use

Applications:

- Protection for 5.5kV to 15.5kV transformers or distribution systems.

Definitions:

General Purpose Current-Limiting Fuses (Per IEEE Std C37.40-2003):

A general purpose current-limiting fuse is one that is capable of interrupting all currents from its rated interrupting current down to the current that causes melting of the fusible element(s) in one hour or more.

E-Rating: E-Rated fuses are general purpose fuses that operate as follows (Per ANSI C37.46-2000):

- 100E or less – must melt in 300 seconds (5 mins.) at 200 to 240% of E (ampere) rating.
- Over 100E – must melt in 600 seconds (10 mins.) at 220 to 264% of E (ampere) rating.
- Example: A 100E fuse must melt in 300 seconds with an applied current of 200 to 240 amperes.

Clip-lock clips for CL-14 fuses:

228-700-520 (One pair of clips)

The clip lock design provides a reliable, high-pressure contact. Mersen CL-14 fuses have copper tabs which slide into position between the clip casting and cam. When the cam is locked by moving the pull ring, a high-pressure contact is made between the clip casting and fuse tab. Each clip includes two .44" diameter counter-sunk holes on 2" centers and two flat head socket screws (3/8-16 UNRC, recommended torque 200 pound-inches) for mounting the clip on standard NEMA insulators. Order catalog number 228-700-520 (for one pair of fuse clips, enough for one fuse).

Motor Protection

Amp-Trap® and 9F60 Series

2.4kV, 2.54kV, 4.8kV, 5.08kV and 7.2kV Ferrule mounted fuses:

Mersen R-Rated fuses are current-limiting, high interrupting rating fuses intended for the short circuit protection of medium voltage motors and motor controllers. R-Rated fuses are back-up fuses that have a minimum interrupting rating, and must be coordinated with overload relays in combination motor starters. The motor starter manufacturer generally specifies the R-Rated fuse size. These fuses come with a 3 (size D) or 4 (size E) inch diameter barrels with ferrules and are mounted in spring reinforced clips.

Features/Benefits:

- The Amp-Trap and 9F60 R-Rated fuses are UL Recognized.
- Ferrule mounting for standard clips and interchangeability with other brands of fuses.
- Current-limiting for superior equipment protection.
- Metal embossed catalog number and manufacturing date for lasting identification.
- Hookeye for non load-break isolation by hookstick
 - On the 4.8kV an optional hookeye mounted in the factory is available.
 - On all other 3" barrel if a hookeye is required, use the operating eye 9F61AAW612. (See page E58)
- Blown-fuse indicator to give positive identification of open fuse.
 - Amp trap: 3" Barrel 2 lb tripped force - 0.50 Inch
 - 9F60: 0.125 lb tripped force – 0.20 Inch

Highlights:

- R-Rated
- UL recognized

Applications:

- Short circuit protection of medium voltage motors and motor controllers.

Definitions:

R-Rating: R-Rated fuses are back-up fuses that operate as follows (Per ANSI C37.46-2000): An R-Rated fuse will melt in the range of 15 to 35 seconds at a value of current equal to 100 times the "R" rating.

Back-up Current-Limiting Fuses: A back-up current-limiting fuse is a fuse that can interrupt any current between its rated minimum interrupting current and its maximum interrupting current. Back-up fuses are not designed or intended to open under overload conditions.

Continuous Ampere Rating at 40°C: The continuous amp rating defines the thermal capability of the fuse per ANSI C37.46 and should not be the sole factor in fuse selection.

Amp-Trap® Bolt-In Series

5.08kV, 7.2kV and 15.5kV

Bolt-In fuses:

Mersen R-Rated fuses are current-limiting, high interrupting rating fuses intended for the short circuit protection of medium voltage motors and motor controllers. R-Rated fuses are back-up fuses that have a minimum interrupting rating, and must be coordinated with overload relays in combination motor starters. The motor starter manufacturer generally specifies the R-Rated fuse size. These fuses are single, double, triple or quadruple barrels 3 inches diameter with end mounts designed for bolting directly to equipment bus or terminal pads.

Features/Benefits:

- The Amp-Trap Bolt-in series are UL Recognized.
 - Bolt-in mounting for direct connection to bus or terminals.
 - Current-limiting for superior equipment protection.
 - Metal embossed catalog number and manufacturing date for lasting identification.
 - Blown-fuse indicator to give positive identification of open fuse.
- Amp-Trap: 3" Barrel 2 lb tripped force - 0.50 Inch

Highlights:

- R-Rated

Amp-Trap® DIN-Style Fuses

R-Rated IEC DIN style MV fuses

Amp-Trap® R-Rated DIN style fuses are current-limiting, high interrupting rating fuses, intended for the short circuit protection of medium voltage motors and motor controllers. This product range offers North American R-Rated performance in the IEC 282-1 DIN mounting configuration of 442mm. R-Rated fuses are applied as back up fuses that have a minimum interrupting rating, and must be coordinated with overload relays in combination motor starters. Amp-Trap R-Rated, DIN type fuses are offered in voltage ratings of 3.3kV, 5.3kV and 7.2kV in ratings from 2R to 19R. All fuses within this product group are UL component recognized.

Features/Benefits:

- Clip mount DIN 45: R-Rated fuses with North American ANSI characteristics in a standard DIN 442mm size.
- Current-limiting for superior equipment protection
- Blown fuse indicator provides positive identification of open fuse.
4.5lb tripping force - 1.0" inch.

Highlights:

- R-Rated
- UL recognized

Applications:

- Short circuit protection of medium voltage motors and motor controllers.

Definitions:

R-Rating: R-Rated fuses are back-up fuses that operate as follows (Per ANSI C37.46-2000): An R-Rated fuse will melt in the range of 15 to 35 seconds at a value of current equal to 100 times the "R" rating.

Back-up Current-Limiting Fuses: A back-up current-limiting fuse is a fuse that can interrupt any current between its rated minimum interrupting current and its maximum interrupting current. Back-up fuses are not designed or intended to open under overload conditions.

Continuous Ampere Rating at 40°C: The continuous amp rating defines the thermal capability of the fuse per ANSI C37.46 and should not be the sole factor in fuse selection.

Amp-Trap® and 9F60 Series PT Fuses

0.625kV – 2.4kV – 2.75kV – 4.8kV – 5.0kV – 5.5kV – 7.2kV – 8.25kV and 15.5kV ferrule mounted fuses:

Mersen PT fuses are current-limiting fuses with high interrupting rating, used for the primary winding protection of potential transformer. They are small dimension ferrule type fuses and mount in standard clips. Current ratings are from 0.25A to 5A.

Features/Benefits:

- Ferrule mounting for standard clips and interchangeability with other brands of fuses.
- Current-limiting for superior equipment protection.
- Non-venting for silent operation.
- Metal embossed catalog number and manufacturing date for lasting identification.
- Blown-fuse indicator to give positive identification of open fuse fuse is available on the 9F60 series.

Applications:

- Primary protection for potential transformers (PT) or control power transformers (CPT).

Capacitor Protection

Amp-Trap® and 9F60 Series

Medium voltage capacitor fuses:

Mersen capacitor fuses are designed to ANSI C37-41. They are current-limiting operating without noise or discharge and are designed to be used indoors in a general purpose enclosure or outdoors in a weatherproof enclosure. These are non-disconnecting fuses requiring the use of a disconnect switch. These capacitor fuses provide both short circuit and overload protection and are intended to protect against capacitor case rupture or dielectric failure within the capacitor.

The various mounting configurations offer manufacturers a wide range of cost and space saving solutions and a large choice of equivalent products to users.

Features/Benefits:

- High interrupting capacity
- Current limitation
- Blown-fuse indication
- Direct mount
- Clip style mount
- Bus mount
- Non-venting for silent operation

Applications:

- Capacitor Protection
- Power Factor Correction Equipment
- Harmonic Filtering Equipment
- Induction Heating System
- High Power Drive
- Welders

9F60RJD040	40A						
9F60RJD080	80A						

9.52kV Capacitor fuses – 9F60 series, EJO-5

12" (305 mm) Clip Centers clip-in mounting* - Suitable for use indoors or outdoors

Catalog No.	Amp Rating	No. of Barrels	Indicating	Diameter Inches (mm)	Length Inches (mm)	Max Voltage	Max IR RMS Sym
9F60RJF015	15A	1	Yes	2.08 (20.8)	14.0 (356)	9.25 kV	50kA
9F60RJF025	25A						
9F60RJF040	40A						

*EJO-5 Capacitor fuses are typically mounted directly on the capacitor.

Distribution Transformer Protection

Sure Guard 9F59U Series ETP Fuses

8.3kV / 15.5kV / 23.0kV ETP fuses

The Sure Guard ETP back-up current-limiting fuses are designed to protect distribution transformers and are used in series with another protective device (such as an expulsion fuse). This combination limits the high-fault current to a safe level, thus providing protection through the complete range. As its name implies, the “ETP” is for External Transformer Protection. For conventional transformers protected by expulsion-fuses cutouts, the ETP can be installed in series with the cutout. For self protected transformers, the ETP can be applied on the high-voltage bushing in series with the internal transformer expulsion fuse.

Features/Benefits:

- Various hardware options.
- Current-limiting for superior equipment protection.
- High fault current interrupting capability: I.R. Sym = 50kA at ETP voltage rating.

Highlights:

- Outdoor use

Applications:

- Overhead distribution systems

Definitions:

Back-up Current-Limiting Fuses:

A back-up current-limiting fuse is a fuse that can interrupt any current between its rated minimum interrupting current and its maximum interrupting current. Back-up fuses are not designed or intended to open under overload conditions.

Hardware Options:

Fig. 1. Adapter only
9F59AAW007

Fig. 2. Eyebolt only,
for 6-2/0 cable
9F59AAW008

Fig. 3. Parallel groove only,
for 2/0 to 250MCM cable
9F59AAW009

Ratings:

9F50UBC:

Volts : 8.3kV AC

9F50UBD:

Volts : 15.5kV AC

9F50UBE:

Volts : 23.0kV AC

IEC Standard Back-Up Fuse-Links

3 / 7.2 kV – 6 / 12 kV – 10 / 17.5 kV – 10 / 24 kV – 20 / 36 kV Ferrule German DIN Standard

Beyond our line of ANSI / IEEE current-limiting fuses, Mersen offers a full line of medium voltage fuse links according to the IEC standards. Among them, the back-up current-limiting fuse-links designed according to IEC 60 282-1 and meeting DIN 43 625 fuse-link dimensions. These fuse-links' operating range is between their minimum interrupting rating (I3) and their maximum interrupting rating (I1). When necessary, we offer these fuses with a controlled power dissipation (CPD) feature. These type CPD fuse-links, prevent overheating of the fuse compartment when installed in conjunction with a load break switch.

Features/Benefits:

- Conform to IEC 60-282-1 which is identical to German standard VDE 0670T4
- Conform to DIN 43 625: High voltage fuse-links rated voltage 3.6 to 36kV (Fuse-link dimensions)
- Blown-fuse indicator: The strikers of the MV fuse-links mentioned here have an effective length of 27mm and are a "medium type." This classification results from the energy released by the striker during the first 20 mm of operating distance. The initial force is about 80N and the force at the end of the course (27mm) is 15N.

Highlights:

- Outdoor use
- High breaking capacity
- High current limitation

Applications:

- Protection of transformers and distribution systems.

Definitions:

Back-up Fuse-links: Back-up fuse links have a rated minimum breaking capacity current above which the fuses are able to interrupt current. Back-up fuses are not designed to operate below their minimum breaking current (below I3). Their operating range is between their minimum interrupting rating (I3) and their maximum interrupting rating (I1). If protection is required for currents below I3, additional protection must be provided.

Rated Voltage Range: Medium voltage fuse links must operate at the voltage range for which they have been rated. When a current-limiting fuse clears a fault, the element melts and an arc is formed across the gap. The higher the fuse voltage rating, the higher the arc voltage will be and it will always be greater than the voltage rating of the fuse. Replacing a fuse in equipment with a fuse of a higher voltage rating can be destructive for the equipment. The rated voltage range provides the permissible voltage limits top and bottom the fuse can be used at.

Breaking Capacity I1: The breaking capacity is also referred to as the "rated maximum breaking current". This is the maximum current which can be interrupted by the fuse-link.

Ratings:

Size (L) 192:

Volts : 3/7.2kV AC

Amps : 2A to 200A

Size (L) 292:

Volts : 6/12kV AC

Amps : 1A to 200A

Size (L) 367:

Volts : 10/17.5kV AC

Amps : 6.3A to 100A

Size (L) 442:

Volts : 10/24kV AC

Amps : 1A to 200A

Size (L) 537:

Volts : 20/36kV AC

Amps : 2A to 63A

Size (L) 292:

Volts : 6/12kV AC

Amps : 1A to 200A with CPD

Size (L) 442:

Volts : 10/24kV AC

Amps : 1A to 125A with CPD

IEC Standard Back-Up Fuse-Links

Definitions - Continued:

Minimum Breaking Capacity I3:

The minimum breaking current is referred to as the “rated minimum breaking current”. Back up fuses are not designed or intended to open below I3.

Control Power Dissipation:

Due to abnormal circumstances such as lightning strikes or atypical transformer inrush, some of the fuse elements can be damaged. The remaining elements will have to carry more current causing the fuse to dissipate significantly more heat. When these fuses are enclosed in a narrow fuse compartment that has limited thermal power acceptance, there is risk this may be exceeded. Type CPD fuse-links prevent such overheating. The CPD striker system releases the transformer switch before the permissible power acceptance of the fuse compartment is exceeded. The fuse should then be replaced.

Accessories:

Mersen offers clips, indoor and outdoor fuse supports along with signaling systems:

Fuse clips:

Size 45mm with connection lug: Cat # MR45R

Size 45mm without the connection lug: Cat # MR55R

Flexible microswitch voltage range 12 / 36 kV:

1 NO/NC Ref # E092855

2 NO/NC Ref # F092856

Indoor and Outdoor Fuse Support:

Indoor fuse support: SI240V442 Outdoor fuse support: SE240V442

Accessories Type EK 9F61 Series

Fuse supports, fuse disconnect switches and accessories from 2.4kV to 38kV

Fuse supports, non-disconnecting, are used primarily in potential transformer circuits, or where there is some other disconnecting or isolating device in series with the fuse in the circuit. Disconnecting switch devices have the additional feature of serving to isolate the equipment they protect. It should be noted that disconnecting switches are not load-breaking devices, therefore, the circuit must be open prior to the fuse disconnection. Select either a fuse support or a disconnecting switch for each fuse. Fuse supports and disconnecting switches include live parts for both ends. Both fuse supports and fuse disconnect switches can be mounted vertically or horizontally. The type EK are used for indoor installations while the type EKO are used outdoors.

Indoor:

Fuse supports: EK-1
 Fuse disconnect switches: EK-3

Outdoor:

Fuse supports: EKO-1
 Fuse disconnect switches: EKO-3

Fuse Size	Ferrule Diameter
B	1-9/16 inches
C	2 inches
D	3 inches
DD	two-3 inch in parrallel
DDDD	four-3 inch in parrallel
EE	two-4 inch in parrallel

The letter suffix following the (-1) or the (-3) shows the fuse size.

When selecting a mounting for a current-limiting fuse, it is necessary that the clip centers and size agree with the fuse selected.

For further detailed information regarding these fuse supports and disconnecting switches such as storage, mounting and maintenance, please refer to INST-EK39196 available on our website at ep-us.mersen.com or ask your sales representative for a hard copy.

For the 3" ferrule diameter we also offer the Cat # 228-700-530 clips. These spring reinforced clips will accommodate one and two barrel 3-inch diameter medium voltage ferrule type fuses. The clip and reinforcing spring are intended to be bolted to a copper busbar through two .41" and 1.06" slots. A minimum copper-bus section of 1/4" x 1-1/2" is recommended for maximum ratings of 24R and 450E. The Cat # 228-700-530 is for one pair of clips, enough for one fuse.

Medium Voltage Controllable Fuse

Intelligent Fuse Technology

15.5 kV, Ferrule-mounted

Mersen's new Medium Voltage Controllable Fuse (MVCF) System is designed to mitigate the Arc-Flash hazard on the low-voltage side of a medium voltage transformer. The industry's first fuse to provide normal short-circuit and overload protection while having the capability to open on command, this fuse is a cost effective arc flash solution with minimal installation downtime.

Applications:

- Primary protection for a 12.0kV to 15.5kV/480V, 750kVA, 1000kVA, and 1500kVA transformer
- New or existing MV fuse cabinets
- Where Arc-Flash protection on the secondary is desired

Features and Benefits:

- **Fuses fit into existing clips and space** – The retrofit can be completed in minutes, provided fiber optic cable is already in place.
- **Lowest-cost Arc-Flash Mitigation Solution** – A turnkey installation of the MVCF will cost a fraction of other available alternatives
- **Exceptional Performance** -
 - 50kA short circuit interrupt rating
 - Fast response time mitigates the arc-flash energy to Category 2 PPE
- **Low Maintenance** – Fuses are designed to last 20 years with no maintenance intervals, and the battery lasts for 3 years
- **Flexible Design Interface** – Designed to be used with a variety of conventional Arc-Flash detection devices and relays
- **No Nuisance-tripping** - Actuator modules are programmed to ignore trip signals when primary current is below the fuse rating.
- **Corrosion-resistant** - Special heavy tin-nickel-copper plating offers the best whiskering and oxidation mitigation in the industry.
- **Automatically performs a system check every 3 days** - Confirms continuity on all FO lines
- **Minimal stress on other devices** – The fuse element softens the voltage spike that occurs when opening. Alternatives may generate an excessive spike that could damage transformer insulation or upstream devices
- **Small Power Cells** – The MVCF utilizes small batteries that fit inside the Controllable Fuse Actuator Module (CFAM) versus other solutions requiring multiple lead-acid car batteries

Ratings

- Volts** : 15.5kV maximum
Amps : 65A, 80A, and 100A
IR : 50kA RMS Sym

Medium Voltage Controllable Fuse

Intelligent Fuse Technology

How does the Intelligent Fuse System Work?

- The Mersen A155CNF Series operates like a normal MV fuse under short circuit and overload situations. When connected to an Arc-Flash detection system that is properly set up, the MVCF will open the circuit in time to limit the Hazard to Category 2 PPE.
- The Mersen MVCF System's Interface Module (CFIM) is mounted in the Low Voltage area and accepts a trip signal from the customer's existing Arc-Flash detection relay.
- The CFIM immediately sends a signal over fiber-optic cables to the Actuator Modules (CFAM) attached to the bottoms of the fuses in the Medium Voltage cabinet.
- The CFAM then causes a switch within the fuse to open. This shunts the current through a much smaller fuse element that opens the circuit in a controlled manner.

Medium Voltage Controllable Fuse (A155CNF065, A155CNF080, and A155CNF100)

Controllable Fuse Actuator Module (CFAM-100)

Controllable Fuse Interface Module (CFIM-100)

Batteries are available from Mersen.
Use catalog number BATTCP1225.

International Fuses

A world of circuit protection solutions — in your backyard

Your problem:

For most of our customers, globalization isn't just a buzzword it's a reality with very tangible challenges for those in charge of purchasing, inventory, installations, repairs, and other operational duties. And that's true whether you're building, operating, or maintaining overseas manufacturing centers. Exporting equipment designed to be acceptable to overseas inspection authorities and electrical professionals. Or ensuring imported equipment is optimally installed and maintained.

Our solution: Mersen offers you the benefits of a truly global supplier. From the one-stop shopping advantages of our complete line of European and North American fuses, holders, and accessories. To our pursuit of other international technologies. To our definitive understanding of international circuit protection standards such as those of the IEC and CENELEC.

Want more information fast? For more technical or application-specific information, please call our International Fuse experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

gl-gG, aM Cylindrical Fuse-Links

Domestic and industrial cylindrical fuse-links

Mersen gl-gG and aM fuse-links cover a wide range of physical sizes and ampere ratings for 400, 500, and 690 volts AC. gl-gG and aM fuse-links are for industrial applications. Most ratings are available with an optional indicator. All industrial fuse-links have the option of a built-in striker. All cylindrical fuse-links have ceramic bodies and silver-plated ferrules.

gl-gG

Full Range Protection

- 4 physical sizes from 8 x 31mm to 22 x 58 mm
- 400, 500 and 690 Volt ratings - 0.5A through 125A
- Most ratings available with indicator
- Meet IEC, NFC and UNE standards
- Approved by Lloyds Register of Shipping and Bureau Veritas

aM

Short Circuit Protection

- 4 physical sizes from 8 x 31mm to 22 x 58mm
- 400, 500 and 690 Volt ratings - 16A through 125A
- Most ratings available with indicator
- Meet IEC, NFC and UNE standards
- Approved by Lloyds Register of Shipping and Bureau Veritas

gl-gG

Full Range Protection Fuse-links with Striker

- 2 sizes-14 x 51mm and 22 x 58mm
- 400, 500 and 690 Volt ratings - 4A through 125A
- All ratings include striker
- Meet IEC, NFC and UNE standards
- Approved by Lloyds Register of Shipping and Bureau Veritas

aM

Short Circuit Protection Fuse-links with Striker

- 2 sizes - 14 x 51mm and 22 x 58mm
- 400, 500 and 690 Volt ratings - 2A through 125A
- All ratings include striker
- Meet IEC, NFC and UNE standards
- Approved by Lloyds Register of Shipping and Bureau Veritas

DO Type (NEOZED)

400 Volt DO Type NEOZED fuse-links, screw caps and fuse bases

Mersen DO fuse-links, also called Neozed type, are 400 Volts AC rated with 100kA interrupting rating. They have 3 physical sizes, DO1, DO2, and DO3 and fit into special screw caps. All fuse-links have blown-fuse indicators which are visible through the screw cap when mounted. Screw caps fit onto single and three-pole bases which are screw or DIN rail mounted. All accessories such as covers and gauge rings are described.

D Type

500 Volt D-type fuses, screw caps, and fuse bases

Mersen D-type fuses are 500 Volts AC/DC rated with 75kA interrupting rating. They have 5 physical sizes (NDZ, DII, DIII, DIV, and DV) and fit into special screw caps. All fuses have blown-fuse indicators which are visible through the screw cap. Screw caps fit onto single pole bases which are screw or DIN rail mounted. All accessories such as covers, adapter rings, and gauge rings are described.

NH Dimension Knife-Blade fuse-links, fuse bases, and accessories

Mersen NH Fuse-links, sizes 000, 00, 0, 1, 2, 3, 4 and 4a are rated 500 or 690 Volts AC with breaking capacities of 80kA or 120kA. All fuse-links include an indicator or striker and can accept a microswitch for remote signaling. They all have silver-plated knife blades and ceramic bodies. Accessories include 1, 2, 3 or 4-pole bases, barriers, shields, terminals, microswitch, etc.

gG

Full Range Protection

- Sizes 000, 00, 0, 1, 2, 3, 4, 4a
- 500 and 690 Volt ratings - 2A through 800A
- All ratings include indicator
- All equipped for microswitch mounting

gG

Full Range Protection Fuse-links with Striker

- Sizes 0, 1, 2, 3
- 500 and 690 Volt ratings - 32A through 630A
- All ratings include striker

Class C Canadian Fuses

Class C fuses

Mersen Class C fuses have British standard (BS88) dimensions and are exact replacements for the British fuses and older HRCII-C fuses. Class C fuses are not dimensionally or electrically interchangeable with other North American fuses. They feature ceramic bodies and bolt-in mounting. They are for short-circuit protection only, in motor controllers, for example, where overload protection is provided by an overload relay.

* Ceramic version available upon request

Highlights:

- BS88 dimensions
- Fast-acting

Applications:

- Short circuit and back-up protection of motor controllers and components

Class H NRN/NRS/Canadian Fuses

NRN & NRS non-time delay fuses

Mersen NRN (250V) and NRS (600V) fuses are standard non-time delay fuses, with a 10kA short circuit rating. 250 Volt NRN15 through NRN60 fuses are certified as Type "P" fuses, satisfying the Canadian Electrical Code for low melting-point non-time delay fuses. Also qualifying for Type "P" are OTN15 through OTN60, which are Class K-5 fuses with a 50kA short circuit rating (found in the OT/OTS section of this catalog).

Class H CRN/CRS/Canadian Fuses

CRN & CRS time delay fuses

Mersen CRN and CRS fuses are standard fuses, Type "D", with 10kA short circuit rating. Type "D" fuses satisfy the Canadian Electrical Code requirement for low melting-point fuses.

Special Purpose

A world of circuit protection under one roof.

Your problem:

Parallel cables from your main transformer.

The welding station down in the machine shop. Need a fuse designed specifically to

protect your solar power installation? Applications as varied and specialized as telecommunications systems, forklifts, and DC-powered equipment . . . If your plant is like most, it's full of highly specialized circuit protecting applications. Still, as specialized as the installations sometimes are, they have in common the need for a high performance, failsafe solution.

Our solution: No matter how specialized your application is, Mersen brings its broad expertise and numerous resources to bear on it. The result is a line of Special Purpose Fuses that unfailingly perform to application-specific requirements. Whether you're specifying our Helio Protection fuses, Cable Protectors, Welder Protectors, and Telecommunications fuses — or replacing our Form 600 fuses, or Forklift Truck fuses.

Want more information fast? For more technical or application-specific information, please call our special purpose products experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

CP 600V Cable Protectors

Cable Protectors

Mersen CP Cable Protectors are special purpose limiters which are crimped or bolted to cables or terminals to clear and isolate faults quickly, increasing the reliability of service entrance and distribution runs. CP Cable Protectors have a 200,000A interrupting rating, yet will carry low cable overloads which are handled by standard protective devices. Cable protectors are rated in terms of cable size and material (Al or Cu). Heavier duty CPH cable protectors are available on special order. Heat shrinkable (HS) tubing can be specified for field installation. TI blown fuse trigger indicators may be available upon request. Refer to the application information section for more information.

Features/Benefits:

- Fiberglass bodies for dimensional stability in harsh environments
- Catalog number stamped into terminal for permanent identification
- Crimp terminals for aluminum cable include oxide inhibitor
- Molded rubber boots or heat shrinkable tubing available for insulation and protection
- Current limiting device
- Permitted by National Electric Code

Catalog Numbering System

*Please consult factory for special terminations.

2CL 250V Cable Protectors

250V Cable Protectors

Mersen 2CL Cable Protectors are special purpose limiters which are crimped or bolted to cables or terminals to clear and isolate faults quickly, increasing the reliability of service entrance and distribution runs. They are 250VAC current limiting with a 200,000A interrupting rating, yet will carry low cable overloads which are handled by standard protective devices. These cable protectors are rated for both copper and aluminum cabling per their corresponding cable size.

Features/Benefits:

- Fiberglass bodies for dimensional stability in harsh environments
- Catalog number stamped into terminal for permanent identification
- 250VAC Rated
- Shorter in length, smaller dimensions than standard 600VAC rated cable limiters

A60C Low Voltage Capacitor Fuses

600V Low Voltage Capacitor Fuses

Mersen low voltage capacitor fuses provide advanced safety for power correction and harmonic filtering equipment. A capacitor fuse isolates a shorted capacitor before it can damage surrounding equipment or personnel. Typical capacitor failures occur when the internal dielectric can no longer withstand the applied voltage, resulting in a low impedance current path and generating excessive heat and pressure that can cause violent case rupture. Mersen low voltage capacitor fuses will isolate the shorted capacitor before case rupture occurs while routinely withstanding inrush current at startup.

Features/Benefits:

- High interrupting rating
- Current-limiting
- Capacitor inrush withstand capability
- Direct mount
- Optional blown fuse indication

A4BX Welder Protectors

Welder protectors

Mersen Welder Protectors are special purpose limiters used to provide isolation of faulted welding equipment and protection for the cable drop supplying the welder. Welder Protectors have a high thermal capacity and are less affected by high ambient temperatures and extended weld times than similar size Class J, K, or R fuses*. Welder Protectors should only be applied for isolation of short circuited welding circuits. Overload protection must be provided for by other means.

*Contact factory for Class L sizes and ratings.

A2Y/A6Y Form 600

Form 600 fuses

Mersen Form 600 fuses are the original current-limiting fuses, pre-dating all the standards. Their 500V DC rating (through 600A) is a useful feature for special fusing applications. Form 600 fuses provide a high degree of current limitation in AC and DC applications. Types 1 and 3 are dimensionally interchangeable with Class H and K fuses. Types 4 and 5 have unique rejection dimensions and are not interchangeable.

Forklift Truck Fuses

Mersen Forklift Truck and Battery Isolator fuses are specially designed for the heavy duty loads associated with DC battery powered equipment such as forklift trucks, hand trucks, motorized work platforms, and other DC battery operated systems. Rugged construction and stud mounted bolt-in design assure a long life in adverse conditions for these fuses. This expanded line of Forklift Truck Fuses can fulfill virtually all of your heavy duty circuit protection needs up to 125V AC or DC. The round body ACK, ACL and ALS fuses combine higher voltage ratings and more ampere ratings with higher interrupting ratings. The flat CNL and CNN style fuses have a lower voltage rating but are also AC and DC, more space saving and have visual “see-thru” indication to show when they have operated.

Features/Benefits:

- All fuses are AC and DC rated
- Expanded ampere ratings
- Time-delay and general purpose types
- Link is visible through window (CNL/CNN)

Highlights:

- AC/DC ratings
- Embossed catalog No's.
- Stud mounted
- Time-delay - ACK
- General purpose - ACL,ALS

Applications:

- Forklift trucks
- Battery hand trucks
- Motorized work platforms
- Battery systems

Recommended Fuse Blocks for Forklift Truck Fuse Fuses

Fuse	Fuse Block
ACK(70-100)	P243C
ACL(70-120)	P243E

HP6M 600V DC Midget (10x38mm) Photovoltaic Fuses

About the HP6M Fuse

Mersen's HP6M photovoltaic (PV) fuse series was engineered and designed specifically for the protection of photovoltaic systems. Its enhanced fuse construction makes it ideal for continuous temperature and current cycling withstand adding to system longevity. The 600VDC rated HP6M, designed for low minimum breaking capacity capabilities of 1.35 times the fuse rated current value, allows for safe circuit interruption under typical low fault current conditions produced by PV arrays. Protect your off-grid or grid tied PV system from unexpected ground faults and line faults using Mersen's HeliProtection® fuse line.

Features/Benefits:

- Low fault current interrupting capability
- Durable construction for enhanced system longevity
- Temperature cycle withstand capability
- Guaranteed operation at temperature extremes
- Industries first UL Listed Solution
- Globally accepted

Applications:

- All photovoltaic applications
- PV string/array level protection
- Combiner box applications
- In-line PV module protection
- Inverters
- Battery charge controllers

HP6J 600V DC Class J Photovoltaic Fuses

About the HP6J Fuse

Mersen's HP6J photovoltaic (PV) fuse series was engineered and designed specifically for the protection of photovoltaic systems. Its enhanced fuse construction makes it ideal for continuous temperature and current cycling withstand adding to system longevity. The 600VDC rated HP6J designed for low minimum breaking capacity capabilities of 1.35 times the fuse rated current value allows for safe circuit interruption under typical low fault current conditions produced by PV arrays. Protect your off-grid or grid tied PV system from unexpected ground faults and line faults using Mersen's Helio Protection fuse line.

Features/Benefits:

- Smallest footprint in the industry
- UL class J dimensions
- Low fault current interrupting capability
- Durable construction for enhanced system longevity
- Temperature cycle withstand capability
- Guaranteed operation at temperature extremes
- Industries first UL Listed Solution
- Globally accepted

Applications:

- Re-combiner (sub-combiner, array combiner, master combiner) applications
- Inverter DC input protection
- Battery charge controllers

HelioProtection®

HP10J 1000V DC Class J Photovoltaic Fuses

The industry's most efficient 1000VDC fuses

Mersen's HP10J photovoltaic (PV) fuse series was engineered and designed specifically for the protection of photovoltaic systems. Its enhanced fuse construction makes it ideal for continuous temperature and current cycling withstand adding to system longevity. The 1000VDC rated HP10J designed for low minimum breaking capacity capabilities of 1.35 times the fuse rated current value, allows for safe circuit interruption under typical low fault current conditions produced by PV arrays. Protect your off-grid or grid tied PV system from unexpected ground faults and line faults using Mersen's HelioProtection® fuse line.

Features/Benefits:

- UL Listed to standard 2579 – Photovoltaic Fuses
- Smallest available footprint in the industry
- Enlarged mounting holes
- Low fault current interrupting capability
- Durable construction for enhanced system longevity
- Temperature cycle withstand capability
- Guaranteed operation at temperature extremes
- Blown fuse indicator options available (EI option)
- 200A to 400A available in NH3 mounting

Applications:

- Re-combiner box (sub-combiner, array combiner, master combiner) applications
- Inverter DC input
- Battery charge controllers

About the HP10NH Fuse

Mersen's HP10NH photovoltaic (PV) fuse series was engineered and designed specifically for the protection of photovoltaic systems. Its enhanced fuse construction makes it ideal for continuous temperature and current cycling withstand adding to system longevity. The 1000VDC rated HP10NH designed for low minimum breaking capacity capabilities of 1.35 times the fuse rated current value, allows for safe circuit interruption under typical low fault current conditions produced by PV arrays. Protect your off-grid or grid tied PV system from unexpected ground faults and line faults using Mersen's HelioProtection® Fuse line.

Features/Benefits:

- Global acceptance
- Low fault current interrupting capability
- Durable construction for enhanced system longevity
- Temperature cycle withstand capability
- High efficiency with low power losses

Applications:

- Re-combiner box (sub-combiner, array combiner, master combiner) applications
- Inverter DC input
- Battery charge controllers

HP15G 1500VDC Class G (10x57mm) Photovoltaic Fuses

Engineered to protect photovoltaic applications

Mersen's HP15G photovoltaic (PV) fuse series was engineered and designed specifically for the protection of photovoltaic systems. Its enhanced fuse construction makes it ideal for continuous temperature and current cycling withstand adding to system longevity. The 1500VDC rated HP15G, designed for low minimum breaking capacity capabilities of 1.35 times the fuse rated current value, allows for safe circuit interruption under typical low fault current conditions produced by PV arrays. In addition to the standard ferrule terminal, a unique wire crimp terminal (CC option) permits solderless wire-to-fuse connection for overmold encapsulation of fuse and wiring. Protect your off-grid or grid tied PV system from unexpected ground faults and line faults using Mersen's Helio Protection fuse line.

Features/Benefits:

- Low fault current interrupting capability
- Durable construction for enhanced system longevity
- Temperature cycle withstand capability
- Guaranteed operation at temperature extremes
- Industry's first UL Listed Solution
- Globally accepted

Applications:

- In-line PV module protection

HP15M 1500VDC Midget (10x85mm) Photovoltaic Fuses

Engineered to protect photovoltaic applications

Mersen's HP15M photovoltaic (PV) fuse series was engineered and designed specifically for the protection of photovoltaic systems. Its enhanced fuse construction makes it ideal for continuous temperature and current cycling withstand adding to system longevity. The 1500VDC rated HP15M, designed for low minimum breaking capacity capabilities of 1.35 times the fuse rated current value, allows for safe circuit interruption under typical low fault current conditions produced by PV arrays. Protect your off-grid or grid tied PV system from unexpected ground faults and line faults using Mersen's Helio Protection fuse line.

Features/Benefits:

- Low fault current interrupting capability
- Durable construction for enhanced system longevity
- Temperature cycle withstand capability
- Guaranteed operation at temperature extremes
- Globally accepted
- Recommended Fuse holder: US15M1HEL

Applications:

- All photovoltaic applications
- PV string/array level protection
- Combiner box applications
- In-line PV module protection
- Inverters
- Battery charge controllers

Ratings:

Volts : 1500VDC
Amps : 4A - 32A
SCCR : 50kA

HP15NH 1500V DC gPV Photovoltaic Fuses

1500VDC for Future Trends and Higher Efficiencies

Mersen's HeliProtection HP15NH photovoltaic (PV) fuse series is designed specifically for protection of photovoltaic arrays. Low minimum breaking capacity of 1.35 times the fuse rated current value meets both IEC and UL (pending) standards, allowing for safe circuit interruption under typical low fault current conditions produced by PV arrays. Typical applications include re-combiner box, master combiner box and inverter inputs.

Fuse Blocks & Holders

“Finger-safe” IEC, Traditional, Panel Mount... You name the block, we’ve got it in stock.

Your problem:

You need a range of standard fuse blocks to meet industrial requirements. You need DIN-rail mounting fuse holders that save space and conform with today’s “Finger-safe” IEC standards. You need panel-mount fuse holders, blocks that safely handle stress on conductors, accessories to make pulling fuses safer.

Our solution: Mersen’s extensive line of fuses is matched by our line of fuseblocks. Need a durable Class H, K, or R block? We’ve got configurations that accept nearly all 250 and 600V power fuses. How about Class CC or Class J IEC-style holders? Turn to our popular UltraSafe™ models for the small footprints, blown-fuse indicators, and finger-safe changeouts you want. The same goes for traditional Class J blocks, space-saving “SJ” blocks, 600V Class CC and midget dimension holders, and a dozen other fuse holder solutions.

Want more information fast? For more technical or application-specific information, please call our Fuse Block experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

USCC & USM UltraSafe™ Fuseholders

UltraSafe modular fuseholders for midget and class CC fuses

Mersen UltraSafe Modular Fuseholders introduce a new level of safety for Class CC (USCC) and Midget 1-1/2" x 13/32" (USM) AC and DC-rated fuses up to 30 amperes. UltraSafe holders qualify as "Finger-safe" under IEC and DIN standards to an IP20 grade of protection, including fuse changing (with the flick of a finger). UltraSafe holders are available in 1, 2, 3 or 4 poles, with or without visual blown-fuse indicators in each pole. Multi-pole units can also be field assembled by ordering pin-tie handles.

UltraSafe holders save up to 15% mounting space and any combination can be snapped onto 35mm DIN-rail for extra savings in panel building time. UltraSafe holders with Class CC fuses chosen for Type "2" No Damage protection give one of the safest protection packages in the industry. UltraSafe body material is tough and durable polyamide, with exceptional insulating properties.

Highlights:

- IP20 Finger-Safe (touch safe)
- Optional visual blown fuse Indicator lights
- DIN-rail mounting
- Compact footprint
- Quick, tool-free, easy fuse change outs

Applications:

- All circuits up to 600 volts for motors, control circuits, transformers, etc...
- DC circuits up to 1000VDC including photovoltaic applications
- Non-load disconnect

Recommended Fuse Usage:

- **USM use with:**
ATQ, ATM*, A6Y-2B, A25Z-2, TRM, OTM, A13X-2, A60Q-2, DCT*, HP6M, HP10M
- **USCC use with:**
ATDR, ATMR*, ATQR

* Recommended for DC applications

Additional Specifications:

Terminal screws: Phillips/slot head

Suggested screw torque: 14.75 in-lbs.

Wire range: #14 to 6 AWG (2.5 to 16mm²) single conductor
: #14 to 10 AWG (2.5 to 5.0 mm²) dual conductor

Wire type: 60/75/90°C solid/stranded copper

Connector type: Pressure plate

Load-break disconnect: No

Environmental: RoHS compliant, lead free

Operating temperature: -40° to 85°C

Watts loss: 3W or less

Flammability rating: UL 94-V0

Optional Blown Fuse Indicator Lens Color: Red

Ratings:

USBB UltraSafe™ Bus Bar System

Bus bar systems for use with UltraSafe class CC (USCC) and midget (USM) fuseholders.

Mersen USBB UltraSafe bus bar systems are intended for use with UltraSafe Class CC (USCC) and Midget (USM) fuseholders. The USBB delivers safe and reliable combination of circuits in a compact design. Bus bar systems reduce installation time when compared to wire solutions, offer space savings and deliver touch-safe, shock resistant solutions to panel builders and designers. 1-, 2-, and 3-phase designs available.

Highlights:

- Decrease installation time compared to wire solutions
- Save panel space with compact design and footprint
- Reduce shock hazards with touch-safe cover (included)
- Environmentally conscious, RoHS compliant and lead free
- Cuttable design offers flexibility

Applications:

- UL 508 panels
- Solar string combiner boxes
- Control panels
- Power distribution panels

USGCC & USGM UltraSafe™ Fuseholders

Innovative UltraSafe class CC and midget fuseholders with screw-less, spring pressure, wire termination technology.

Mersen's new USGCC & USGM series fuseholders deliver the ultimate ease-of-use, time (labor) saving and reliable solution available in the marketplace. Mersen is the first manufacturer to offer screw-less, spring pressure, wire termination technology into a power fuseholder, delivering the best of both technologies to its customers. Now you can experience the combined benefits of safety, ease-of-use, labor savings and reliability of UltraSafe fuseholders and spring pressure technology.

Highlights:

- Equipped with industry proven, patented WAGO CAGE CLAMP® technology (over 25 years of field experience and acceptance)
- Reduce wire installation time by up to 75%
- Highly reliable, maintenance free wire contact
- Secure, vibration proof, corrosion resistant, temperature cycling resistant, cost saving wire connection
- Quick, tool-free, easy fuse change-outs
- IP20 finger-safe protection
- Option visual blown fuse indicator
- DIN-rail mounting
- Compact footprint
- Environmentally conscious, RoHS compliant and lead free

Additional Specifications:

- Screw-less, spring pressure terminals: WAGO CAGE CLAMP®
- Wire Range : #14 to 6 AWG (2.5 to 16mm²) Single Conductor
: #14 to 10 AWG (2.5 to 5.0 mm²) Dual Conductor
- Wire Type : 60/75/90°C Solid/Stranded Copper
: Can be used with wire ferrules
- Wire Strip Length: 12-13 mm (0.49 in)
- Load-Break Disconnect: No
- Environmental: RoHS compliant, Lead Free
- Operating Temperature: -40 to +85°C
- Watts Loss: 3W or less
- Flammability Rating: UL 94-V0
- Optional Blown Fuse Indicator Lens Color: Red

Applications:

- All circuits up to 750VAC / 1000VDC for power control, power distribution and power electronics
- Non-load disconnect

Recommended Fuse Usage:

- **USGM** use with Midget Fuses: ATQ, ATM, TRM, OTM, A60Q-2, DCT-2
- **USGCC** use with Class CC Fuses: ATDR, ATQR, ATMR
- **USGM-HEL** use with **Photovoltaic Fuses: HP6M, HP10M**

USFM UltraSafe™ Fuse Modules

UltraSafe 3-pole fuse modules for midget and class CC fuses

Mersen UltraSafe™ Fuse Modules have a unique, compact design suited for use with 45mm wide IEC contactors. These modules also offer other features not found on other Class CC and midget UltraSafe fuse holders such as an auxiliary contact option. When the auxiliary is wired to an adjacent contactor the load is dropped out by the contactor immediately once someone tries to open the fuse extractor handle. Additionally, the fuse module features padlock capabilities, compact busbars for line side terminations, and tool free removal from DIN-rail. Yet the fuse modules still incorporate well known UltraSafe features such as IP20 protection, easy operating fuse extraction handles and an open fuse visual indication option.

Highlights:

- Dedicated 3-pole fuse module
- Finger-safe
- Compact footprint with 45mm width
- Auxiliary contact option (1NO/1NC)
- Ability to padlock in OPEN position with 1/4" shank diameter
- DIN-rail mount with tool free removal
- Quick, easy fuse change
- Optional indicator lights

Recommended Fuse Usage:

- USM use with:
ATQ, ATM*, A6Y-2B, A25Z-2, TRM, OTM, A13X-2, A60Q-2, DCT*
- USCC use with:
ATDR, ATMR*, ATQR

* Recommended for DC applications

Applications:

- Primarily for motor circuits to replace circuit breakers for higher SCCR ratings
- Other circuits up to 600 volts for control circuits, transformers, etc.
- Non-load disconnect
- Padlock compliance

Dimensions

Additional specifications:

Terminal screws: Pozidriv#2
 Suggested screw torque: 13 Lbs-in (1.5 N-m)
 Connector type: Pressure plate
 Wire range: #10 to #16 AWG (1-4 mm2)
 75°C solid/stranded Cu only

Load-break disconnect: No (when auxiliary contact is installed in fuse module and properly wired to adjacent IEC contactor the load will be dropped out prior to disconnection between fuse and clip inside holder upon operation of the fuse extractor handle).

US3J & US6J UltraSafe™ Class J Fuse Holders

UltraSafe™ modular fuse holders for class J fuses

Mersen UltraSafe Modular 600 Volt Fuse Holders for Class J fuses introduce a new level of safety and ease for installing or replacing Class J fuses. UltraSafe holders qualify as “finger-safe” to an IP20 grade of protection under IEC standards. The US3J accommodates 30A Class J or 22 x 58 mm French Ferrule* fuses. The US6J is for 60A Class J fuses. UltraSafe holders are available in compact 1, 2, or 3 pole units, with or without blown-fuse indicators in each pole. Multi-pole units can also be made up in the field by using the multiple-pole Assembly Kits. All units have provisions for locking in the open position for safety during fuse changeouts or equipment servicing. US3J and US6J holders can be snap-mounted to 35 mm DIN-rail and they have a unique latch which will stay open to allow re-positioning of the holder in the future. UltraSafe body material is tough and durable polyamide.

**Holder not UL listed when installed with French Ferrule fuses.*

Highlights

- Finger-safe IP20 protection
- Optional indicator lights
- DIN-rail mount
- Compact footprint
- Quick, easy fuse change

Applications:

- 600 volt motors, transformers, lighting, heating, control circuits, general loads
- Non-load disconnect

Recommended Fuse Usage:

US3J, US6J use with AJT, A4J, HSJ

Ratings:

- Volts** : 600VAC/DC
Amps : US3J - 30A Maximum
 : US6J - 60A Maximum
SCCR : 200kA

*Min. voltage to operate indicator light:
90VAC, 115VDC [Less than 0.7 mA leakage
current at 600V]*

Approvals:

- UL Listed, guide IZLT File E52283
- CSA Certified C22.2, class 6225 01, File 32169
- IEC certified 60269-1, 60947-3

US14 & US22

750 Volt UltraSafe™ Fuse Holders

UltraSafe modular fuse holders for 14 x 51 and 22 x 58mm fuses

Mersen UltraSafe™ modular 750 volt Fuse Holders offer the highest levels of safety and features for 14 x 51 mm and 22 x 58 mm fuses. Like all UltraSafe holders, they qualify as “finger-safe” to an IP20 grade of protection under IEC standards, including fuse changing (with the flick of a finger). The US14 and US22 ranges are available in 1, 2 or 3 pole units, with or without blown-fuse indicator lights in each pole.

These holders come standard with a mechanical indicator that shows fuse presence. If a striker fuse is used, this mechanical indicator will also indicate a blown fuse. Microswitches can be supplied with the holders (or ordered separately for field installation) to allow remote communication. These holders also feature padlocking capabilities, DIN-rail mounting with our unique latching system to allow re-positioning, and the capability to be joined as multiple poles in the field.

Highlights:

- Finger-safe
- Optional indicator lights
- Optional microswitches
- DIN-rail mount
- Compact footprint
- Quick, easy fuse change

Applications:

- All circuits up to 750 volts using semiconductor fuses for protection of small inverters, UPS systems, motor drives, etc.
- No-load disconnect
- IP20 requirements

Recommended Fuse Usage:

- US14 use with 14 x 51mm: A70QS, A70P, URC, URD
- US22 use with 22 x 58 mm: A70QS, URD

Ratings:

- Volts** : 750VAC/DC
- Amps** : 50A (14 x 51 mm)
: 125A (22 x 58 mm)
- SCCR** : 200kA

Approvals:

- All UltraSafe fuse holders meet the requirements of UL4248
- UL Recognized Component guide IZLT2, File E52283
- CSA Certified C22.2, class 6225, File 32169
- IEC Compliant (60269-1, 60947-3)

US15M1HEL UltraSafe™ Fuse Holders for PV Applications

Touch-safe design increases user safety

Mersen UltraSafe modular fuse holders introduce the next level of safety for Photovoltaic applications for 10x85mm fuses. UltraSafe fuse holders are finger safe up to an IP20 grade of protection, and the 10x85mm features a pull out, pivoting fuse carrier.

The US15M1HEL is designed with terminals to accept standard stock busbar eliminating the need for custom combed bus bar, saving cost, time and simplifying installation. The body features industry leading UL94V0 material, providing superior flammability rating with exceptional durability.

Features/Benefits:

- Bus bar termination clamp
- UL94V0 Material Flammability Rating
- Wire terminal for use with 90°C wire
- Wire range: 6-14 stranded, 10-14 solid. Copper wire only.
- IP20 Finger Safe
- Din Rail Mounting
- Recommended fuse usage: HP15M

Applications:

- All photovoltaic applications
- Combiner box applications

CLASS J 600 Volt Fuse Blocks

Mersen Class J fuse blocks accommodate all Class J fuses.

A choice of screw, pressure plate, box and special order stud connectors fit a wide range of stranded or solid copper or aluminum conductors. Insulators are either molded glass-filled polycarbonate (GFPC) or phenolic with verified dielectric strength in excess of 2500V. 30A, 60A and the new 100A SJ fuse blocks feature a unique adder block configuration which can be snapped onto 1-, 2-, or 3-pole blocks to form multi-pole segmented blocks of as many poles as desired. All fuse clips are made of high conductivity tin-plated copper, with a choice of spring-reinforced or non-spring reinforced clips. Space saving options are now available in the 30A and 100A configurations which are noted in the product selection tables.

Recommended Fuse Usage:

- Class J Blocks (600V) use with AJT, A4J, HSJ

Clip & Connector Types:

MIDGET & CLASS CC

600 Volt Fuse Blocks

600 Volt midget and Class CC fuse blocks

Mersen midget fuse blocks accommodate all 30 ampere 1-1/2" x 13/32" midget fuses. Class CC fuse blocks accommodate all 30 ampere Class CC fuses. A choice of box, screw, or pressure-plate connectors fit a wide range of stranded or solid copper wire. Insulators are glass-filled polycarbonate (GFPC) with verified dielectric strength in excess of 2500V. Fuse blocks feature a unique adder block which can be snapped onto 1-, 2- or 3-pole blocks to form multi-pole segmented blocks of as many poles as desired. All fuse clips are made of high conductivity tin-plated copper alloy.

Recommended Fuse Usage:

Midget Fuse Block use with ATQ, ATM, A6Y-2B, A25Z-2,

TRM, OTM, A15QS-2, GFN, GGU, A60Q-2, DCT

Class CC Fuse Block use with ATDR, ATMR, ATQR

Note: To convert 30A adder pole to single pole, use end barrier #U09322. To convert 60A adder pole to single pole, use end barrier #U09365.

* 1-pole, 30A block does not accept adder pole.

** Fuse blocks have copper box connectors and clips and are for copper wires only. These are specifically designed with the same coefficient of expansion as copper wire for improved heat cycling and meet or exceed OEM "no aluminum" specifications.

Recommended mounting screws for all 30A and 60A fuse blocks: #10 (.190" dia.)

CLASS T 300 & 600 Volt Fuse Blocks

300 & 600V Class T Fuse Blocks

Mersen Class T fuse blocks accommodate Class T fuses up to 600A. Insulators are either durable, glass-filled polycarbonate (GFPC) or phenolic with verified dielectric strength in excess of 2500V. Mersen is the only manufacturer to offer Class T blocks with copper connectors.

Features/Benefits:

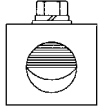

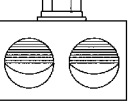

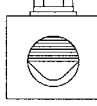

- Unique integral DIN-rail adapters for 600V, 30 & 60A blocks
- Full barrier design (30 & 60A) increases pole to pole safety
- Unique adder-block design (30 & 60A) for design flexibility
- Spring reinforcing standard for all 30 & 60A clips
- Features high conductivity copper alloy fuse clips
- Cool running high amperage (100 - 600A) connectors
- Copper connectors available 30 - 600A

Recommended Fuse Usage:

Class T Blocks (300V) use with A3T

Class T Blocks (600V) use with A6T

Dimensions

CLASS G 480 & 600 Volt Fuse Blocks

480 & 600V Class G Fuse Blocks

Mersen Class G fuse blocks accommodate all 15, 20, 30 and 60 ampere Class G fuses. A choice of box, screw or pressure-plate connectors fit a wide range of stranded or solid copper wire. Insulators are glass-filled polycarbonate (GFPC) with verified dielectric strength in excess of 2500V. Fuse blocks feature a unique adder block which can be snapped onto 1-, 2-, or 3-pole blocks to form multi-pole segmented blocks of as many poles as desired. All fuse clips are made of high conductivity tin-plated copper alloy.

Features/Benefits:

- Unique integral DIN-rail adapters for 15, 20 & 30A blocks
- Unique adder-block design (all ampere ratings) for design flexibility
- Spring reinforcing standard for 60A clips
- Features high conductivity copper alloy fuse clips

Recommended Fuse Usage:

Class G Blocks use with AG

Miniature Fuse Blocks

5X20QC1 & 6X32QC1 Single Pole Fuse Blocks

The 5X20QC1 single pole fuse blocks are for 5mm x 20mm fuses featuring tin-plated clips, a polyester insulator and 3/16" quick-connect terminals. The 6X32QC1 single pole fuse blocks are for 1/4" x 1-1/4" fuses and have tin-plated phosphor bronze clips, a phenolic insulator and 1/4" quick-connect terminals.

Features/Benefits:

5X20QC1

Single Pole Fuse Block
for 5mm x 20mm fuses

- Tin plated clips
- Polyester insulator
- 3/16" quick-connect terminals
- Rated 15A, 250V
- UL recognized

6X32QC1

Single Pole Fuse Block for
1/4" x 1-1/4" fuses

- Tin plated phosphor bronze clips
- Phenolic insulator
- 1/4" quick-connect terminals
- Rated 30A, 250V - UL Recognized

Recommended Fuse Usage:

5X20QC1 use with GGM, GGA, GSA, GSB, GDG

6X32QC1 use with GSA, GDL, GGC, GAB

Dimensions:

Ratings:

5X20QC1:

Volts: 250V

600 Volt In-Line Fuse Holders

Mersen's complete line of single and dual pole in-line fuse holders accommodate either 1-1/2" x 13/32" (10x38mm) midget or Class CC fuses. The fuse holders are designed for quick installation. Securing nuts or screws are captive thus speeding installation by reducing the need to locate and assemble loose components in the field. Three internal O-rings per pole seal the fuse holder providing a water-resistant compartment for the fuse. The captive O-rings are colored (blue for single pole and red for dual pole) for quick detection. Optional cone shaped insulator boots can be slipped on to provide a watertight seal (breakaway versions come with boots standard). Both single and dual pole versions have an optional breakaway feature which safely disconnects the load in case of a pole knockdown. Fuses remain safely encapsulated within the watertight fuse holder on the load side. Once the pole has been reinstalled the fuse holder can be easily reconnected.

Applications:

- Street lighting
- Parking lot lighting
- Traffic signaling
- Sports lighting
- Boats and marinas
- Humid/corrosive environments

Highlights:

- Breakaway version quickly disconnects line side during pole knockdown in compliance with state and federal highway commission standards
- 3 O-rings per pole for water tight applications
- Colored O-rings for quick detection
- Single and dual poles
- Accepts midget or Class CC fuses
- Wide assortment of terminal variations
- High heat, impact resistant insulator
- Captive nut or screw for quick installations
- Polarized dual pole provides simultaneous disconnection
- Permanently installed neutral versions quickly identified by white nuts
- Tulip fuse clip for improved contact and low losses
- Environmentally friendly-no lead solder used
- Highly visible catalog number even with insulation boots installed
- Wire gauge size identified on insulation boots for quick, accurate trimming
- Time delay for motor starting and transformer inrush

Recommended Fuse Usage:

FEB and FEX holders use with:

Midget (1-1/2" x 13/32", 10 x 38mm): ATQ, ATM, TRM, OTM, GGU, GFN, A13X-2, A25Z-2, A60Q-2, A6Y-2B

FEC and FEY holders use with:

Class CC: ATDR, ATMR, ATQR

Ratings:

- Volts:** : 600VAC / DC
Amps : 30A Maximum
SCCR : 200kA (Class CC Fuses)
: 100kA (Midget Fuses)

Temperature Rating 155° C

Approvals:

- UL Listed Class CC Guide IZLT, File E52283
- UL Recognized Component Midget Guide IZLT2, File E52283
- CSA Certified Class CC and Midget Class 6225, File 32169

FEB, FEC, FEX, FEY 600 Volt In-Line Fuse Holders

Catalog Numbering System

Family	Load Terminal		Line Terminal		Option
FEB-	1	1	1	1	-BA

Nomenclature Legend

Family	Description	Load or Line Terminal Type						Option Description	
		Terminal End View	Terminal	Type	Wire	No. Per	Solid		Stranded
FEB	Single pole midget		11	Cu Crimp	#8-#12	1	Yes	Yes	BA (breakaway version equipped with breakaway stud, breakaway boot, and insulating boots for both line and load sides)
FEC	Single pole Class CC		11	Cu Crimp	#12-#14	2	Yes	Yes

			91	Cu Double Set Screw	#2-#12	1 each	Yes	Yes	
			82	Al single Set Screw	#2-#12	1	Yes	Yes	
			92	Al double Set Screw	#2-#12	1 each	Yes	Yes	
			S	Cu Stud	N/A	1	N/A	N/A	

Notes:

1. Non-breakaway units do not include insulator boots. These optional cone shaped boots are available to provide a watertight installation. The insulator boots are designed to form a watertight seal over conductors, but due to varying wire insulation sizes it is suggested that tape wrap be utilized for best results.

FSB1 = Single conductor boot (used to cover all crimp type & single set screw terminals)

FSB2 = Double conductor boot (used to cover all double set screw (Y-type) terminals)

Insulator boot trimming instructions: Locate wire gage size to be utilized marking on the boot and cut just beneath it.

2. Tightening torque for single and double set screw terminations: 35 lbs.-in.

3. Tightening torque for dual pole fastening screw: 10-15 lbs.-in.

4. FEBN versions have a permanently mounted dummy fuse for neutral applications.

GPM SERIES Panel Mount Fuse Holders

Mersen GPM panel mount fuse holders are in sizes to accommodate Class CC and midget (1-1/2" x 13/32") fuses. All 30A holders have glass-filled thermoplastic insulators for extra dependability and trouble-free installation. Patented design allows same body to accept screw or bayonet knob. Flange design allows front or rear mounting.

GPM SERIES Panel Mount Fuse Holders

Mersen GPM panel mount fuse holders will accommodate 1/4" x 1-1/4" 3AG fuses and 5mm x 20mm fuses; most are approved by U.L. and CSA. Cap and body material is bakelite or polycarbonate and function as a screw-in or bayonet style closure. Finger-grip or screwdriver slots are available. All holders are rated for up to 250 volts with amp ratings ranging from 3A to 15A.

P243/P266/P292 Fuse Blocks

Fuse Blocks for Semiconductor Fuses

Mersen P243 and P266 series fuse blocks for Form 101 fuses are glass-filled polycarbonate or laminated phenolic insulator blocks with studs to accommodate bolt-in fuses. The P292 series has a laminated phenolic insulator base with fuse clips. All studs, clips and mounting hardware are tin or zinc plated.

1SC/1MSC

Modular Semiconductor Fuse Blocks

Mersen 1SC and 1MSC semiconductor fuse blocks feature modular mounting that offers greater flexibility in adjusting to various fuse lengths. Both stud type and integral box connector versions are offered to allow for user preference of wire terminations. The integral box connector versions also provide for greater heat dissipation. Mounting hardware is supplied with the blocks.

Semiconductor Fuse Holders

750V Semiconductor Fuse Holders

Mersen semiconductor fuse holders feature open face styles. Each version is rated 750 volts and accommodates 14 x 51 mm or 22 x 58 mm fuses. 703, U705 and U710 holders feature Mersen's unique adder-block design which can be snapped onto 1-, 2-, or 3-pole blocks to form multi-pole segmented blocks of as many poles as desired. A choice of box, screw or pressure plate connectors is offered to fit a wide range of standard or solid copper wire. All versions have verified dielectric strengths in excess of 2500V. A patented built-in DIN-rail adapter on the U710 blocks adds further design versatility. All fuse clips are made of high conductivity tin-plated copper with spring reinforced clips.

Highlights:

- Thermoplastic bases
- DIN-rail (U710) or Screw Mount
- Adder block design

Applications:

- All circuits up to 750 volts using semiconductor fuses for protection of small inverters, UPS systems, motor drives, etc.

Recommended Fuse Usage:

703 use with 14x51mm A70QS, A70P, URD

U705 use with 14x51mm A70QS, A70P, URD

U710 use with 22x58mm A70QS, URD, up to 100A

Ratings:

Volts : 750V

Amps : 30A (703)

: 50A (U7050)

: 100A (U7100)

SCCR : 200kA dependent on fuse I.R.

Approvals:

- UL Recognized component guide IZLT2, File E52283
- CSA Certified class 6225, File 32169

Recommended mounting screws; #10 (.190"dia)

Dimensions

PS 20x127 Ferrule Fuse Holders and No-Load Disconnectors

Highlights:

- Solid assembly offers good thermal and mechanical withstand rating
- Fuse mounting in holders or no-load disconnectors with or without open fuse indicating microswitches
- Phenolic resin models for basic applications, fiber-glass polyester for applications in corrosive atmospheres or applications for traction
- Voltage = 1,500 V and 2,500 V

Dielectric withstand tests

	R.M.S. voltage 1 mn 50/60 Hz	Impulse voltage 1.2/50 s (IEC 694 et CEI 60)
Between close phases and phase and ground	6kV(1) - 10 kV(2)	12 kV(1) - 20 kV(2)
Between phases and microswitch	12 kV	

Connecting with 16mm² max. width, 5mm max. thick terminal

(1) Basic model

Max. temperature (°C)/ Relative humidity (%): 20 °C/95% - 40°C/80% - 50°C/50%

(2) Salt spray-proof model

Moist tropical and equatorial climate or corrosive atmosphere.

Ratings:

HPBB 1000V DC Size NH Open Style Fuse Blocks

Mersen size NH fuse blocks for use with HP10NH HelioProtection® Photovoltaic series fuses

1000VDC rated and designed specifically for Mersen's HP10NH series of photovoltaic fuses. These polyester fuse blocks are available in single pole configurations with or without finger-safe covers. Fuse blocks come standard with M10 stud connectors for ease of wire termination. All fuse clips are silver-plated copper and fuse clips are spring re-enforced for superior conductivity. Select Mersen's brand of innovative HelioProtection® products to meet your stringent photovoltaic application requirements.

Features:

- 1000VDC rated
- Polyester insulating base
- Silver plated contacts
- M10 stud wire terminals
- Optional finger-safe covers
- DIN-rail or screw mounting

Applications:

- Re-combiner box (sub-combiner, array combiner, master combiner) applications
- Inverter DC input
- Battery charge controllers

Recommended Fuse Usage:

- Mersen HP10NH series HelioProtection Photovoltaic Fuses

Catalog Numbers - Fuse Block

SCCR : 50kA

Approvals:

- IEC 60269-2-1 Certification
- Pending: UL Listed to Standard 4248-18, File E347822

DFC SERIES Dead-Front Fuse Covers

Mersen DFC dead-front fuse covers snap on to individual fuses installed in fuse blocks, covering exposed live clips and terminals and reducing accidental contact by personnel. They are sized to fit Class G, H, J, K, R, CC or midget fuses for increased safety and (optional) open-fuse indication. All DFC dead-front fuse covers are reusable when a fuse is replaced – simply detach from the open fuse and re-attach to the new replacement fuse. On indicator models an orange indicator light will illuminate to indicate an open fuse. DFC fuse cover ends can be easily cut to accommodate existing wiring, safety switches or special installations. A blank label is provided with each DFC to write in circuit or fuse information.

Features/Benefits:

- Innovative design provides dead-front electrical safety to personnel
- Optional orange indicator light shows open fuse
- Many sizes to fit virtually all popular fuses/fuse blocks
- Reusable with no changes or additional cost
- Labels provided for write-in identification
- Thermoplastic flammability rating of UL 94-V2
- Low leakage current <0.6 mA at 600V

Note: DFC Covers fit single pole blocks and each pole of multi-pole blocks. Consult factory for data sheets of DFC trim instructions for safety switches.

WARNING: To avoid electrical shock, TURN POWER OFF before installing, removing or servicing.

DFC3M/DFC3LP/DRM

Fuse Block Accessories

DFC3M safety puller protects personnel, covers live parts

The DFC3M safety puller is intended to hold and safely enclose 1-1/2" x 13/32" midget or Class CC fuses for insertion or removal from fuse clips, making fuse installation easy and safe without the use of a standard fuse puller. The DFC3M is made of clear polycarbonate, so the fuse can be identified when installed in a 303 series fuse block.

DFC3LP safety puller holds fuse, protects personnel, and saves space

The DFC3LP holds and safely encloses 1-1/2" x 13/32" midget or class CC fuse, similar to the DFC3M, but with a lower profile in height so it takes less room where space is restricted. The DFC3LP is made of clear polycarbonate so the fuse can be seen after installation in a fuse block such as the Mersen 303 series.

DRM adapts 303 series midget and class CC fuse blocks to DIN-rail

The DIN-rail adapter, DRM, provides quick mounting for all Mersen 303 series midget and class CC fuse blocks to all symmetrical 35mm DIN or asymmetrical 32mm "G" rail. A DRM adapter is attached to each pole with the screw provided. The DRM is molded of black polycarbonate and is mounted or dismounted from the rail simply by depressing the finger pull.

FUSE CLIPS

For Ferrule Fuses/PC Board Mount

30A & 60A Ferrule - Fuse Clips

Fuse Clips for 30 & 60 Ampere Ferrule-type Fuses

Cat. No.	For Fuse Rating/Size			Mounting Details	
	Volts	Amps (max)	Ferrule Dia.	Hole Size	Screw Size
C08915P	600	30	13/32"	.72 dia.	#8
C08919P	600	30	13/32"	.196 dia.	#10
C08916P	250	30	9/16"	.172 dia.	#8
C08917P	250	60	13/16"	.22 X .30"	#10
	600	30	13/16"	.22 X .30"	#10
C08918P	600	60	1-1/16"	.22 X .30"	#10

All clips are UL recognized: guide IZLT2, file E52283
 All clips are tin-plated copper alloy, non-spring reinforced.

SDC5 PC BOARD clips

- PC board mount fuse clip
- For 5mm diameter fuses
- Tin plated hard brass

SDC6 PC BOARD clips

- PC board mount fuse clip
- For 1/4" diameter fuses
- Tin plated hard brass

SDC7 PC BOARD clips

- PC board mount fuse clip
- For 13/32" diameter fuses
- Tin plated hard brass

Your problem: You're facing the enormously complex wiring requirements of an automated manufacturing facility. Or the compatibility problems of a commercial complex retrofit. Or the need for seamless electrical service in a hospital annex that's anything but seamless. Where can you turn to solve your power distribution problems?

Our solution: Well beyond circuit protection solutions. Mersen offers you an arsenal of circuit management products. One of which is our line of polycarbonate 600V / 90 to 1520A Power Distribution Blocks. Safe and convenient, durable and easy to install, they're the simple way to split primary power circuits into secondary circuits — or provide fixed-junction tap-off points. Either way, our full range of sizes accommodate any gauge aluminum or copper conductor. Exclusive adder poles snap onto the 1, 2, or 3-pole blocks for maximum pole flexibility . . . and safety covers are available.

Want more information fast?

For more technical or application-specific information, please call our Power Distribution Block experts at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

Power Distribution Blocks

A POWERFUL WAY TO MANAGE YOUR POWER DISTRIBUTION CHALLENGES.

FSPDB

Finger-Safe Power Distribution Blocks

POWER DISTRIBUTION BLOCKS

SAFETY EVOLVING

Mersen FSPDBs introduce a new level of safety and ease for installing power distribution blocks. An IP20 level of finger-safe protection is achieved using FSPDBs, eliminating the need for special covers or custom Plexiglas sheets to protect your panels. FSPDBs (sizes 1 to 4) simply snap onto 35mm DIN rail to provide the quickest installation. Modular design also allows for multi pole applications by use of assembly pins. FSPDBs provide a safe, convenient way of splicing cables, splitting primary power into a variety of secondary circuits or providing a fixed junction tap-off point.

FEATURES/BENEFITS:

- **Finger-safe protection:** Fully insulated block ensures touch safe isolation of live parts. Recessed termination screws and wire openings provide IP20 grade protection and qualify as “finger-safe” per IEC 529.
- **Compact modularity:** Single or multiple pole configurations in the most compact footprint. Allows users to build smaller or higher density panels.
- **Snap on DIN-rail mounting:** Sizes 1 to 4 feature integral DIN rail adaptors allowing for quick and easy installations on 35mm DIN rail yielding lower installed costs.
- **Captive termination screws:** Unique channel design ensures captive metric wire termination screws. Screws can never be lost.
- **Available accessories:** For multi-pole panel mounting, simply snap in pins for rigid fit. Cap plugs provide the ability to maintain touch safety on unused openings. Circuit identification markers simply snap into blocks to ID circuits. End anchors provide rigid end stops. (Continued on next page.)

RATINGS:

Volts: FSPDB1,2,3—1500VAC/DC; FSPDB4,5—600VAC/DC

Amps: 175 to 840A

SCCR: 600V or less, 100kA with proper fuse; Over 600V, 10kA

Contact Technical Services for instruction sheet.

APPROVALS:

- UL Recognized Component Guide XCFR2, File E73571
- CSA Certified: Class 6228, File 69363
- IEC-947-7-1, 529, 68-2-6, CE Marked

FEATURES/BENEFITS (CONTINUED):

- **Multiple wire ratings:** Provide users more versatility by offering capability of using multiple conductors in #2 and 2/0 openings.
- **AC & DC ratings:** FSPDB1, 2, and 3 have been evaluated for use at 1000V (AC or DC) provided they are installed on DIN-rails only and with barriers between poles of opposite polarity of sufficient size to maintain required spacings.

ACCESSORIES

Catalog No.	Description
FSPIN1	Accessory pin to form multiple pole block
FSCIM1	Circuit identification marker for 2/0 & #2 max. conductors (80 per card)
FSCIM2	Circuit identification marker for 350, 400 & 600 kcmil max. conductors (56 per card)
FSCAP1	Cap plug for spare 2/0 openings
FSCAP2	Cap plug for spare 350 kcmil openings
FSCAP3	Cap plug for spare 600 kcmil opening
FSEA	Pair of end anchors

MPDB Series

Open-Style Power Distribution Blocks

POWER DISTRIBUTION BLOCKS

THE NEXT GENERATION
POWER DISTRIBUTION BLOCK (PDB)

Mersen power distribution blocks provide a safe and easy method of splicing cables, splitting primary power into secondary circuits and fulfilling requirements for fixed junction tap-off points. Unless noted otherwise, all blocks are UL and CSA approved while meeting spacing requirements for feeder and branch circuits in conjunction with UL508A and the National Electrical Code®. PDB options include single or dual conductor primary inputs and up to 30 secondary outputs. Specialty blocks are available allowing for up to 7 primary inputs. The MPDB series is offered in three size categories: miniature (MPDB62 and MPDB63 series), intermediate (MPDB66 and MPDB67 series), and large (MPDB68 and MPDB69 series), in both aluminum and copper.

FEATURES/BENEFITS:

- **Adder Poles:** All sizes have optional adder poles for increased flexibility and ease-of-use. Adder poles can be stacked to form multi-pole units in the field without the use of tools. Adder poles allow for customization of primary and secondary wire combinations. End barriers are also available for sale, catalog numbers can be found in the catalog number selection tables for each size block.
- **Wire Connectors:** Standard aluminum and copper wire connectors are available. Aluminum connectors accept both AL or CU wire while copper connectors accept CU wire only. Connectors are all 1-piece tin-plated. Many part numbers are rated to accept DLO-type fine-strand wire, allowing users to connect flexible conductors. (Continued on next page.)

RATINGS:

Volts: 1000VAC/DC

Amps: 65 to 2260A based on NEC table 310.15(B)(16) 75°C ampacities

SCCR: 100kA with properly sized fuse (See Mersen's PDB SCCR guide at ep.mersen.com or contact Mersen Technical Services)

APPROVALS:

- UL Listed to subject 1953, File E352417 unless noted otherwise
- CSA Certified Class 6228 01

FEATURES/BENEFITS (CONTINUED):

- **Insulators:** Insulators are virtually unbreakable, made of glass-filled polycarbonate. “See-through,” hinged safety covers are optional and provide a greater degree of safety and shock resistance where required. Hinged covers can be installed without tools.
- **Spacings:** 1 inch through air and 2 inches over surface between uninsulated live parts of opposite polarity meets requirements for feeder and branch circuit applications of UL508A.
- **Safety Covers:** Polycarbonate safety covers provide dead-front protection. One cover is needed for each pole. Each cover has a test probe hole in the center for circuit checking. Covers are optional accessories and catalog numbers can be found in the catalog selection tables for each size block.

ADDITIONAL SPECIFICATIONS:

- Wire Type:** Copper Blocks: 60/75°C Solid/Stranded CU; Aluminum Blocks: 60/75/90°C Solid/Stranded AL and CU
- Connector:** Copper Blocks: Highly conductive tin-plated copper; Aluminum Blocks: Highly conductive tin-plated aluminum
- Insulating Material:** Glass-filled polycarbonate with verified dielectric strength in excess of 2500V
- Flammability:** UL94-V0
- Mounting:** Direct panel mount
- Environmental:** RoHS compliant, Lead Free

PART SELECTION NOTES

MPDBs in each size category come in one, two, and three pole configurations (ending in -1, -2, and -3 accordingly). Users also have the ability to field install additional poles, end barriers, and safety covers.

Adder Pole
Snap-on Adder poles to fully assembled units to add additional poles in the field. Adder pole catalog numbers in all.

Adder Pole
Field assemble Adder poles to form multi-pole units.

Safety Cover
Optional, snap-on, hinged safety cover

Your problem: The little things that make your job easier add up. Maybe it's having the right fuse puller, so your people don't put themselves at risk by "improvising" during fuse changeouts. Or maybe you're an OEM designer or specifying engineer, and that circuit protection problem you've been wrestling with would disappear if fuses came with a special gadget that . . .

Our solution: Look no further than Mersen's line of Circuit Protection Accessories. Cabinets, box covers, reducers, pullers, blown-fuse indicators, add-on switches . . . they're all here. In stock. Under one roof. And ready to meet your circuit protection system maintenance needs — or help you solve specialized design problems.

Want more information fast? For more technical or application-specific information, please call our Circuit Protection Accessories experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

Box Covers

CIRCUIT PROTECTION ACCESSORIES

Mersen box covers fit all standard size boxes with a variety of plug fuse, switch and receptacle combinations. They provide easy access to local protection and control of 125V motors and other equipment. Long-life corrosion-protected steel bases.

Fuse Reducers

CIRCUIT PROTECTION ACCESSORIES

Mersen fuse reducers allow the use of lower rated fuses in existing equipment having clips with higher ampere ratings. The use of closer rated time-delay fuses can improve circuit protection. For example, renewable or one-time fuses feeding a motor can be replaced with fuses sized closer to the motor nameplate current. Non-rejection reducers will allow Class H, K or R fuses to fit Class H or K clips. Rejection-type reducers will allow only Class R fuses to fit Class R clips or only Class J fuses to fit Class J clips. Class J fuse reducers are not for bolt on applications.

CATALOG NUMBERS

Class H & K (Non-rejection)	Class R (Rejection)	Class J (Rejection)	Description
250V			
632	R632	-	Allows 30A fuse to fit 60A clips

*Not a pair; rejection end piece only.

SAFETY NOTE:

Fuse Reducers are intended for temporary use only.

RATINGS:

- **Volts:** for 250 and 600V Class H, K and R fuses; for 600 Volt Class J fuses
- **Amps:** 30 to 600A
- Tested to 200,000A

APPROVALS:

- UL Listed Guide No. IZZR
- CSA Certified

Fuse Pullers/Clip Clamps

CIRCUIT PROTECTION ACCESSORIES

PLASTIC FUSE PULLERS

Mersen plastic fuse pullers are fully insulated, made of high-dielectric, reinforced plastic with notched handles to provide a safe grip. Stronger and more durable than fiber pullers, they are permanently marked with the recommended fuse ampere range. Yellow color for safety.

Catalog No.	Description		Use with Fuses		
	Size	Length (in)	Ampere	Volts	Diameter (in)
34-001G	small	5	0-30	32-250	9/32-1/2
34-002G	pocket	7-1/2	0-100	250 600	-
34-003G	large	11-3/4	31-600 31-400	250 600	-

PLASTIC FUSE CLAMPS

Mersen fuse clip clamps are used to clamp fuse clips together onto a fuse ferrule or blade. An easy twist of the cap tightens the jaws against the clip, preventing heating by reducing resistance at the point where fuse and clip make contact. This helps prevent loss of spring tension due to annealing from overheating.

Catalog No.	Use with Fuse Clips			Weight (ounces)
	Type	Ampere	Volts	
32-001G	Ferrule	30	250	2
32-002G	Ferrule	60	250	
32-002G	Ferrule	30	600	
32-003G	Ferrule	60	600	
32-004G	knife blade	100	250	2
32-005G		200	or	2
32-006G*		400	600	8
32-007G		600		8

* Wide jaws permit clamping split clips.

NYLON FUSE PULLERS

Mersen nylon fuse pullers are fully insulated, made of high-dielectric, high impact nylon with no-slip handles and protective finger stops for greater safety when inserting fuses. Yellow color for safety.

Catalog No.	Description		Use with Fuses	
	Size	Length (in)	Ampere	Volts
34-015G	small	5	0-30	250
34-016G	medium	7-1/4	0-100 0-60	250 600

Blown Fuse Indicators

CIRCUIT PROTECTION ACCESSORIES

TRIGGER® INDICATOR

The Trigger Indicator (catalog number suffix TI) is available on many blade type fuses, primarily Form 101 semiconductor fuses and some Class L fuses. The TI allows blown fuses to be identified visually, eliminating the need for resistance or continuity testing.

SHAWMUT TRIGGER®

The Shawmut Trigger Indicator is a field-mountable blown-fuse indicator which is wired in parallel with the fuse to be monitored. The striker pin exerts a static force of one pound and may be used to actuate a switch. It is available in 130 volt (TI-130), 600 volt (TI-600), and 1500 volt (TI-1500) ratings. The TI-600 Trigger is a UL Listed accessory. The Shawmut Trigger is not a fuse and should only be used in parallel with fuses rated 70A or higher. To mount the Trigger, use two midget fuse clips (for 13/32" diameter fuses) found in the Fuse Clip section.

CATALOG NUMBERS

Cat No.	Volts	Length A-In.
TI-130	0-130	2
TI-600	0-600	2
TI-1500	0-1500	3-1/2

TRIGGER® ACTUATOR

The Trigger Actuator (catalog number suffix TA) has two functions and is an option available on many Amp-Trap® fuses. First, it provides visual indication of an open fuse and second, it provides a mount for an Add-On-Switch (AOS-) which can indicate a blown fuse via a signal light or initiate appropriate control action. The Trigger Actuator has no measurable I²t or arc voltage effect on fuses rated 65A or higher. It will add 2 to 5 amperes of long term rating and requires a minimum circuit voltage of 5 to 10 volts to activate.

ADD-ON SWITCH

Add-On-Switches contain one single-pole double-throw contact rated 4 amperes resistive and 1 ampere inductive at 250V AC maximum. Two versions of the Add-On-Switch are available. Catalog number AOS-S has screw terminals. Catalog number AOS-Q accommodates push-on connectors.

IL INDICATOR

The “IL” indicator, developed from proven designs, provides a blown fuse indication system which does not sacrifice the excellent I²t characteristics of Mersen fuses. Its low voltage design requires just 0.9 volts to activate the indicator, thus insuring reliable fuse performance under all conditions. The red pop up button is located in the center of the fuse body for ease of visibility and optimum voltage isolation. Interference with busbar and cable connection is significantly less than other designs. The addition of the “IL” indicator provides blown fuse indication on virtually all Mersen fuses. Optional auxiliary microswitches for remote signaling are also available for use with the “IL” indicator.

FEATURES/BENEFITS:

- Visual indication or remote signaling
- Optional auxiliary microswitches
- Same size for all fuses
- Retains optimum performance
- Operation at all times above 0.9 volts

HIGHLIGHTS:

- Low voltage design
- Center location
- Rugged construction
- Proven reliability
- AC or DC

For blown fuse indication on general purpose fuses, please consult factory.

Protistor® Fuse Microswitches

CIRCUIT PROTECTION ACCESSORIES

MICROSWITCH SYSTEMS FOR ROUND AND SQUARE-BODY FUSES (NOT FOR PSC FUSES)

The Protistor fuse microswitch is a remote signaling system designed to fit on round and square body Protistor fuses (not for PSC fuses) that are equipped with microswitch support. It indicates fuse status and has a manual reset feature.

FEATURES/BENEFITS:

- Remote signaling systems for fitting on Mersen fuses equipped with microswitch support
- Indication of fuse status
- Manual reset
- Standard and low current models with different insulation ratings
- Watertight types for use in corrosive atmospheres

ELECTRICAL DIAGRAM OF EACH MICROSWITCH CIRCUIT

Non-blown fuse
Microswitch ON

Blown fuse
Microswitch OFF

All of these signaling systems are resettable and fitted with silver-plated 3-terminal microswitch C, NO and NC. The C terminal is on the top and connection is made via 6.35 mm clips except for watertight models whose clips are 4.8 mm wide

NOTE (2): The 26.4 dimension is the same with 1 or 2 separated circuits NO-NC.
Tests with sine vibrations carried out at ambient with scanning of the three main holder axes.

Spectrum: 1st segment (2 to 16 Hz) constant trip $x = 5$ mm peak.
2nd segment (16 to 250 Hz) constant acceleration $y + 5$ g peak

Exponential scanning speed: 1 octave per minute.
Duration: 2 hours per axis.

Point of Sale Displays

CIRCUIT PROTECTION ACCESSORIES

MD-POP: MERSEN DISPLAY- POINT OF PURCHASE

Approximately 5 feet tall and 24 inches wide, this freestanding orange metal display features 9 rows of bins to accommodate a wide variety of Mersen fuses. Custom header (below) promotes Mersen Electrical Protection Products.

MRDS: MERSEN ROTATING DISPLAY STAND

This freestanding display fits easily on a counter and holds 8 boxes of Mersen's STXH Surge Protective Devices.

MFD-GLASS: MINIATURE FUSE DISPLAY

Mersen's miniature fuse display, MFD-GLASS, is a compact and organized solution to hold only the most popular glass fuses available. The display can hold up to 300 fuses (not included) and contains individual slots for supporting standard glass fuse packages. It is made from Mersen orange plastic and is wall mountable. Included with the MFD-GLASS is a paper insert with company logo. Customize this display with the specific glass fuses that meet your customers' needs. The dimensions are 8.5 (w) x 10 (h) x 1.56 (d) inches.

GSFC/GSFC-M: SPARE FUSE CABINETS

Mersen Spare Fuse Cabinets provide dedicated storage space for spare fuses. They are made of heavy duty all-welded steel construction with primed and painted gray finish offering a good appearance and easy maintenance. A positive latching handle with cylinder lock and two keys will prevent unauthorized access. Two sizes: the GSFC is 24 (w) x 36 (h) x 12 (d) inches (6 cubic feet) or the GSFC-M is 18 (w) x 24 (h) x 13 (d) inches (3.25 cubic feet).

Disconnect Switches

The safest way to switch power on and off in your industrial control panels.

Your problem:

You need a range of disconnect switches for your industrial control requirements ranging from “Service Entrance Rated” to motor isolation. You need DIN-rail and direct mountable disconnect switches that conform to today’s “finger-safe” IEC standards. You need a range of handles, shafts and accessories to select from.

Our solution: Mersen offers an extensive line of compact UL 98 fusible and non-fusible disconnect switches ranging from 30 to 1200A. We also offer a full range of compact UL 508 disconnect switches ranging from 16 to 80A. In addition, you can find handle, shaft and accessory options that you require for all of your applications.

Want more information fast? For more technical or application-specific information, please call our Disconnect Switch experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

UL 508 Non-Fusible Disconnect Switches

UL 508 Non-Fused (M163 – M803)

The M-series Load Break Switch is the most compact industrial-grade switch on the market. Capable of making or breaking loads up to 600V (UL), it is suitable as a motor disconnect. Extremely compact and robust, these switches have a variety of mounting options including DIN-rail, base, or door-mounting. A wide assortment of handles, shafts and accessories are available to accommodate any installation requirement.

Highlights:

- Compact
- Robust
- DIN-rail, base, or door-mounting
- Choice of handles and shafts
- Padlockable
- Side-mount auxiliary contacts and additional poles
- Double-break, silver-plated contacts

Applications:

- Line of sight disconnect
- Electrical isolation
- Branch-circuit switch
- Motor disconnect

Ratings UL:

Volts : 600VAC
Amps : 20, 30, 40, 63, and 80A
 Suitable as motor disconnect up to 40hp

Ratings IEC:

Volts : 690VAC
Amps : 16, 25, 40, 63, and 80A

UL 98 Non-Fusible Disconnect Switches

UL 98 Non-Fused Switches

Mersen's non-fusible disconnect switches are listed to UL 98 and bear the CE mark as conformance to IEC 60947-3. They are "service entrance" devices that are capable of fully rated load-break and load-make. All switches over 100A have windows to provide visual indication of the contact status. Engineered to have the smallest footprint, these switches also employ a modular design that enables the handle to be placed amongst the poles or at the ends.

A wide range of ergonomic handles are available, as are all manner of accessories, to accommodate multiple applications.

Features/Benefits

- Service entrance rated
- Front or side operation
- Most compact size
- Internally mounted auxiliary contacts
- Flange mounting accessories

Applications:

- Service entrance or main panel disconnects
- "Make and break" power circuit applications on load
- Electrical isolation
- Safety switch

Catalog Number Designation

		M	200	U	3	0	—	—
Switch	M = Mersen AC Switch							
Ampacity	16 to 1200							
Type	U = non-fused UL98							
Number of Poles/Left side of Handle	AC: 0, 1, 2, 3, 3N, 4, etc. (N = neutral)							
Number of Poles/Right side of Handle	AC: Blank = < 200A non-fused, 0, 1, 2, 3, 3N, 4, etc. (N = neutral)							
Revision	Blank = 0							
Special Configurations	S = side-operated							

Ratings UL:

- Volts** : 600VAC
- Amps** : 30A, 60A, 100A, 200A, 400A, 600A, 800A, 1200A
- SCCR** : Up to 200kA with fuses
Suitable as motor disconnect

Ratings IEC:

- Volts** : 690VAC
- Amps** : 125A, 160A, 200A, 250A, 315A, 400A, 600A, 800A, 1250A

Approvals:

- All UL switches meet the requirements of UL and CSA
- UL listed guide WHTY, File E191605 for UL 98 (ratings from 30 A to 1200 A)
- IEC 60947-3

UL 98 Fusible Disconnect Switches

UL 98 Fusible Disconnect Switches

Mersen's fusible disconnect switches are listed to UL 98 and bear the CE mark as conformance to IEC 60947-3. They are "service entrance" devices capable of fully rated load-break and load-make. While long-term safety, reliability, and functionality are always paramount in the design of our products, these switches are also engineered to have the smallest footprint. The modular design allows placement of the handle anywhere amongst the poles. The fuse doors cannot open when the switch is in the "ON" position, and all switches are double-break, which isolates both fuse clips from voltage during fuse replacement. The switches' "Test" position allows actuation of the auxiliary contacts without main power. Power taps enable energizing a CPT or surge device without the need for a separate terminal block.

A wide range of ergonomic handles are available, as are all manner of accessories.

Highlights:

- Multiple Configurations
- Power taps
- Adjustable shaft depth
- Fuse monitoring
- Interlocked fuse doors

Applications:

- Main disconnects
- Short circuit protection
- Electrical isolation
- Overcurrent protection
- Safety switch

Configurations

At the end of the switch fuse
Mxxx03, 04, 30, or 40, S, N

Between the poles
Mxxx12, 22, 22N, S

Side operated types Mxxx03, 04, 30, or 40, S, N

Catalog Number Designation

		M	60	J	3	0	S
Switch	M = Mersen AC Switch						
Ampacity	16 to 1200)						
Type	CC = CC fused J = J fused L = L Fused						
Number of Poles/Left side of Handle	AC: 0, 1, 2, 3, 3N, 4, etc. (N = neutral)						
Number of Poles/Right side of Handle	AC: Blank = < 200A non-fused, 0, 1, 2, 3, 3N, 4, etc. (N = neutral)						
Revision	Blank = 0						
Special Configurations	S = side-operated N = Non-fused switched Neutral F = Rod-Flange Actuated						

Ratings UL:

Volts : 600VAC
Amps : 30, 60, 100, 200, 400, 600, 800, and 1200A
SCCR : Up to 200kA with Class CC, J, or L Fuses

Ratings IEC:

Volts : 690VAC
Amps : 25, 50, 63, 125, 160, 200, 250, 400, 630, 800, and 1250A

Approvals:

- All UL Fusible Disconnect Switch switches meet UL & CSA requirements
- UL listed guide WHTY, File E191605 for UL 98 (ratings from 30A to 1200A)
- IEC 60947-3

IEC Non-Fusible Disconnect Switches

IEC UL Modular Non-Fused (M163 - M4000E03)

The M-series Load Break Switch is the most compact industrial-grade switch on the market. Capable of making or breaking loads up to 690V (IEC), 600V (UL), it is suitable as a motor disconnect. Extremely compact and robust, these switches are modular but also exist in a door-mounting version. A wide assortment of handles, shafts and accessories are available to accommodate any installation requirement.

Highlights:

- Compact
- Robust
- DIN-rail, base, or door- mounting
- Choice of handles and shafts
- Padlockable
- Side-mount auxiliary contacts and additional poles
- Double-break, silver-plated contacts

Applications:

- Line of sight disconnect
- Electrical isolation
- Branch-circuit switch
- Motor disconnect

Ratings IEC:

Volts : 690VAC
Amps : 16, 25, 40, 63, 80, 100, and 125A

Ratings UL:

Volts : 600VAC
Amps : 20, 30, 40, 63, 80, 100, and 125A

Suitable as motor disconnect up to 40hp

IEC Fusible Disconnect Switches

IEC Fusible Disconnect Switches

Mersen's fusible disconnect switches are listed to UL 98 and bear the CE mark as conformance to IEC 60947-3. They are "service entrance" devices capable of fully rated load-break and load-make. While long-term safety, reliability, and functionality are always paramount in the design of our products, these switches are also engineered to have the smallest footprint. The modular design allows placement of the handle anywhere amongst the poles. The fuse doors cannot open when the switch is in the "ON" position, and all switches are double-break, which isolates both fuse clips from voltage during fuse replacement. The switches' "Test" position allows actuation of the auxiliary contacts without main power. Power taps enable energizing a CPT or surge device without the need for a separate terminal block.

A wide range of ergonomic handles are available, as are all manner of accessories.

Highlights:

- Multiple Configurations
- Power taps
- Adjustable shaft depth
- Fuse monitoring
- Interlocked fuse doors

Applications:

- Main disconnects
- Short circuit protection
- Electrical isolation
- Overcurrent protection
- Safety switch

Configurations

At the end of the switch fuse
Mxxx03, 04, 30, or 40, S, N

Between the poles
Mxxx12, 22, 22N, S

Side operated types Mxxx03, 04, 30, or 40, S, N

Catalog Number Designation

		M	30	J	3	0	—	S
Switch	M = Mersen AC Switch MD = Mersen DC Switch							
Ampacity	16 to 1200)							
Type	Blank = non-fused UL508 U = non-fused UL98 J = J fused F = NFC fused	E = IEC non-fused CC = CC fused D = DIN fused B = BS-88 fused L = L Fused

		80 kA, 415 V	kA	35	40.5	59
Rated conditional short-circuit current I _p (r.m.s.) and corresponding max. allowed cut-off current I _c	at prospective SC-current		A	250/200	355/315	500/500
	Max. fuse rating gG / aM		A	250/200	250/250	500/500
	at prospective SC-current	100 kA, 500 V	kA	37.5	37.5	63.5
	Max. fuse rating gG / aM		A	250/200	250/250	500/500
The cut-off current I _c refers to values listed by fuse manufacturers (single phase test acc. to IEC60269)	at prospective SC-current	80 kA, 690 V	kA	25	32.5	46
	Max. fuse rating gG / aM		A	160/	200/250	315/400
	at prospective SC-current	50 kA, 415 V		28	28	44
	Max. BS fuse size gG / aM		A	200/200M315	250/200M315	400/400M500
	at prospective SC-current	80 kA, 690 V	kA	8	28	48
	Max. BS fuse size gG / aM		A	200/200M250	250/200M250	400/400M450
Rated short-time withstand current, 1 s	r.m.s. -value		kA	8	8	14
	Max. distance from switch frame to nearest busbar/cable support		mm	150	150	150
Rated capacitor power when no initial charge on the capacitor	The capacitor rating of the switch-fuse is limited by the fuse link.	400 V	kVAr	90	105	180
		415 V	kVAr	100	115	200
		500 V	kVAr	120	135	215
		690 V	kVAr	160	190	325
Power loss / pole	With rated current, without fuse		W	8	13	30
Mechanical endurance	Divide by two for operation cycles		Oper.	20 000	20 000	16 000
Fuse types, IEC 60269-2-1	Sec. I, DIN 43620			0	0-1	0-2
	Sec. IA, NFC 0-3 Ref.A, 4a Ref.B			1		3
	Sec. II, BS 88			B1-B2	B1-B3 ²⁾	B1-B4 ³⁾
Weight without accessories	3-pole switch fuses		mm	M6/111	M8/111	M8/111
Terminal bolt size (included)	Metric thread diameter x length		kg	2.6	3.1	5.7
Terminal tightening torque	Counter torque required		mm	M8x25	M10x30	M10x30
Fuse-links bolts tightening torque			Nm	15-22	30-44	30-44
Operating torque	Typical for 3-pole switch fuses		Nm	4	5	20
			Nm	7	7	19

1) These values are given for guidance and may vary acc. to the motor manufacturer

2) Max fuse body dia 52 mm

3) Max fuse body dia 62 mm

4) Category B

5) Acc. to IEC 60957-2, IEC 60947-1, § 6.1.1. Minimum ambient temperature -5°C. Category B: -5°C...-35°C

IEC Fusible Disconnect Switches

Technical Data

Technical data according to IEC 60947-3						
General purpose amp rating			A	630	800	1250
Rated insulation voltage and rated operational voltage AC-20 and DC-20	Pollution degree 3		V	1 000	1 000	1 000
Dielectric strength		50 Hz 1min.	kV	10	10	10
Rated impulse withstand voltage			kV	12	12	12
Rated thermal current						
in ambient 35 °C and temporarily 40 °C ⁵⁾	In open air		A/W	630/60	800/65	1250/110
max. fuse power dissipation ¹⁾	In enclosure		A/W	570/50	720/55	1000/85
...with minimum cable cross section		Cu	mm ²	2 x 185	2 x 240	2 x 400
Rated thermal current of detachable neutral	In open air / Cu cable or bar cross section	In "N3" types	A/mm ²	900/2 X 240	900/2 X 240	1250/2 x 400
Derating, mounting on wall horizontal fuses	In open air or ventilated enclosure		%	0	4	4
	Totally enclosed		%	5	8	8
Derating, mounting on ceiling			%	10	10	10
Derating at 60 °C	In open air / in enclosure		%	20/20	20/20	20/20
Rated operational current, AC-21A		≤ 500 V	A	630	800	1250 ⁴⁾
		690 V	A	630	800	1250 ⁴⁾
Rated operational current, AC-22A		≤ 415 V	A	630	800	1250
		500 V	A	630	800	1250 ⁴⁾

PV-Rated Disconnect Switches

UL 98 and IEC-Rated DC Switches

Mersen offers a range of DC disconnect switches especially designed for PV applications, in one- and two-circuit configurations for both 1000V and 1500V DC applications. The technology inside the switch and the visible contacts allow a quick, safe, and reliable DC breaking at all current levels up to 1500VDC. The product is ready and simple to install independent of the polarity, with limited power losses, and a smaller footprint than competition.

Highlights:

- IEC version and UL version
- Visible contacts
- Compact footprint
- Direct installation for floating polarity configuration
- Jumper bar available for grounded configuration

Applications:

- Medium and large power photovoltaic installations up to 1500VDC
- “Make and break” on load and provide safety isolation at string combiner box level

Ratings:

- Volts** : 1000 and 1500VDC
Amps : IEC: 100 to 500A
 UL98: 100 to 400A
SCCR : 5 to 10kA for higher ratings

Catalog Number Designation

		MD	100	E	1	1	—
Switch	MD = Mersen DC Switch						
Ampacity	100A to 500A						
Type	E= IEC, U= UL-listed, V=1500V						
Number of Poles/Left side of Handle	1, 2, 3						
Number of Poles/Right side of Handle	1, 2, 3						
Revision	Blank = 0						

Approvals:

- UL98B File #E466972 WHVA
- IEC 60947-3 CE

Enclosed Disconnect Switches

Mersen enclosed disconnect switches are designed to meet customer's requirements for compact and durable individual disconnecting means. Both fusible and non-fusible versions are available in a variety of enclosure types resulting in one of the largest available ranges in the industry. The enclosed disconnect switch range offers safety, ease of installation, space savings and operational convenience to end-users.

Mersen features NEMA style, Type 4X non-metallic and stainless steel enclosures that are extremely durable and provide the ultimate protection for harsh environments and conditions. These rugged enclosure types are often used in areas where "wash down" applications are required.

Highlights:

- Suitable for use as motor disconnect
- Meets OSHA lockout/tagout requirements
- NEMA rated enclosures
- Knockouts provided
- Easy screw mounting
- Selector or pistol handles in black or red/yellow
- Clear ON/OFF indication

Applications:

- Load break switching
- Separate disconnect means within sight of all motor loads to comply with NEC® Article 430
- Circuit isolation
- Service entrance ratings available
- Food processing
- Conveyor systems
- Harsh industrial environments

Ratings:

Fusible

Volts : 600VAC
Amps : 30 to 800A

Non-Fusible

Volts : 600VAC
Amps : 16 to 1200A

Volts : 600VDC
Amps : 100 to 400A

Approvals:

- UL 508A
- UL 508
- UL 98
- CSA
- IEC versions available

Enclosed Disconnect Switches

Part Numbering Guideline (example)

ED	FS	30	3	R	S	0	-
Enclosure Type	Switch Type	Amp Rating	Number of Poles	Color of handle: R = Red/yellow B = Black	Type of handle: S = Selector P = Pistol	Auxiliary contacts: See chart below	Other options

Switch Type		Part Numbers	Auxiliary Contact Suffix				
			0	1	2	3	4
FS	UL 508 Non-Fused	M163 to M803	None	1 NO	1 NC	1 NO + NC	1 NO + NO
FC or SC	UL 98 Non-Fused	M30U to M1200U	None	1 NO	1 NC	1 NO + NC	1 NO + NO
FB	UL 98 Fused	MxxC, J, L	None	1 NO	1 NC	1 NO + NC	1 NO + NO

Other Options

Please consult factory for availability and suffix for any other options including:

- Neutral blocks (N)
- If terminal shrouds are necessary, add a "T" to the end of the part number.
- Special Request
 - Pilot Lights
 - Pushbuttons
 - 2 or 3 position selector switches

All enclosed switches are provided with a standard integral ground lug

Box type	Switch type	Ground lug wire size
NEMA/UL	16 – 60A	(2) #4 – #14
NEMA/UL	80 – 125A	(2) 1/0 – #14
NEMA/UL	200 – 400A	(2) 600kcmil – #2
NEMA/UL	600A & above	Consult Factory

Note: EDFs 40A, 60A & 80A use grounding stud

Enclosure Application Information

Enclosure Type	Intended Use and Description
NEMA 1	Indoor use primarily to provide a degree of protection against contact with the enclosed equipment and against a limited amount of falling dirt.
NEMA 3R	Intended for outdoor use primarily to provide a degree of protection against rain, sleet, and damage from external ice formation.
NEMA 12	Intended for indoor use primarily to provide a degree of protection against circulating dust, falling dirt, and dripping non-corrosive liquids.
NEMA 4	Intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, hose-directed water, and damage from external ice formation.
NEMA 4X	Intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, wind blown dust and rain, splashing water, hose-directed water, and damage from ice formation.
IEC IP65	Total protection against dust and protected against water jets from any hosed direction.

High Power Switches

Expertly engineered for reliable performance

Your problem:

High power switches are critical to your operation. Not only do they help protect your people from injury, they help protect your equipment and processes and minimize the risk of costly downtime and repairs. You need high power switches that are reliable, enduring and that thrive in harsh environments.

Our solution: Mersen offers a wide range of DC and AC high power switches that are rigorously engineered and designed to handle high current/low voltage and high voltage/low current applications. And when you need more than just a switch, Mersen's world-class engineering team is ready to provide custom engineering and fabrication to build the high power switch system or assembly you need, exactly the way you need it.

Want more information fast? For more technical or application-specific information, please call our High Power Switch experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

HA Range 1500V DC LV Disconnect Switch

Berg 1500V DC Disconnect Switch

Our HA switch style is a high quality, extremely robust product. This safety device is simple, transparent to the network, and reliable over time in all environments. It is a safety device with a visible blade opening and is used for maintenance of major electrical installations. The switch may also be customized to customer requirements regarding number of poles and poles spacing.

Features/Benefits:

- Large air isolation and creepage distance
- Self-cleaning blade contacts
- Positive opening and visible break
- Rugged anti-torsion construction
- Large customization with: manual, motor & pneumatic drives; auxiliary switches; solenoid interlocks
- Adaptable mounting dimensions

Highlights:

- No-load operation
- Indoor type – vertical mounting only
- Mechanical endurance: $\leq 1\text{kA} = 25,000$ cycles; $>1\text{kA} = 50,000$ cycles (open/close)
- 130°C maximum temperature without damage to the switch
- Electrical contact through silver plated electrolytic copper blades with pressed on hard silver contact rivets and silver plated copper alloy castings
- Supporting insulators made of cast epoxy resin (UL94-V1 flammability classification)

Applications:

- Battery disconnect
- Grounding switch
- Motor isolation
- 3rd rail sectionalization for Transit use

Ratings:

Amps : 100A to 3750A

Approvals:

- Designed according to IEC 62271

Please contact our application team at technicalservices.nby@mersen.com or 978-465-4853 for suitable solutions to your requirements.

HUVS Range 3.6kV MV Changeover Disconnect

BERG 3.6 kV AC / DC MV Changeover Switch

The changeover disconnect's unique design transfers power from one single source to two or three loads in one switch body using one shaft, eliminating the need for costly and non-safe interlocks systems. It is a safety device with a visible blade opening and is used for maintenance of major electrical installations. The electrical contact is made with silver contacts, which provide strong mechanical endurance up to 50,000-cycles.

Features/Benefits:

- Positions 1-2 (1-0-2 on request)
- Large isolation air and creepage distance
- Self-cleaning blade contacts
- Positive opening and visible break
- Rugged anti-torsion construction
- Large customization with: manual, motor & pneumatic drives; auxiliary switches; solenoid interlocks

Highlights:

- No-load operation
- Indoor type – vertical mounting only
- Mechanical endurance: $\leq 1\text{kA} = 25,000$ cycles; $>1\text{kA} = 50,000$ cycles (open/close)
- 130°C maximum temperature without damage to the switch
- Electrical contact through silver plated electrolytic copper blades with pressed on hard silver contact rivets and silver plated copper alloy castings
- Supporting insulators made of cast epoxy resin (UL94-V1 flammability classification)

Applications:

- Battery disconnect
- Grounding switch
- Transfers power between furnaces

Rated power frequency withstand voltage, 1 min, 50 Hz

Phase to earth and between poles (kV)	10
Across the isolating distance (kV)	12

Rated lightning impulse withstand voltage (BIL)

Ratings:

Amps : 400A to 6300A

Approvals:

- Designed according to IEC 62271

HAS Range 12kV MV Disconnect Switch

The BERG 12 kV AC Disconnect Switch is a robust product

This safety device is simple and transparent to the network, and reliable over time in all environments. Our specially designed pressure systems require low to no maintenance. It is a safety device with a visible blade opening and is used for maintenance of major electrical installations. The electrical contact is made with silver contacts, which provide strong mechanical endurance up to 50,000-cycles.

Features/Benefits:

- Large air isolation and creepage distance
- Self-cleaning blade contacts
- Positive opening and visible break
- Rugged anti-torsion construction
- Large customization with: manual, motor & pneumatic drives; auxiliary switches; solenoid interlocks
- Adaptable mounting dimensions

Highlights:

- No-load operation
- Indoor type – vertical mounting only
- Mechanical endurance: $\leq 1\text{kA} = 25,000$ cycles; $>1\text{kA} = 50,000$ cycles (open/close)
- 130°C maximum temperature without damage to the switch
- Electrical contact through silver plated electrolytic copper blades with pressed on hard silver contact rivets and silver plated copper alloy castings
- Supporting insulators made of cast epoxy resin (UL94-V1 flammability classification)

Applications:

- Generator isolation
- Transformer isolation
- Grounding switch
- Tie switch
- Medium Voltage drive
- Furnace applications

Rated power frequency withstand voltage, 1 min, 50 Hz

Phase to earth and between poles (kV)	28
Across the isolating distance (kV)	32

Rated lightning impulse withstand voltage (BIL)

Phase to earth and between poles (kV)	75
Across the isolating distance (kV)	85

Electrical Characteristics:

Ampere Rating (A) - AC	400	630	1000	1600	2000	3150	4000	6300	8000	12000

Rated peak withstand current, 50 Hz (kA)	50	50	100	130	160	177	177	214	275	300

Approvals:

- Designed according to IEC 62271

HAS Range 24kV MV Disconnect Switch

BERG 24 kV AC MV Disconnect Switch

This is a high quality, extremely robust AC disconnect switch. This safety device is simple, transparent to the network, and reliable over time in all environments. Our specially designed pressure systems require low to no maintenance. It is a safety device with a visible blade opening and is used for maintenance of major electrical installations. The electrical contact is made with silver contacts, which provide strong mechanical endurance up to 50,000-cycles.

Features/Benefits:

- Large air isolation and creepage distance
- Self-cleaning blade contacts
- Positive opening and visible break
- Rugged anti-torsion construction
- Large customization with: manual, motor & pneumatic drives; auxiliary switches; solenoid interlocks
- Adaptable mounting dimensions

Highlights:

- No-load operation
- Indoor type – vertical mounting only
- Mechanical endurance: $\leq 1\text{kA} = 25,000$ cycles; $>1\text{kA} = 50,000$ cycles (open/close)
- 130°C maximum temperature without damage to the switch
- Electrical contact through silver plated electrolytic copper blades with pressed on hard silver contact rivets and silver plated copper alloy castings
- Supporting insulators made of cast epoxy resin (UL94-V1 flammability classification)

Applications:

- Generator isolation
- Transformer isolation
- Grounding switch
- Tie switch
- Medium Voltage drives
- Furnace applications

Rated power frequency withstand voltage, 1 min, 50 Hz

Phase to earth and between poles (kV)	50
Across the isolating distance (kV)	60

Rated lightning impulse withstand voltage (BIL)

Phase to earth and between poles (kV)	125
Across the isolating distance (kV)	145

Electrical Characteristics:

Rated continuous current (A) - AC	400	630	1000	1600	2000	3150	4000	6300	8000	12000
Rated short-time withstand current (rms) 1 sec (kA)	26	26	30	37	58	64	64	77	100	110
Rated peak withstand current, 50 Hz (kA)	65	65	75	91	144	159	159	193	250	275

Approvals:

- Designed according to IEC 62271

HAS Range 36kV MV Disconnect Switch

BERG 36 kV AC Disconnect Switch

The HAS Range Low Voltage Disconnect Switch is a high quality, extremely robust product. This safety device is simple, transparent to the network, and reliable over time in all environments. Our specially designed pressure systems require low to no maintenance. It is a safety device with a visible blade opening and is used for maintenance of major electrical installations. The electrical contact is made with silver contacts, which provide strong mechanical endurance up to 50,000-cycles.

Features/Benefits:

- Large air isolation and creepage distance
- Self-cleaning blade contacts
- Positive opening and visible break
- Rugged anti-torsion construction
- Large customization with: manual, motor & pneumatic drives; auxiliary switches; solenoid interlocks
- Adaptable mounting dimensions

Highlights:

- No-load operation
- Indoor type – vertical mounting only
- Mechanical endurance: $\leq 1\text{kA} = 25,000$ cycles; $>1\text{kA} = 50,000$ cycles (open/close)
- 130°C maximum temperature without damage to the switch
- Electrical contact through silver plated electrolytic copper blades with pressed on hard silver contact rivets and silver plated copper alloy castings
- Supporting insulators made of cast epoxy resin (UL94-V1 flammability classification)

Applications:

- Generator isolation
- Transformer isolation
- Grounding switch
- Tie switch
- Medium Voltage drives
- Furnace applications

Rated power frequency withstand voltage, 1 min, 50 Hz

Phase to earth and between poles (kV)	70
Across the isolating distance (kV)	80

Rated lightning impulse withstand voltage (BIL)

Phase to earth and between poles (kV)	170
Across the isolating distance (kV)	195

Electrical Characteristics:

Rated continuous current (A) - AC	400	630	1000	1600	2000	3150	4000	6300	8000	12000
Rated short-time withstand current (rms) 1 sec (kA)	26	26	30	37	58	64	64	77	100	110
Rated peak withstand current, 50 Hz (kA)	65	65	75	91	144	159	159	193	250	275

Approvals:

- Designed according to IEC 62271

NORD DC Disconnect Switch 1500VDC

Fouilleret NORD DC Disconnect Switch

The NORD is a high quality, extremely robust product. This safety device is simple, transparent to the network, and reliable over time in all environments. The NORD is a deformable switch, which moves with the expansion and retraction of the busbar system, eliminating the need for flexible shunt connections. Its individual spring system helps to distribute the current throughout the switch, and provides a very low and constant voltage drop. The NORD DC Disconnect Switch is mainly used with copper busbar systems. The NORD switch is bolted directly to the busbar with bolted copper connections for easy installation. The electrical contact is made with silver contacts, which provide strong mechanical endurance up to 50,000-cycles.

Features/Benefits:

- Visible break by direct seeing of the mobile silver-plated copper contacts
- Mechanically independent mobile contact arms with high-pressure springs
- Electrical contact with silver to silver contact
- Insulation with Fiberglass reinforced polyester insulators
- Operation mechanism of bichromate galvanized steel by a toggle closed system
- Disconnects are self-supporting. Busbar support must be sized to withstand the disconnect's additional weight
- Upon request, choice of input and output terminals in aluminium or silver-plated copper
- Upon request, two-poles or change-over design by side association of two disconnects

Highlights:

- Accepts busbar dilatations thanks to built-in deformability (flexible shunts are not necessary)
- Low and constant voltage drop
- Self-cleaning effect on contact
- High short-circuit current withstand
- Large insulation and creepage distances
- Easy connections to:
 - Aluminum busbar by welding
 - Copper busbar by bolting
- Large customization possible with:
 - Actuators (motor, pneumatic, manual)
 - Auxiliaries (limit switches, locks, control boxes)
 - Adaptation to the connecting busbar.

Applications:

- Output rectifier isolation
- Large power supply disconnect

Ratings:

Amps : 14kA to 140kA

Approvals:

- Designed according to IEC 60947-3 / IEC 60077-1 (NFF 16101 / 16102)

Fouilleret NORD DC Disconnect Switch 1500VDC

Main Technical Characteristics

Electrical Data:

- Temperature rise at nominal current (with 40°C max. Ambient temperature) less than : 65°C
- Typical temperature rise at nominal current (with 40°C max.) : 15°C above busbar
- Typical voltage drop at nominal current : 30 mV
- Peak short-circuit current withstand (upon circuit configuration)
 - In one pole configuration : 10 x (Nominal current)
 - In two poles configuration : 5 x (nominal current)
- Dielectric withstand strength
 - Between live parts in open position : 10 kV - 50 Hz - 1 min
 - Between live parts and earth : 10 kV - 50 Hz - 1 min
 - Between auxiliary contacts and earth : 2.5 kV - 50 Hz - 1 min
 - Between motor and earth : 2 kV - 50 Hz - 1 min
- SCR leakage current breaking capacity (upon request) : 1 A - 100 V DC
- Power breaking capacity up to 100 kA - 100 V DC - L/R < 20 msec : Upon request

Mechanical Data:

- Mechanical endurance (with respect to maintenance instructions) : 20,000 cycles
- Typical duration of opening or closing operation:
 - With motor operation : 3 to 12 seconds
 - With pneumatic operation : Less than 1 second
- Ponctual temperature withstand without equipment damage : 140°C

Soule PBD 2000V DC Disconnect Switch

Soule PBD DC Disconnect Switch

The PBD DC Disconnect Switch is a high quality, extremely robust product. This safety device is simple, transparent to the network, and reliable over time in all environments. Our PBD is a deformable switch, which will move with the expansion and retraction of the busbar system eliminating the need for flexible shunt connections. The PBD is mainly used with and welded directly onto aluminum busbar systems. The electrical contact is made with silver contacts, which give it a strong mechanical endurance with very good electrical data.

Features/Benefits:

- Visible break
- Aluminum welded connections
- Absorbs dimensional variations due to expansion (flexible shunts are not necessary)
- Low and constant voltage drop
- Supported by busbar (no frame required)
- Possibility of covering up totally one side of the disconnect (for protection & isolation)
- Easy connections by welding to high section aluminium busbar
- Large customization possible with:
 - Actuators (motor, pneumatic, manual)
 - Auxiliaries (limit switches, locks, control boxes)
 - Adaptation to the connecting busbar

Highlights:

- Accepts busbar dilatations thanks to built-in deformability (flexible shunts are not necessary)
- All contacts are fitted with solid silver, high temperature brazed (special process)
- Mechanically independent mobile contact arms with high-pressure springs
- Electrical contact with solid pure silver, point to point, contact tips.
- Operation mechanism by a toggle closed system
- Upon request, two poles or change-over design by side association of two disconnects

Applications:

- Output rectifier isolation
- Large power supply disconnect

Ratings:

Volts : 2000V DC

Amps : 20kA to 140kA

Approvals:

- Designed according to IEC 60947-3 / IEC 60077-1

Soule PBD 2000V DC Disconnect Switch

Main Technical Characteristics

Electrical Data:

- Temperature rise at nominal current (with 40°C max. Ambient temperature) less than : 65°C
- Voltage drop at nominal current less than : 60 mV
- Peak short-circuit current withstand (upon circuit configuration) : 8 x (Nominal current)
- Dielectric withstand strength:
 - Between live parts in open position : 10 kV - 50 Hz - 1 min
 - Between live parts and earth : 10 kV - 50 Hz - 1 min
 - Between auxiliary contacts and earth : 2.5 kV - 50 Hz - 1 min
 - Between motor (AC) and earth : 2 kV - 50 Hz - 1 min

Mechanical Data:

- Built-in deformability (longitudinally (dL) / transversally (dT) / axially (dA)) : 20 / 20 / 20 mm (higher values available upon request)
- Mechanical endurance (with respect to maintenance instructions).
- Higher endurance upon : 1000 Cycles
- Typical duration of opening or closing operation:
 - With motor operation : Less than 20 seconds
 - With pneumatic operation : Less than 1 second
- Punctual contact temperature on live parts withstand without equipment damage : 140°C

HSE-HSD Electrolytic Cell Disconnect Switch

Hundt & Weber DC Disconnect Switch

The HSE/HSD Electrolytic Cell Disconnect Switch allows for installation in any position directly into the busduct system without further fixation. One side of the switch is equipped with flexible connectors, thus no further expansion joints are needed. The other side has solid busbar. The design of the switch (ball bearings supporting main switching shaft) and the slight travel of the contacts while switching, require minimal operating force. Thus easy manual operation is possible, or operation by means of a direct acting motor operator with little power consumption. The high current isolators, HSE/ HSD, consist of a system with one or more integrated, encapsulated contact modules. One module is normally rated for a current of 6,000A. If higher ratings are required, adequate numbers of contact modules are connected in parallel and operated with a common mechanism. The principal elements of the switch are standardized, encapsulated contacts, which consist of two connector plates, a high-elastic bellow, and the contacts. These contacts are made of silver alloy with very good electrical data.

Features/Benefits:

- Complete encapsulated main contacts
- High mechanical strength
- Corrosion proofed
- Little operation torque
- Position insensitive
- Positive opening
- Low contact resistance
- Low voltage drop
- Low contact heating
- Extreme high electrical and mechanical durability
- Safe operation, even under extreme ambient temperature
- Auxiliaries (limit switches, locks, control boxes)
- Adaptation to the connecting busbar

Highlights:

- Accepts busbar dilatations thanks to built-in deformability (flexible shunts are not necessary)
- Very compact switch
- Electrical contacts are encapsulated, protecting them from corrosive atmosphere like chlorine or salt
- Easy connections to bolted copper busbar
- Large customization possible with:
 - Actuators (motor, pneumatic, manual)
 - Auxiliaries (limit switches, locks, control boxes)

Applications:

- Output rectifier isolation
- Cell isolation for electrolytic process
- Large power supply disconnect

Ratings:

Amps : 6kA to 60kA

Approvals:

- Designed according to VDE 0110 Gr. C/IEC 60947

CBC Modular Bar Contactors

Elec CBC Bar Contactor: 80 – 6200A

The CBC Bar Contactor is ideal for use in DC applications including; lifting magnets, lifts, electroplating, the iron and steel industry for traction (rolling stock), motor controls, and hoisting equipment, and other applications in harsh conditions. Thanks to its modular constitution, the CBC Bar Contactor from 80 to 6200A can meet most of the requirements that block contactors, although easy to mount, can not.

Features/Benefits:

- Mechanical latching with single or double electrical release (does not change the total dimensions of the contactor).
- Self-protective device for the release coil(s).
- Metallic support for Kirk Key-type lock (lock not supplied).
- Horizontal or back-to-back mechanical locking.
- Poles of different calibers and supplied with different currents.
- Poles without magnetic blowout.
- Reinforced insulation.
- Double insulation for specific applications.
- Tropical treatment n° 2

Highlights:

- 1 to 4 single main poles (2 poles for calibers 4000 and 5000) with copper contact (silver pad contact on request or for specific applications).
- Arc-blowout coil operates only during opening.
- Closing electromagnet mounted on the right side of the poles (on request, it can be mounted on the left), solid iron magnetic circuit with 2 coils.
 - Control circuit supplied from an AC source via a rectifier and power-saved coils (device mounted and cabled on the contactor).
 - Control circuit supplied from a DC source with power saved coils (device mounted and cabled on the contactor)

Applications:

- Electrochemistry - galvanoplasty (reversing polarities), electroplating, etc.
- Lifting magnets and lifts
- Hoisting equipment such as cranes or overhead cranes
- Motor control, rolling mills accessories, "Blooming Mills," mining industry
- Motor controls in foundry industry

Ratings:

Volts : 500V to 1500V

Amps : 1250 to 8000A

Approvals:

- Designed according to VDE 0110 Gr. C/IEC 60947

CEX Field Excitation Contactors

Elec CEX Field Excitation Contactor: 80 – 5000A

The CEX Field Excitation Contactor is used to switch on and cut off the excitation circuit of a machine, inserting a discharge resistor at the terminals of the inductor at the time of the break. The CEX Field Excitation Contactor is for the excitation and de-excitation of power inductors up to 900MW and more. The CEX Contactors are made up of 1, 2 or 3 magnetic arc-blow-out poles and of one opening pole called a "rupturing pole." On opening, the rupturing pole closes before the main poles open.

Features/Benefits:

- Bar contactor is adaptable to customer needs regarding options for high mechanical strength and number of operations
- Electrical or mechanical latching
- Variety of auxiliary contacts

Highlights:

- 1, 2 or 3 magnetic arc-blow-out contactor poles:
 - silver alloy contacts for caliber 80 to 5000 A.
 - copper contacts (on request).
- One magnetic arc-blow-out dosing pole without mechanical overlapping with the contactor poles.
- One mechanical latching with single or double electrical release.
- Magnetic circuit for over-excited coil supplied with DC current:
 - Closing: economy resistor for caliber 80 to 200A, delivered separately.
 - Opening: one NO contact connected in series with the coil opening at the same time as the contactor.

Applications:

- Power generator excitation systems

Ratings:

Volts : 110 to 2000 VDC
Amps : 80 to 6200A

Approvals:

- Designed according to VDE 0110 Gr. C/IEC 60947

Colomix 71

Elec Colomix 71 for the replacement of old asbestos arc chutes.

No one needs to explain how harmful asbestos is. For years people working in all types of industries were exposed to it. Electrotechnology was no exception: asbestos cement was widely used for its excellent thermal and mechanical characteristics. With Colomix 71, we developed a material that presents no hazard to human health, is easy to work with, has excellent mechanical strength and can be machined to any shape. Colomix 71 has the thermal and insulating properties to withstand extremely high temperature densities and dissipate electric arcs. In fact, replacing asbestos blow-out cages with Colomix 71 leads to better performance. Colomix 71 is a mineral insulator for electrical and thermal applications consisting of 59% hydrated aluminum silicate, 38% wollastonite (calcium silicate) and 3% glass fiber. It has excellent mechanical strength at high temperatures (600°C). "S" grade is recommended for electrical applications. Finished parts of that grade are impregnated with high temperature resin.

Features/Benefits:

Colomix 71 is a patented product that is designed to aid in the replacement of cement-asbestos blow-out cages equipping contactors created by an older generation of manufacturers. With Colomix 71, you can create an identical match of your existing blow-cages, while maintaining the equipment's genuine technical characteristics. This innovative material allows you to replace existing blow-cages, without launching a long and expensive R&D study. With Colomix 71 there is no need to change the whole breaking system (circuit breaker, switch, etc.) — only the old blow-out cages with their asbestos shell need to be replaced. The Colomix 71 offers an easy solution to maintenance and asbestos compliance.

Highlights:

This new generation of blow-out cages is 100% compatible with existing contactors. It does not downgrade the contactors in any way, ensuring their perennity. In addition, breaking capacities are notably improved due to a reduction in breaking times.

Colomix 71 is available in three forms:

- 1000x1000 mm sheets in its standard version (930x830 mm available only on request)
- Parts to be machined per customers' drawings, sample or specification
- Molded parts

Applications:

- Replacement of all old asbestos arc chambers and arc chutes

Systems Capability

When you need more than just a switch, our world-class engineering team is ready to provide custom engineering and fabrication to build the High Power Switch system or assembly you need, exactly the way you need it. We can design and build an enclosure for our high power switch products that meets your specific requirements — either in a metallic or polyester fiberglass enclosure, wall mounted or floor mounted, and with controls, if needed. Our team of design engineers are bold problem-solvers and enjoy meeting your High Power Switch challenges head on with innovative engineering and creative solutions. Our engineers incorporate design and construction features that ensure each switch performs reliably, whether it's a rectifier output switch operated once a year or a change-over switch system in an enclosed panel actuated dozens of times a day.

Features/Benefits:

- Customized enclosure to fit your specification
- Customize controls as per your requirements
- Positive opening and visible break
- Rugged anti-torsion construction
- Large customization with: manual, motor & pneumatic drives; auxiliary switches; solenoid interlocks
- Adaptable mounting dimensions

Highlights:

- Metal or fiberglass
- Local or remote controls
- Viewing windows
- Floor, wall or pole mount

Approvals:

- Designed as per UL, CSA, ANSI/IEEE Standards

Please contact our application team at technicalservices.nby@mersen.com or 978-465-4853 for suitable solutions to your requirements.

Applications:

- Fuse Cabinet (above)
- Street Lighting Control (below)

- Power Distribution Changeover Switch (below)

- Enclosed Medium Voltage Disconnect (below)

Thermal Management

Innovative air & liquid cooled heatsinks and cooling systems

Your problem:

You need to protect critical semiconductor and power electronic systems from heat generated during high power applications.

Our solution: Mersen offers innovative thermal management solutions. We deliver patented cooling technology that absorbs and dissipates heat from critical components. Our innovative Fabfin® product was the first “glueless technology” for high performance, high ratio heatsink solutions. Our pioneering products can be found in a wide range of applications and industries including, industrial controls, motor drives, power controls, transportation, communication, medical, solar power and wind power.

Want more information fast? Take advantage of R-Tools® - our free 3D Thermal Modeling software on our website. For quotes or questions on heatsinks and cooling systems, email us at sales.mis@mersen.com or contact applications support at 905-795-0077. You may also visit our website at ep.mersen.com.

Air Cooled Fabfin[®] Heatsink

The first patented “glueless technology” air cooled

Fabfin is a fabricated air cooled heatsink with a height-to-fin spacing ratio greater than an extruded section. Fabfin can be supplied essentially of any size where a multitude of aluminum fins of varying heights and thickness are attached by a swaging process to an aluminum base plate of variable thickness, length and width, on four standard fin spacings. These standard spacings are designated as an FF (8.51 mm), DF (6.86 mm), AF (5.49 mm), or MF (3.43 mm) series. Typical alloy is 6063 for both fins and base plate. Finishes are numerous. No glue is used in the process.

Performance can be modeled within R-Tools.

Features/Benefits:

- Fabricated
- Multiple fins joined to baseplate by swaging process
- Metal to metal construction. Al/Al Cu/Al Cu/Cu
- Immensely rugged
- No epoxy/glue used in fabrication process
- No thermal barrier at fin to baseplate join
- Fin height to spacing ratio much greater than extruded section
- -40°C to + 350°C storage and operating range
- Capable of withstanding extensive vibration
- Tongue and groove construction
- Baseplates can be welded together with fins attached

Highlights:

- Essentially any width, length or height
- Any fin height to spacing ratio up to 46:1
- Anodize finish
- Chromate finish: Hexavalent + Trivalent
- Electroless nickel finish
- Selective use of copper fins

Applications:

- Communications
- Industrial controls
- Medical, Military
- Motor drives
- Power controls
- Solar energy
- Transportation
- Wind energy

Performance:

- Typically 15% lower thermal impedance than a glued solution
- Can be modeled on R-Tools

Air Cooled Fabfin® Heatsink

What you need to know about Fabfin Heatsinks

Welcome to the amazing potential of Fabfin. The design engineer can now leap beyond the limitations of low ratio one piece aluminum extrusions and the thermal barriers of epoxy assemblies by using Fabfin — the high ratio, high performance, immensely rugged, thermal barrier-free aluminum heatsink assembly. Within a broad mechanical envelope lies unlimited possibilities to address your most challenging thermal applications.

All configurations

- L = Length of baseplate
 - Lf = Length of fin
 - W = Width of baseplate
 - Wf = Width over fins
 - T = Thickness of baseplate
 - Tf = Thickness of flange
- Baseplate thickness:
9 mm Min
64 mm Max
 - Non-tooled fin height within each family will be provided by shearing the next taller fin. If quantities dictate we will tool a new fin.
 - Max fin height 118 mm except MF which is 49 mm tall. MF equivalent fins can be achieved by selecting the Hollowfin® on 6.86 mm centers.

Configuration 1

Configuration 2

Configuration 3

Note: Configurable aluminum air cooled assemblies. Four series organized on baseplate slot spacing. Highly flexible width, length and fin arrangement.

Copper options available.

Configuration 1

(without mounting flanges: all slots filled)

- $L = Lf = 1250$
- $W = [Wf + (2 \times \text{shoulder})] = W_{\text{max}}$ (see Fig. 1 Table 2)
- Number of fins = Width indicator (N) corresponding to W (see formulas in Table 3)
- Shoulder Width ≥ 2.5 mm for MF, 3.5 mm \geq AF, DF and FF

Configuration 2

(with mounting flanges; exposed fin slots)

- $L = (Lf + Y1 + Y2) = 1250$
- If flanges Y1 and Y2 = 0, then $Lf = L$
- X1 may equal X2 but both must be specified
- $W = (Wf + X1 + X2) = W_{\text{max}}$ (see Fig. 1 Table 2)
- Flanges X1 and X2 must be ≥ 2.5 mm for MF, ≥ 3.5 mm for AF, DF and FF
- Y1 may equal Y2 but both must be specified
- Number of fins = Width indicator (N) corresponding to Wf (see formulas in Table 3)

Configuration 3

(with mounting flanges; machined surfaces)

- $L = [Lf + Y1 + Y2 + (2 \times 2.5)] = 1250$
- If flanges Y1 and Y2 = 0, then $Lf = L$
- X1 may equal X2 but both must be specified
- $W = [Wf + X1 + X2 + (2 \times \text{shoulder})] = W_{\text{max}}$ (see Fig. 1 Table 2)
- Flanges X1 and X2 must be specified beyond 2.5 shoulder for MF and 3.5 mm for AF, DF and FF
- Y1 may equal Y2 but both must be specified
- Number of fins = Width indicator (N) corresponding to Wf (see formulas in Table 3)
- Tf must be = T – 3.3 in order to remove the fin slots

Air Cooled Fabfin[®] Heatsink Configurator

9-easy steps to configure a Fabfin

The following represents a sample configuration of Figure 3, page 6

STEP 1: Select a series

Select a series for a fin pitch.

Table 1: Fin Pitch

Series	Fin Pitch (CC) (Center to Center)
MF	3.43 mm
AF	5.49 mm
DF	6.86 mm
FF	8.51 mm

Table 1 (above) and Fig. 1 (below) show the four standard Fabfin series based on Fin Pitch (CC). Variables within each series include length, width and thickness of baseplate as well as height and thickness of fins.

Part Number Example: **FF**

Fig 1

Configuration 1

Fig. 2

STEP 2: Select a configuration

All Fabfin baseplates can be configured with or without a mounting flange. To define the configuration see detailed diagrams on page 3. If configuration 2 or 3 are selected please specify the x and y coordinates for the mounting flange area.

Configuration 1

* fully populated, full length fins and without mounting flanges-
all slots filled

Configuration 2

* unmachined exposed flange(s)

Configuration 3

* machined exposed flange(s)

Part Number:

Configuration 1 = **no digit required**

Configuration 2 = 2

Configuration 3 = 3

**(if configurator 2 or 3 is selected the digit/code appears at the very end of the product number)*

Part Number Example: **FF**

Air Cooled Fabfin® Heatsink Configurator

STEP 3: Select a total length

Select the total length in mm *(this is user defined)

eg. $L = L_f = 300 \text{ mm}$

Part Number Example: **FF300**

STEP 4: Select a baseplate thickness

(refer to Table 2)

All Fabfin heatsinks are available with standard 12.7 mm baseplate thickness but many other thicknesses are tooled. The baseplate thickness is typically governed by the mechanical, thermal and cost requirements of the application. Custom baseplate thicknesses can be provided within the range of 9 mm to 64 mm by cutting new extrusion dies or gang slotting of the baseplate. New tooling is coming on-line continuously and we may be able to supply your special needs at no additional cost.

Part Number Example: **FF300T13**

Table 2 (a-d) Baseplate Thickness

Table 2a - MF Baseplate Options

Thickness Reference	Thickness T (mm)	Maximum Width Wmax(mm)
T13	12.7	Up to 305 mm
T00	to be specified	

Table 2b - AF Baseplate Options

Thickness Reference	Thickness T (mm)	Maximum Width Wmax(mm)
T10	9.9	Up to 222 mm
T13	12.7	Up to 524 mm
T15	14.9	Up to 524 mm
T19	19.0	Up to 343 mm
T00	to be specified	

Table 2c - DF Baseplate Options

Thickness Reference	Thickness T (mm)	Maximum Width Wmax(mm)
T10	9.5	Up to 310 mm
T13	12.7	Up to 524 mm
T14	14.2	Up to 337 mm
T15	15.3	Up to 524 mm
T17	17.3	Up to 324 mm
T18	18.3	Up to 400 mm
T00	to be specified	

Table 2d - FF Baseplate Options

Thickness Reference	Thickness T (mm)	Maximum Width Wmax(mm)
T13	12.7	Up to 520 mm
T00	to be specified	

Air Cooled Fabfin® Heatsink Configurator

STEP 5: Select a baseplate material

Choose one of the following materials: **A** = Aluminum
C = Copper

Part Number Example: **FF300T13A**

STEP 6: Determine width indicator (N)

To convert baseplate width to width indicator, select desired baseplate total width (W). To determine Width Indicator (N) use the formula at the bottom of each series table. (refer to Table 3)

i.e. If $W = 260 \text{ mm}$
 $N = \frac{260 - 9.4}{-8.51}$
 $= 29.4$ *(round up to the nearest integer)
N = 30

Refer to Table 3 for standard tooled baseplate widths (W).

Alternatively go to the Fabfin configurator section on the website for a complete listing of all widths and fin counts.

Mersen will manufacture this heatsink by machining the next wider standard baseplate. (refer to Table 3d)

Fin count

Configuration 1: Number of fins = Width indicator (N)
 Configuration 2,3: Substitute Wf into the formula at the bottom of each series in Table 3 to obtain fin count.

Wider widths are frequently supplied by welding Fabfin assemblies together. The swaged fin to baseplate joint is unaffected by the elevated welding temperatures.

Part Number Example: **FF300T13A30**

Fig. 3 Sample Heatsink

Table 3 (a-d) Width Indicator

Table 3a - Standard Tooled Baseplates

Width (mm) W	Width Indicator N	Width Fin to Fin (mm) Wf
127	36	121.4
202	58	196.8
237	68	231.1
264	76	258.6
302	87	296.3

Table 3b - AF Standard Tooled Baseplates

Width (mm) W	Width Indicator N	Width Fin to Fin (mm) Wf
223	40	215.4
234	42	226.4
300	54	292.3
343	62	336.2
349	63	341.7
404	73	396.6
525	95	517.4

Table 3c - DF Standard Tooled Baseplates

Width (mm) W	Width Indicator N	Width Fin to Fin (mm) Wf
257	37	249.4
298	43	290.5
310	45	304.2
325	47	318.0
339	49	331.7
401	58	393.4
524	76	516.9

Table 3d - FF Standard Tooled Baseplates

Width (mm) W	Width Indicator N	Width Fin to Fin (mm) Wf
121	14	113.0
190	22	181.1
274	32	266.2
308	36	300.3
393	46	385.4
521	61	513.0

Air Cooled Fabfin® Heatsink Configurator

STEP 7: Select fin

To select fin material, style and height, please refer to Fig. 4 and Table 4 for standard heights and fin height ratios for each series.

Non-standard fin height within each family will be provided by shearing the next taller fin.

The exact fin height in millimeters should substitute the 000 in the Fin Reference in Table 4. If quantities dictate we will tool a new fin.

- AC = Aluminum Corrugated
- AS = Aluminum Serrated
- AH = Aluminum Hollow
- CF = Copper Flat
- AF = Aluminum Flat

Part Number Example:
FF300T13A30AC118

STEP 8: Select a finish

Choose from the following finishes:

- C = RoHS compliant tri-valent clear chrome
- B = Black Anodize
- A = Clear Anodize
- D = Degrease only

Part Number Example:
FF300T13A30AC118B

STEP 9: (Optional)

Choose legs if desired:

Yes = L

No = no digit required

Part Number Example:
FF300T13A30AC118B

Fig.4a

Fig.4b

Fig.4c

Fig.4d

Note: Take this part number and enter into R-Tools to simulate thermal performance using your selected interface materials and semi-conductors. * (refer to Fig. 3 on page 6 for picture of this configured part FF300T13A30AC118B)

Table 4 (a-d) Fin Styles

AS118	Serrated	118	27:1
AC000	Corrugated	to be specified	
AS000	Serrated	to be specified	

Air Cooled Fabfin® Standards

The range of standard Fabfin® forced convection cooled heatsinks (FFC series) was developed to incorporate standard 119mm square axial fans. The fin spacing of 8.51 mm was selected to provide a 20:1 ratio, the practical heat transfer limit for cooling Power Semiconductors in typical ambient conditions. The standard FFC series will accept 1, 2, 3 or 4 fans. Available in many finishes. The serrated fin thickness of 2.4mm provides near optimum performance when using industry standard axial fans. If some level of performance de-rating is acceptable (approximately 20%) then we recommend that corrugated fins be used. These have a thickness of 1.5 mm and are designated by ordering the 'AC' part numbers. The use of corrugated fins provides a weight savings of approximately 15% and will increase surface area by 7% compared with a straight fin of the same height. The push/pull (PP) option is common for applications where fan redundancy is important. We recommend the use of ball bearing fan(s), specifically for the "pull" end, in order to maximize the fan life due to the elevated operating temperatures. The additional weight of the fan can be offset by using the corrugated fins, if applicable. The adjacent graphs provide a performance guide for heat generating devices ranging in size from point source to 60% coverage.

Air Cooled - Hollowfin[®] Heatsink

The high fin density of the MF series with taller fins

The Hollowfin air cooled heatsink is characterized by the shape of its fins which when mounted on the DF (6.86 mm) base plate effectively duplicates the high fin density MF (3.43 mm) series, but with taller fins. A height to space ratio equivalent to 46:1 occurs when the fin height is 118 mm. The Hollowfin is an ideal candidate to be attached to a copper base plate to maximize performance. No glue is used in the process.

Performance can be modeled within R-Tools.

Features/Benefits:

- All that apply to Fabfin[®]
- 46 :1 fin height to spacing ratio at fin height of 118mm
- Highest performance all aluminum heatsink on the market
- No epoxy/glue used in fabrication process

Highlights:

- Copper baseplate/Aluminum fins available

Applications:

- Communications
- Industrial controls
- Medical
- Military
- Motor drives
- Power controls
- Solar energy
- Transportation
- Wind energy

Performance:

- Can be modeled on R-Tools

Air Cooled Mixed Metals Heatsinks

Enhances heat spreading for high heat flux applications

Combination Fabfin® air cooled heatsinks are available with copper baseplates for concentrated heat sources and aluminum baseplates with copper fins for large area heat sources. Optimization is possible by mixing both aluminum and copper fins.

The heatsink was developed to enhance heat spreading for those semi-conductors developing high heat flux and limited allowable temperature rise. The combination heatsink is offered on MF and AF fin spacing as a standard configurable assembly. However, we do supply copper baseplates with DF (6.86 mm) spacing using a Hollowfin which effectively provides MF fin spacing with fins up to 118 mm high. No glue is used in the process.

Contact the Applications Department for Modeling Assistance at 905-795-0077 x258 or x340.

Features/Benefits:

- All that apply to Fabfin®
- Increased performance with use of copper
- Selective use of copper and aluminum fins
- Copper baseplate and aluminum fins
- Aluminum baseplate with Cu or Al/Cu fins
- Can also apply to dual baseplate

Highlights:

- Essentially any width, length or height

Performance:

- Typically 15 - 25% lower thermal impedance than a glued solution
- Can be modeled on R-Tools with assistance of our Application Department

Air Cooled Integrated Heatsink Modules

A consolidated approach for maximum cooling

Typically power modules and amplifiers are attached to an air cooled heatsink with a multitude of screws together with some form of TIM. The high thermal barrier at the interface can be eliminated by swaging a multitude of fins into a thick base plate and then machining the module features and requirements into the base plate.

Performance can be modeled within R-Tools.

Features/Benefits:

- All that apply to Fabfin®
- Thick baseplate is hogged out
- Detailed internal machining

Highlights:

- Eliminates interface between power supply and heatsink

Applications:

- Microwave
- Military

Performance:

- Can be modeled on R-Tools

Air Cooled Copper Heatsinks

Maximum forced air cooling performance

An all copper Fabfin® heatsink provides maximum forced air cooling performance. The fabrication process is the same as that for an aluminum Fabfin heatsink and is offered on MF and AF fin spacing (3.43 mm and 5.49 mm respectively). While copper provides outstanding performance, the overall cost is high. Other fin spacing can be provided when fins are silver soldered into slots. No glue is used in the process.

Performance can be modeled within R-Tools.

Features/Benefits:

- All that apply to Fabfin®
- Swaged or soldered
- Fins can be taller than 118mm
- Spacing is variable
- Fin thickness is variable
- No epoxy/glue used in fabrication process

Highlights:

- Highest air cooled performance

Applications:

- Anywhere maximum performance is required but where weight is not an issue

Performance:

- Can be modeled on R-Tools

Air Cooled Dual Base Plate Heatsinks

Superb fin efficiency with a no-glue process

Dual base plate air cooled heatsinks (patented) increase fin efficiency with all aluminum or copper/aluminum assemblies. Mixed metal fin arrangements as well as dissimilar baseplates are available. Standard fin height, thickness and spacing are available but few mechanical constraints limit height, width, spacing or thickness of assembly. No glue is used in the process.

Performance can be modeled within R-Tools.

Features/Benefits:

- All that apply to Fabfin®
- Increased performance
- Mixed metals can be used

Highlights:

- Increased fin efficiency by splitting the thermal load

Performance:

- Increased fin efficiency by up to 30%
- Can be modeled on R-Tools

Air Cooled Aluminum Extrusion Heatsinks

Aluminum extrusion air cooled heatsinks are the mainstay for cooling medium power semiconductors. Many shapes are available to fit diverse applications. Thousands of shapes exist in the marketplace. If you do not find your needs amid our existing offerings, we will tool a new shape to meet your needs with minimum order quantities.

Performance can be modeled within R-Tools.

Features/Benefits:

- Lowest cost

Air Cooled Heatpipes

Spreading heat to large area cooling banks via heat pipes

High heat losses from Press-Pack and IGBT power devices can be spread to large area cooling banks via heatpipes. Typical construction employs copper heatpipes and aluminum or copper “Evaporator” and “Condenser” sections.

If electrical insulation is required ceramic insulators can be built into the heatpipes. Working fluids are chosen to suit the application.

Full specifications can be found on our website.

Contact the Applications Department for Modeling Assistance at 905-795-0077 x258 or x340.

Features/Benefits:

- Increased surface area of cooling fins
- Moves thermal load to high performance air cooled bank
- Will transfer high thermal loads
- Copper tube heatpipes
- Working fluid options
- Copper or aluminum evaporator
- Copper or aluminum condenser

Highlights:

- Allows for maximum heat flux

Applications:

- Those applications where typical air cooled solutions cannot meet demand and liquid cooling is unacceptable

Performance:

- Heat transfer performance between air and liquid cooled
- Contact factory applications department

Air Cooled Embedded Heatpipes

The “hot spot” heat evaporator

Typical applications combine the high performance of Fabfin® and the heat spreading of heatpipes. High heat flux in concentrated areas can be spread across a heatsink by placing the hot spot over one end of the heatpipe which becomes the “evaporator” and the heat is transferred to the cooler part of the heatsink where it condenses releasing the heat to the heatsink.

Contact the Applications Department for Modeling Assistance at 905-795-0077 x8631 or x8632.

Features/Benefits:

- Spreads thermal load
- Surface embedded copper heatpipes
- Integrated with Fabfin heatsinks
- Epoxy interface

Highlights:

- No dimensional constraints

Applications:

- High flux heat sources

Performance:

- Contact factory applications department

Liquid Cooled Aquasink® Heatsinks

Robust construction for reliable performance.

The Aquasink liquid cooled heatsink employs an aluminum body and copper tubes. These tubes are embedded in the aluminum body using a mandreling process that expands the copper tube into intimate contact with the aluminum body creating a very robust construction. A smear of specialty grease at the interface of copper and aluminum prevents the possibility of dissimilar metal corrosion. Heat transfer is equal from both mounting surfaces.

Performance can be modeled within R-Tools.

Features/Benefits::

- Aluminum body, straight copper tubes
- Tubes expanded into intimate contact with aluminum body
- Specialty grease prevents corrosion
- Heat transfer equal from both mounting surfaces
- Very rugged

Highlights:

- Practically no physical limitations

Performance:

- Can be modeled on R-Tools

Liquid Cooled Aquasink® Heatsink Configurator

About Aquasink heatsinks

The Aquasink heatsink has been developed to provide the design engineer with a rugged, low cost, high performance heatsink. This Aluminum/ Copper liquid cooled cold plate is suitable for high power, isolated base semiconductors and other heat sensitive components. Aquasink's unique copper tube mandreling technology provides intimate long term contact of the tube with the aluminum cold plate. It is impossible to loosen Aquasink's copper tubes. The integrity of an Aquasink tube is never compromised by flycutting, guaranteeing that an Aquasink will survive the most rigorous of pressure tests.

Embedding process

The embedding process employed to manufacture Aquasink allows you to mount electronic components on both sides of the cooling plate with equal thermal efficiency.

* Please refer to the numbered steps illustrated in this diagram. Step numbers to the right correspond to the steps above.

Base materials

The heat collecting semi-conductor mounting surface is fabricated from extruded 6063 aluminum alloy. Commercial grade ASTM B-75 copper tubes of a size to suit given applications are embedded within the aluminum plate by a proprietary mechanical process that provides an industry unique metal to metal bond between the aluminum and copper. This process is free of heat impeding glue or epoxy at the copper/ aluminum interface. The copper tube location can be specified for practically any dimension from the datum point.

* Tube location and thermal modeling can be performed on R-Tools.

7 EASY STEPS TO CONFIGURE AQUASINK

STEP 1: Select tube diameter

Select tube nominal internal diameter (ID):

AA = 1/4" (6.35 mm)

AB = 3/8" (9.53 mm)

AC = 1/2" (12.7 mm)

AD = 5/6" (7.9 mm)

Part Number Example: AC

STEP 2: Select baseplate length

Select length (L) specified in mm (user defined):

eg. L = 250 mm

Maximum allowable length is 813 mm

Part Number Example: AC250

STEP 3: Select baseplate thickness

Select baseplate thickness (T) minimum 2x ID:

TA = 12.7 mm

TB = 19.1 mm

TC = 25.4 mm

TD = 15.9 mm

Part Number Example: AC250TC

STEP 4: Select baseplate width

Select baseplate width (W) specified in mm (user defined): eg. W = 230 mm

Maximum allowable width is 610 mm

Part Number Example: AC250TC230

STEP 5: Select a finish

Choose from the following finishes:

D = Degrease Only

Part Number Example: AC250TC230D

STEP 6/7: Number of tubes/select configuration

Select number of Tubes (user defined): eg. 6 tubes

Select tube configuration A,B,C,D,E or F

(visit website configuration details): eg. A

Part Number Example: AC250TC230D6A

Liquid Cooled Aquamax[®] Copper Heatsinks

Superb thermal performance in copper

Aquamax[®] copper provides additional performance over aluminum using the same proprietary channeling techniques as aluminum. The vacuum brazed, flux free joint ensures leak and corrosion free construction. Typical external finish is RoHS compliant electroless nickel.

Contact the Applications Department for Modeling Assistance at 905-795-0077 x258 or x340.

Features/Benefits:

- Vacuum brazed copper construction
- Flux free
- Leak free
- Highest thermal performance
- Very rugged

Highlights:

- Custom channels
- Optimized channel design
- No physical constraints

Applications:

- Any high power semiconductor application

Performance:

- Contact factory applications department

Liquid Cooled Aquasurf® Heatsinks

The lowest thermal resistance available

Copper tubes are embedded in the surface of an aluminum plate to provide the lowest thermal resistance between the semiconductor mounting surface and the cooling liquid. Tubes can be bent into complex arrays to ensure the copper surface is directly under the semiconductor chips.

Contact the Applications Department for Modeling Assistance at 905-795-0077 x258 or x340.

Features/Benefits:

- Aluminum body, copper tubes
- Copper tubes embedded in aluminum surface
- Copper tubes can be embedded both sides
- Copper tubes can be custom formed to suit application
- Epoxy interface between copper and aluminum
- Lowest cost

Highlights:

- Custom tube layout
- Exposed copper tubes minimizes thermal interface with semiconductors
- Parallel tube design option equalizes junction temperatures

Applications:

- Any high power semiconductor application

Performance:

- Contact factory applications department

Liquid Cooled Aquamax[®] Aluminum Heatsinks

Maximum thermal performance in aluminum

Aquamax provides maximum thermal performance in aluminum by employing proprietary channeling techniques to optimize coolant velocity at low head loss while providing uniform temperature across the mounting surface. Precision machining techniques used at the vacuum braze, flux free, interface ensure leak and corrosion free construction. Typical external finish is RoHS compliant trivalent chrome.

Contact the Applications Department for Modeling Assistance at 905-795-0077 x258 or x340.

Features/Benefits:

- Vacuum brazed aluminum construction
- Flux free
- Leak free
- Low weight
- High thermal performance
- Very rugged

Highlights:

- Custom channels
- Optimized channel design
- No physical constraints

Applications:

- Any high power semiconductor application

Performance:

- Contact factory applications department

Vacuum-Brazed Cold Plates

2 IGBT (140x190) / 3 IGBT (140x130)

Cooling of Power Electronics

Mersen introduces a new range of vacuum-brazed cold plates to bring effective and reliable cooling solutions to its customers. These brand-new cold plates are specially dedicated to the needs of industrial drives designers.

Features:

- Homogeneous temperature distribution below the component
- Withstand high operating pressure
- No risk of leak (All cold plates are pressure tested before shipping)
- Vacuum-brazing technology insures metal-to-metal flux-free joint
- Optimum pressure drop for medium and low flow rates

Benefits:

- Leak-free and corrosion-free construction
- Twenty-year lifetime expectancy
- High thermal performance

High Performance/Low Cost = Great Value

Serpentine flow pattern

Vacuum-brazing technology

Approvals:

RoHS compliant

Vacuum-Brazed Cold Plates

Press Pack Coolers

For demanding, high performance applications

Patented technology provides the highest performance vacuum brazed, flux free Press Pack Coolers in both aluminum and copper construction.

Full specifications can be found on our website.

Features/Benefits:

- Vacuum brazed construction
- Aluminum or copper
- Flux free
- Leak free
- Mixed metal adaptors
- Highest thermal performance

Highlights:

- Unique design
- Cools all sizes of press pack semiconductors

Applications:

- Any size press pack semiconductor

Performance:

- Contact factory applications department

Cooling Systems

The ultimate integrated cooling solution

To cool the hot fluid exiting a liquid cooled heatsink so that it may be recirculated requires a liquid-to-air heat exchanger working in conjunction with pumps and associated systems.

Full specifications can be found on our website.

Features/Benefits:

- Cools recirculating liquids
- Air cooled radiators
- Copper or aluminum tubes
- Copper or aluminum fins
- Control apparatus

Highlights:

- Compliments liquid cooled heatsinks

Applications:

- Any liquid cooled recirculating system

Performance:

- Contact factory applications department

Product Materials & Tolerances

GENERAL MATERIALS

Baseplates:	Aluminum - 6063-T5, 6061-T6 Copper - C11000
Fins:	Aluminum - 6063-T5, 6061-T6, 1100-H14 Copper - C11000
Legs and Fan Bracket:	Aluminum 6063-T5
Tolerances:	Places Value
	X ± 0.5 mm
	XX ± 0.25 mm
	XXX ± 0.13 mm
Drilled Hole Diameter:	± .13mm

Note: Tighter tolerances can be supplied if required at some additional cost.

Dimensions are in mm unless otherwise stated. Dual measurement convention mm (inches).

FABFIN® (All fin spacings)

Cut to Length:	< 305 mm ± 0.5 > 305 mm ± 1.0
Cut to Width:	± 0.5 mm
Angularity:	Saw Cut ± 1/4° Extrusion ± 1° Machined ± 1/4°
Flatness (max.):	Machined flycut 0.03/25 mm

EXTRUSION

The aluminum extrusions supplied by Mersen comply with the standard commercial tolerances established by "The Aluminum Association Inc.", which roughly translate into the following "rules of thumb" when applied to heatsink sections.

Cutting to Length:	≤ 610mm ± 0.5mm > 610mm ≤ 1220mm ± 1.27mm > 1220mm ± 1.57mm
Flatness (max. deviation):	0.1mm/25mm of width up to 250mm 0.2mm/25mm of width over 250 mm
Roughness/Die Lines:	Depth of defect < 0.1mm
Angularity:	± 1°

MACHINED PARTS

Flatness (max. deviation):	0.03/25mm of width
Roughness:	1.6 rms or better
Angularity:	± 0.25°
Edge to Datum:	± 0.25mm
Feature to Feature:	± 0.13mm

Product Materials & Tolerances

GENERAL FINISH TYPE

Meets the requirements of:

Black Anodize:	MIL-A-8625, Type II, Class 2, Black
Clear Anodize:	MIL-A-8625, Type II, Class 1, Clear
Gold Chromate:	MIL-DTL-5541, Type I, Class 3, Gold
Trivalent Chromate:	MIL-DTL-5541, Type II, Class 3, Clear
Electroless Nickel:	ASTM-B-733
Tin Plated Copper:	Lead Free
Tin Plated Solderable	
Tabs:	Lead Free
Wash:	Degrease Only

AQUASINK®/AQUASURF® - Degrease only

AQUAMAX® - COPPER - Electroless Nickel; degrease

AQUAMAX - ALUMINUM - Trivalent Chromate

SURFACE FINISH FOR FABFIN ANODIZING

The entire family of Fabfin aluminum heatsinks can be anodized without worry of an inconsistent finish. Anodizing, by its nature, requires that hundreds of amperes of DC current be conducted through the entire heatsink body. Any resistance present in the interface (between the fin and the baseplate) would cause the fins to appear “off black” or “grey” once the processing is complete. This is yet another test of the interface between the fin and the baseplate which shows superior performance over alternative assembly techniques. Clip marks which show as white marks in a black anodize finish occur where the electrical contact(s) is/are made. Clip marks can be eliminated by inserting titanium screws into threaded holes in the heatsink to form the required electrical path. This process results in additional cost.

SURFACE “FINISH FREE”

“Finish Free” areas can be provided if required for electrical conductivity.

FABFIN®

OPERATING RANGE

The swaging process which the entire family of Fabfin heatsinks incorporates, allows all assemblies to successfully pass the harshest environmental and physical tests. Storage and operating temperatures of -40°C to +350°C demonstrate that Fabfin heatsinks are unmatched by other less robust methods of construction.

VIBRATION

Fabfin’s durability of design has been independently tested, without failure, to the following parameters. All three axis tested, swept sine wave vibration resonance search from 5-200 Hz with a sweep rate of 0.5 oct./min., Input acceleration amplitude of 0.5 g, A one hour dwell at each resonant frequency, and a twelve hour durability sweep from 5-200 Hz with 0.3 g input.

WELDING

Welding baseplates together (after the addition of fins) to increase overall width beyond 521 mm is common practice since the fin to baseplate join is unaffected by the welding process. If your finish selection is black anodize, please note that a shade of black variance exists along the weld joints.

TEMPERATURE CYCLING

To determine the reliability of the metal displacement swaging process both the FF & MF series Fabfin assemblies were tested by an independent third party laboratory. The results showed that extensive temperature cycling, from -40°C to +120°C, and one time heating to +350°C, had no adverse effect on the performance of the heatsink.

FIN PULL TESTS

A fin pull test was completed, following the temperature cycling period, on a 50 mm length of fin perpendicular to the baseplate, exceeded 900 kgs (18kg/mm) and occurred without failure of the fin to baseplate interface.

MF & AF FABFIN

Specify blind holes wherever possible in the mounting surface. It should be recognized that some streaking may occur at the plugged holes and as such cosmetic requirements must be specified at time of RFQ.

DF & FF FABFIN

Specify that through holes are acceptable in the mounting surface to eliminate the need to plug holes when finishing. It should be recognized that deburring between the fins may leave minor scratches near the through holes and as such cosmetic requirements must be specified at time of RFQ.

R-Tools[®] 3D Heatsink Modeling

Powerful thermal modeling software

Mersen makes it easy and convenient to quickly and accurately model various heatsink configurations using the R-Tools online thermal modeling software program. R-Tools is completely interactive. It uses analytically based design tools allowing you to perform the thermal design of the heatsink concurrent with the optimization of the electrical and manufacturing elements prior to any prototype builds and testing. This invaluable resource reduces your design time and increases the reliability in your finished product.

Features/Benefits:

- Completely interactive on-line thermal design tool for heatsinks.
- Quick and accurate heatsink solutions.
- Analytical models for conduction heat transfer in the solid elements.
- Natural and forced convection heat transfer models in the cooling airflow.
- Reduction in design time and better reliability in the finished product.
- User-friendly approach introduces users to R- Tools.
- Colorful and clear graphics.
- Design tips and notes.
- Step by step approach.
- Liquid and air-cooled heatsinks.
- Graphical source layout.
- Parts library for semi-conductors, thermal interfaces, and fans.
- Fin optimizer solves for optimum heatsink configurations.
- Thermal design output details heatsink performance.
- Heatsink thermal map shows temperature profile of the heatsink baseplate.
- Hydraulic performance chart displays heatsink vs. fan performance curves.

R-Tools[®] 3D Heatsink Modeling

Powerful 3D thermal modeling software

Heatsinks are used with semi-conductor devices to provide more surface area for heat dissipation. Power electronic designers require quick and accurate heat sink solutions. With the advent of the internet, and realizing the potential of providing interactive design capability on the Web, Mersen offers R-Tools; a completely interactive on-line thermal design tool for heatsinks. The R-Tools mathematical engine is located on a web server at ep-us.mersen.com/rtools. R-Tools simulation can be run on an Internet browser, which is capable of utilizing Java Applets. R-Tools thermal modeling is based on a set of analytical models for conduction heat transfer in the solid elements coupled with natural and forced convection heat transfer models in the cooling airflow. The conduction heat transfer model in the baseplate of the heatsink is based on the steady state solution of the Laplace equation for general rectangular geometry. The solution is based on a general three-dimensional Fourier series solution, which satisfies the conduction equation in the base plate. For the forced convection air-cooled fins, an analytical model is used to predict the average heat transfer rate. The model used is a composite solution based on the limiting cases of fully developed and developing flow between parallel plates. Because the R-Tools is analytically based, the solution is achieved within a few seconds, a very short time compared to the several hours required for a full CFD simulation.

R-Tools provides an analytical method for quickly and accurately testing various heat sink configurations. The use of analytically based design tools allows the user to perform the thermal design of the heatsink concurrent with the optimization of the electrical and manufacturing elements prior to any prototype or testing. This approach results in a reduction in design time and better reliability in the finished product.

Free on-line registration

Users may register for R-Tools by visiting our website. Selecting Resources > R-Tools. On the first screen of R-Tools, a menu on the left-hand side of the screen lists selections and options available for users such as: Simulation Menu button allows the user to start a new simulation.

User Option Menu gives the user two options for using R-Tools:

- i) Step by step option is the default option for all new users. This user-friendly approach introduces users to the R-Tools concept of designing heatsinks on-line. Colorful and clear sketches are used to describe the basic dimensions and parameters of the heatsink design. When the user points the cursor in any text box, design tips and notes are displayed in green color at the bottom of the screen.
- ii) For advanced users the Compact Pages option reduces the design screens down to four screens, which reduces the design and browsing time.

File Menu allow users to copy, rename and delete existing simulations.

On simulation screens, the left-hand side menu list the steps of navigating R-Tools through the designing of Mersen

heatsinks. Users have two options to navigate through R-Tools screens as follows:

- a) Navigate step by step through any R-Tools screen by clicking the "Next" button on the bottom of each screen.
- b) Display the desired R-Tools screen by clicking on the screen name on the left-hand side menu.

On the Web:

Visit R-Tools under Resources on our website.

R-Tools[®] 10 Easy Steps

STEP 1: Starting simulation

To start a simulation on R-Tools, there are three options:

- “Create New Simulation” by typing a simulation name and selecting the product which is suitable for the applications: Examples: Extrusion, Fabfin, Aquasink.
- “Simulation Based on Known Part Number” by typing in a simulation name and the appropriate Mersen part number to generate a new simulation: Example: FF300T13A30AC118B.
- “Open Existing Simulation” by selecting the name of the simulation from the drop down list of your previously created simulations. Note: Click the next button to go to the next screen, baseplate dimensions.

STEP 2: Baseplate dimensions

- The sketch on the right hand side of the screen demonstrates the three dimensions of the baseplate.
- Enter the dimensions by typing in the value (mm or inches) in the corresponding text box.
- The user can select a standard thickness or customized one by typing the value in the text box.
- The green design on the bottom right side of the screen will inform the user about Mersen manufacturing capabilities.

STEP 3: Environmental conditions

- “Ambient Temperature” is the temperature of the air cooling the heatsink. “Ambient Temperature” can be entered in °C or °F.
- “Altitude” of the application can effect the cooling capacity of the heatsink because it can change density of the cooling air.

Note: The name of the simulation will always appear on the top of the screen.

R-Tools[®] 10 Easy Steps

STEP 4: Flow conditions

The heatsink can be cooled using one of the heat transfer modes:

- “Natural Convection” mode where air moves through the heatsink due to the buoyancy effects.
- Forced convection mode which has two input options in R-Tools.
 1. “Specific Air Flow”: The user has to enter the appropriate volumetric flow rate of the air cooling the heatsink, or
 2. “Fan From Library”: The user can select a fan from the drop down list.
- For forced convection the user can select the flow direction:
 1. Push, or
 2. Impinging, or
 3. Push/Pull.

Note: By-pass air is not modeled in R-Tools. All air flow data entered is assumed to be presented to the face of the heatsink.

STEP 5: Graphical source layout

A sketch of the main dimensions of the heatsink and the locations of the heat source is shown at the bottom of the screen. To add a heat source on the baseplate of the heatsink, click “Add” button.

R-Tools allows two options for specifying the heat source: i.e. component:

1. Customize the specifications of the device by entering the dimensions, power dissipation and the thermal resistance, R_{jc} of the device in the corresponding text boxes on the screen.
2. Select an industry standard semiconductor from the drop-down list.
 - Users can change the dimensions (W, H) and the location (X1, Y1) of any source on the heatsink graphically or by typing the values in the corresponding text box.
 - To rotate the source on the heatsink, click “Rotate” button.
 - To delete a source, click on the “Delete” button.

STEP 6: Thermal interface material

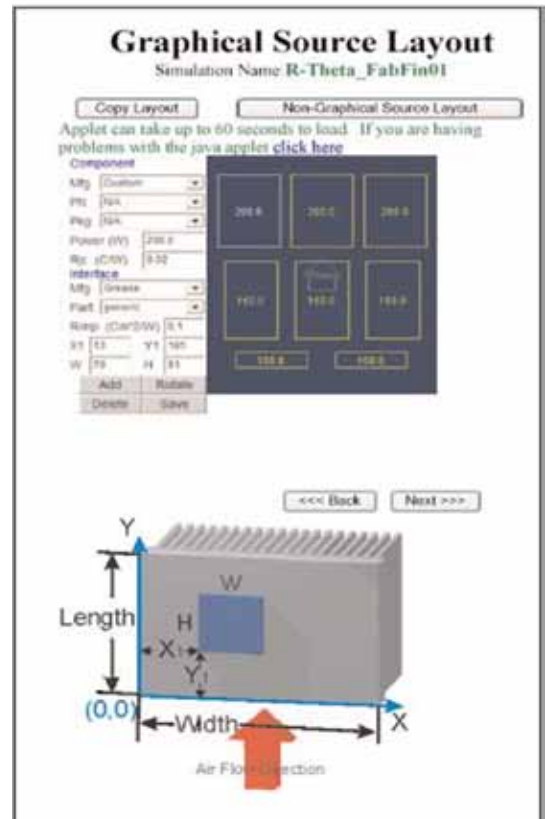

Users can enter the thermal impedance, R_{imp} , of the interface material by:

- Typing its value in the textbox, or
- Selecting the manufacturer and the part number of the interface from the drop down lists.

STEP 7: Save

At this point, you must click “SAVE” before advancing to the “Next” screen!

For more product information visit ep.mersen.com and use catalog search..

R-Tools[®] 10 Easy Steps

STEP 8: Fin selection and optimizer

Users can select from the two following options:

1. Fin optimizer: the user must enter

- a) Thermal constraints i.e. Maximum Temperature allowed on the heatsink.
- b) Physical constraints i.e. Maximum Height allowed for the heatsink.
 - The fin optimizer will solve all fin configurations, which will meet the thermal performance i.e. maximum allowed temperature, and will list all the available selections in the “Fin Optimizer Results” table.
 - Click on any header of the “Fin Optimizer Results” table to sort the table according to the header name ie: the user can sort the table by the mass of the heatsink by clicking on the “Mass” header.
 - When selecting any configuration from the table a green design note will describe the main specification of the selected fin.

2. User defined fin selection:

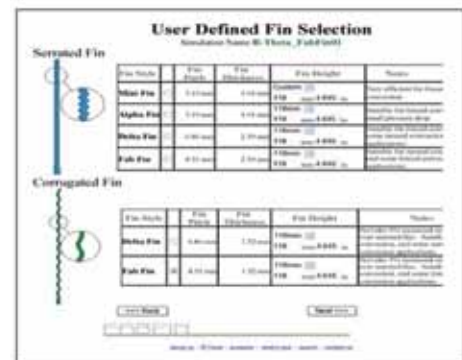

For users familiar with the Mersen Fabfin[®] heatsink configuration, “User Defined Fin Selection” allows users to select the exact Mersen standard fin design as follows:

- MF is the recommended fin design for forced convection applications with maximum height of 49 mm.
- AF is recommended for forced convection applications, which require low pressure drop i.e. low noise levels.
- DF has three fin designs satisfying different application objectives as follows:
 - i) Serrated Fin: for high power dissipation.
 - ii) Corrugated Fin: for weight sensitive applications.
 - iii) Hollowfin: for high power dissipation applications. Hollowfin with the advantage of lower pressure drop performance and lower weight.
- FF is a suitable selection for natural convection heat transfer. FF can be used for relatively low power dissipation forced convection applications. FF has two fin designs as follows:
 - i) Serrated Fin: provides mechanical integrity.
 - ii) Corrugated Fin: larger surface area to provide better cooling for natural convection.

Fin Selection Optimizer Results

Fin Type	Fin Height (mm)	Number of Fins	Mass (g)	Area (cm ²)	Thermal Resistance (K/W)	Overall Temperature (°C)	Pressure Drop (Pa)	Volume (cm ³)	Cost (€)	Max. Temp (°C)	Max. Height (mm)
MF	49	10	4.47	1.17	0.002	100	0.00	0.00	0.00	100	49
AF	49	10	4.47	1.17	0.002	100	0.00	0.00	0.00	100	49
DF	49	10	4.47	1.17	0.002	100	0.00	0.00	0.00	100	49
FF	49	10	4.47	1.17	0.002	100	0.00	0.00	0.00	100	49

Note: Fin height can be customized by the user with certain limitations for each group: MF: minimum of 25 mm and maximum of 49 mm; AF, DC, FF: minimum of 25 mm and maximum of 118 mm. Hollowfin is recommended as an alternative to a MF fin when a fin height higher than 49 mm is needed to dissipate more heat.

STEP 9: Miscellaneous factors:

On this page users can define the following:

- i) “Thermal Plot Size” in the final simulation i.e. for large heatsinks it is better to reduce the display to 50% or 25% of the original size so that the display will appear inside the web page.
- ii) Specify the “Finish” of the final product which can be one of the following:
 - Degreased;
 - Black anodized (recommended for natural convection;)
 - Clear anodized;
 - RoHS compliant clear tri-valent chrome.
- iii) Mounting option where the user can select to attach legs for the heatsink for mounting.

Click “Simulate” for the full thermal simulation for Mersen heatsink.

R-Tools[®] 10 Easy Steps

STEP 10: R-Tools simulation-design output summary

The summary contains three main sections

A) Numerical results summary (contains three sections)

1. Heatsink Design Details Section: The physical dimensions of the heatsink such as weight, fin height, fin spacing, baseplate thickness, fin material, baseplate material etc. It also generates a Mersen part number.

2. Thermal Design Detail Section: A full list of the heat sources is displayed.

For each source the the following information is displayed:

- W & L: foot print of the heat source i.e. device;
- Power: heat dissipation;
- Tsavg: average temperature of the baseplate under the device;
- Tcase: average case temperature;
- Tjunction: average junction temperature;
- Fin Efficiency;
- Thermal Resistances associated with each device.

3. Hydraulic Design Details Section: This section displays three main sub-sections:

- Coolant Information (if applicable):
 - Coolant type air, water, Water/Glycol mix etc.;
 - Supply: shows the fan name, number of fans used in the application and cooling style;
 - Inlet and the outlet coolant temperatures (air or liquid);
- Pressure drop through the entrance, the heatsink core, and exit section. The sum of the pressure drop through the three sections is displayed under total header.
- Reynolds number, which is a measure of the turbulence level in the fluid flow.

B) Heatsink thermal map:

This shows a temperature profile of the heatsink baseplate. Hot spots on the heatsink baseplate are identified by the red color in the thermal map. The maximum temperature under each device is printed on the thermal map in the square which identifies the location of each device.

C) Hydraulic performance chart (fan should be selected):

This displays heatsink performance curve vs. fan performance hydraulic curve. Displaying the performance point of the system helps designers to determine the noise level and fan efficiency. A second degree equation which represents the heatsink performance curve can help designers include the designed heatsink in CFD models.

1. HEATSINK DESIGN DETAILS - metric units

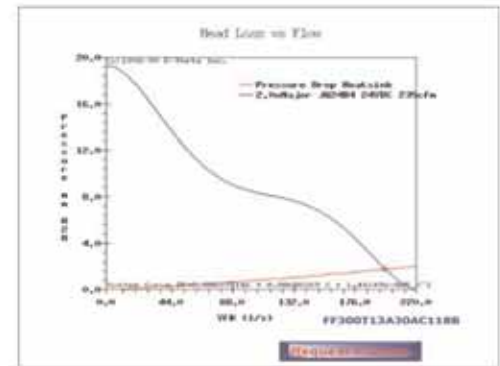

Material	Part No.	Weight	Fin	Fin Details	Baseplate	Notes

Your problem: Power-related problems cost U.S. companies more than \$80 billion dollars a year. Most transients originate from within a facility and nearly 80% of today's overvoltage problems are caused by equipment and power disturbances within the plant. These inner-facility transients are caused, for example, by light load panels switching on and off, motors starting and stopping, and close conductor proximity. Less than 20% of the transient problems originate outside the facility due to lightning strikes, utility grid switching, switching capacitor banks, and electrical accidents.

Our solution: You need fail-safe surge suppression, and the reliability and cost savings of Mersen's Surge-Trap® Surge Protective Devices with patented TPMOV® Technology inside. Surge-Trap SPDs provide a compact, space saving solution. Plus, unlike other SPDs on the market, they do not require additional overcurrent protection, thus offering reduced installation costs.

Want more information fast? For more technical or application-specific information, please call our overvoltage protection experts at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

MERSEN
Expertise, our source of energy

SURGE-TRAP® STZ SERIES EXTERNAL SPD

SURGE PROTECTIVE DEVICE

NEMA DEVICES FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

The Mersen flagship for facility-wide protection, The Surge-Trap® Type 1 STZ Series features surge capacities up to 450kA designed with Mersen's industry leading TPMOV® technology inside making it the safest and most reliable product on the market. Options include surge counter, through-the-door disconnect switch, audible alarm, dry contact, and EMI/RFI filtering. This external SPD can be installed on the line or load side of the service entrance.

FEATURES AND BENEFITS:

- Ideal for new construction bid projects and specification as well as existing facility retrofit
- Available with accessory **Option A** for basic features (LED status indicators) and **Option B** for standard features (EMI/RFI filter, surge counter, Audible alarm and dry contacts)
- Replaceable SPD Module which can be rotated 90 degrees depending on desired cable entry location
- Up to 10 Modes of Protection (L-N, L-L, L-G, N-G)
- 15-year warranty

RATINGS:

- **Volts (U_n):** 120-480VAC
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity (per phase):** 100, 150, 200, 300, 450kA
- **Short-Circuit Current Rating (SCCR):** 200kA
- **Optional EMI/RFI Filter:** Up to -50dB from 10kHz to 100MHz

APPROVALS:

- ANSI/UL 1449 4th Edition, Type 1 SPD, File E210793
- CSA C22.2, Type 1 SPD
- ANSI/IEEE C62.41.1, C62.41.2, C62.45
- UL96A Lightning Protection
- RoHS Compliant

SURGE-TRAP® STZ-R SERIES INTERNAL SPD

SURGE PROTECTIVE DEVICE

NEMA DEVICES FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

For facility-wide surge protection internal to existing equipment such as switchgear, panelboards, or motor control centers, the Surge-Trap® Type 1 STZ-R Series is the obvious choice. The STZ-R series features surge capacities up to 450kA designed with Mersen's industry-leading TPMOV® technology inside making it the safest and most reliable product on the market. Ideal for OEMs and panel builders, this internal SPD can be installed on the line or load side of the service entrance.

FEATURES AND BENEFITS:

- SPD intended to be installed internal to existing switchgear, panelboards, motor control centers, etc.
- Available with accessory **Option A** for basic features (LED status indicators) and **Option B** for standard features (EMI/RFI filter, surge counter, Audible alarm and dry contacts)
- Local or remote human machine interface (HMI) which can be rotated 90 degrees depending on desired cable entry location
- Up to 10 Modes of Protection (L-N, L-L, L-G, N-G)
- 15-year warranty

RATINGS:

- **Volts (U_n):** 120-480VAC
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity (per phase):** 100, 150, 200, 300, 450kA
- **Short-Circuit Current Rating (SCCR):** 200kA
- **Optional EMI/RFI Filter:** Up to -50dB from 10kHz to 100MHz

APPROVALS:

- ANSI/UL 1449 4th Edition, Type 1 SPD, File E210793
- CSA C22.2, Type 1 SPD
- ANSI/IEEE C62.41.1, C62.41.2, C62.45
- UL96A Lightning Protection
- RoHS Compliant

SURGE-TRAP® STXH SERIES

SURGE PROTECTIVE DEVICE

NEMA DEVICES FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

The most compact of the STX series offering, the Surge-Trap® Type 1 STXH meets requirements for UL1449 4th Edition and is suitable for any 120/240VAC split phase application. The STXH Series SPD features TPMOV® technology inside making it the safest product available in its category. Its compact size, performance, and reliability are especially ideal for HVAC applications and direct mounting to air condition disconnect switches.

FEATURES AND BENEFITS:

- Designed with the industry leading Mersen TPMOV® Technology
- Compact footprint designed to mate with AC Disconnect Switches
- LED status indicator (ON = Good, OFF = Replace)
- NEMA 4X enclosure for outdoor or indoor use
- Fits 1/2" knockouts with 18" leads for easy installation
- For use in ANSI/UL Type 1 or 2 SPD installations
- 3 Modes of Protection (L-N, L-L)
- 3-year warranty

RATINGS:

- **Volts (U_n):** 120V Single Phase, 120/240VAC Split Phase
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity (per phase and per mode):** 50kA
- **Short-Circuit Current Rating (SCCR):** 200kA

APPROVALS:

SURGE-TRAP® STXR SERIES

SURGE PROTECTIVE DEVICE

NEMA DEVICES FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

The most popular range in the STX series offering, the Surge-Trap® Type 1 STXR meets requirements for UL1449 4th Edition and is ideal for the replacement of obsolete surge arrestors. The STXR Series SPDs feature TPMOV® technology inside, making them the safest product available. With a small, compact design and line or load installation flexibility, the STXR series is the perfect fit for branch panel and/or individual equipment protection.

FEATURES AND BENEFITS:

- Designed with the industry leading Mersen TPMOV® Technology
- LED status indicator (ON = Good, OFF = Replace)
- NEMA 4X enclosure for outdoor or indoor use
- Fits 3/4" knockouts with 3' leads for easy installation
- Optional mounting bracket for surface mount applications
- Optional audible alarm and remote dry contacts
- For use in ANSI/UL Type 1 or 2 SPD installations
- Up to 10 modes of Protection (L-N, L-L, L-G optional, N-G optional)
- 5-year warranty

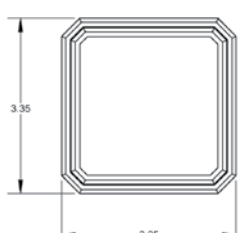

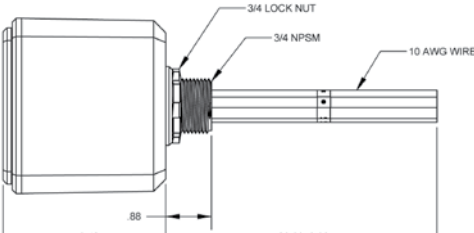

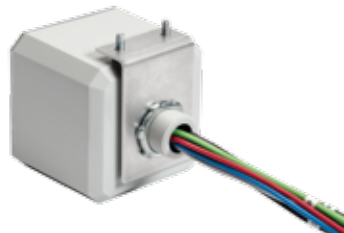

RATINGS:

- **Volts (U_n):** 120-600VAC
- **Nominal Discharge Current Rating (I_n):** 10-20kA
- **Surge Capacity (per phase and per mode):** 50kA
- **Short-Circuit Current Rating (SCCR):** 200kA

APPROVALS:

SURGE-TRAP® STXP SERIES

SURGE PROTECTIVE DEVICE

NEMA DEVICES FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

The Surge-Trap® Type 1 STXP Series offers advanced performance and features over the STXR series including higher surge capacity and phase LED status indicators. The STXP meets requirements for UL1449 4th Edition and has been designed for additional mounting flexibility including mounting feet and flush-mount capability. The STXP features TPMOV® technology inside making it the safest product available. Installation can be done on the line or load side of a panel. The STXP is the perfect fit from service entrance all the way down to an important machine specific control panel.

FEATURES AND BENEFITS:

- Designed with the industry leading Mersen TPMOV® Technology (internally fused)
- Enhanced 100kA surge capacity for longer life and higher single impulse withstand
- Pre-wired with 3' leads for easy installation
- Up to 10 Modes of Protection (L-N, L-L, L-G, N-G)
- 10-year warranty

RATINGS:

- **Volts (U_n):** 120-600VAC
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity (per phase):** 100kA
- **Short-Circuit Current Rating (SCCR):** 200kA

APPROVALS:

- ANSI/UL 1449 4th Edition, Type 1 SPD, File E210793
- CSA C22.2, Type 1 SPD
- ANSI/IEEE C62.41.1, C62.41.2, C62.45
- UL96A Lightning Protection
- RoHS Compliant

SURGE-TRAP® STXT SERIES

SURGE PROTECTIVE DEVICE

NEMA DEVICES FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

The most advanced of the STX series, the Surge-Trap® Type 1 STXT Series comes standard with EMI/RFI Filtering and surge capacities up to 200kA. The STXT features TPMOV® technology inside, making it the safest product available. With line or load side installation flexibility, this unit is a great fit from the service entrance all the way down to each distribution and/or branch panel.

FEATURES AND BENEFITS:

- Premium 200kA surge capacity for longer life and higher single impulse withstand
- Includes EMI/RFI filter for cleaner attenuation
- Mounting hub and mounting feet for installation flexibility
- Optional audible alarm and remote dry contacts
- Up to 10 Modes of Protection (L-N, L-L, L-G, N-G)
- 10-year warranty

RATINGS:

- **Volts (U_n):** 120-600VAC
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity (per phase):** 100kA or 200kA
- **Short-Circuit Current Rating (SCCR):** 200kA
- **EMI/RFI Filter:** Up to -50dB from 10kHz to 100MHz

APPROVALS:

- ANSI/UL 1449 4th Edition, Type 1 SPD, File E210793
- CSA C22.2, Type 1 SPD
- ANSI/IEEE C62.41.1, C62.41.2, C62.45
- UL96A Lightning Protection
- RoHS Compliant

GENERAL PRODUCT SPECIFICATIONS

Mounting:	Female 3/4" – 14 threaded hub Mounting feet with 0.25" diameter holes	Operating & Storage Temperature:	-40°C to +85°C
Wiring:	Wire Lugs for 8 AWG copper	Relative Humidity Range:	0 to 95% non-condensing
Enclosure:	NEMA 4X Non-metallic	Visual End-of-Life Indicator:	GREEN = OK, OUT = REPLACE
Flammability:	UL94-5VA	Frequency:	50-60Hz

SURGE-TRAP® STT SERIES

NEMA DEVICES FOR ANSI/ UL 1449 TYPE 1 AND 2 APPLICATIONS

The Surge-Trap® STT Series meets requirements for UL 1449 4th Edition. It provides a two-year warranty and offers an economical replacement for the former surge arrester category. The Surge-Trap Type 1 SPD features TPMOV® technology inside making it a “no-fuse” surge suppressor that doesn’t require the use of additional overcurrent protection. It can be installed upstream or downstream of the main disconnect.

FEATURES AND BENEFITS:

- Designed with the industry leading Mersen TPMOV® Technology
- LED status indicator by phase (ON = Good, Red = Replace)
- Option for NEMA 2 or NEMA 4X enclosure for indoor or outdoor use
- NEMA 2 option fits 1/2” knockouts for panel mount
- NEMA 4X suitable for panel mount and wall mount
- For use in ANSI/UL Type 1 or 2 SPD installations
- Up to 6 modes of Protection (L-N, L-L)
- 2-year warranty

RATINGS:

- **Volts (U_n):** 120-600AC
- **Nominal discharge current Rating (I_n):** 10-20kA
- **Surge Capacity:** 50kA per phase
- **Short-Circuit Current Rating (SCCR):** 200kA

APPROVALS:

- ANSI/UL 1449 4th Edition, File E210793
- Type 1 Listed for United States
- Type 2 Listed for Canada
- RoHS Compliant
- ANSI/IEEE C62.41.1, C62.41.2, C62.45
- UL 96A Lightning Protection

GENERAL PRODUCT SPECIFICATIONS

Wiring: Pre-wired with 16" (0.4m) 12 AWG conductors

SURGE-TRAP® PLUGGABLE

SURGE PROTECTIVE DEVICE

DIN-RAIL PLUGGABLE SPD FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

Surge-Trap® Pluggable Surge Protective Device (SPD) is a no-fuse, fail-safe surge suppressor featuring Mersen's patented TPMOV® technology inside. UL 1449 4th Edition approved, it is DIN-rail mountable featuring a fail-safe self-protected design, visual indicator, and a small footprint. A remote indicator option provides status to critical control circuitry. The Surge-Trap Pluggable SPD has a high short circuit rating and a thermally protected MOV, which eliminates the need for additional overcurrent protection devices.

NEW AND IMPROVED 75KA RATING

Mersen's DIN-Rail Pluggable SPD is one of a kind - the combination of a robust 75kA surge capacity along with no requirement of backup fusing creates an offering unique to the market. Add this to the reliability and safety of Mersen's patented TPMOV technology and you have a truly superior product.

RATINGS:

- **Volts (U_n):** 120-690VAC
- **Nominal Discharge Current Rating (I_n):** 10-20kA
- **Surge Capacity:** 75kA
- **Short-Circuit Current Rating (SCCR):** 200kA

FEATURES/BENEFITS:

- Easy installation or retrofit
- DIN-rail mountable
- Fail-safe, self-protected design
- Remote indicator
- Visual indicator
- IP20 finger-safe design
- Small footprint
- No additional overcurrent protection devices required
- Easy to replace modules
- 2-year warranty

APPROVALS:

- ANSI/UL 1449 4th Edition, Type 1 Component Assembly SPD, File E210793
- ANSI/IEEE C62.41.1, C62.41.2, C62.45
- RoHS Compliant

GENERAL PRODUCT SPECIFICATIONS

SURGE-TRAP® MODULAR

SURGE PROTECTIVE DEVICE

DIN-RAIL MODULAR SPD FOR ANSI/UL 1449 TYPE 1 AND 2 APPLICATIONS

Surge-Trap® Modular Surge Protective Device (SPD) is a no-fuse, fail-safe surge suppressor featuring Mersen's patented TPMOV® technology inside. UL 1449 4th Edition approved, it is DIN-rail mountable featuring a fail-safe self-protected design, visual indicator, and a small footprint. A remote indicator option provides status to critical control circuitry. The Surge-Trap Modular SPD has a high short circuit rating and a thermally protected MOV, which eliminates the need for additional overcurrent protection devices.

FEATURES AND BENEFITS:

- Easy installation or retrofit
- DIN-rail mountable
- Fail-safe, self-protected design
- Remote indicator (optional)
- Visual indicator
- IP20 finger-safe design
- Small footprint
- No additional overcurrent protection devices required
- 2-year warranty

RATINGS:

- **Volts (U_n):** 120-690VAC
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity (per phase and per mode):** 50kA
- **Short-Circuit Current Rating (SCCR):** 200kA

SURGE-TRAP® STPT2-PV SERIES FOR PHOTOVOLTAIC

DIN-RAIL
PLUGGABLE
SPD FOR
PHOTOVOLTAIC
APPLICATIONS

STPT2 40 PV is the series of devices that provide advanced overvoltage protection to photovoltaic systems by utilizing Mersen's optimized dynamic thermal disconnection system, which does not require additional overcurrent protection (back-up fuse) due to its high short-circuit withstand rating.

These surge protective devices are suitable for all PV applications: large-scale, rooftop, and self-consumption (off-grid) DC installations.

RATINGS:

SURGE-TRAP[®] STMT23 SLIM SERIES

DIN-RAIL MODULAR SPD FOR IEC TYPE 2 + 3 APPLICATIONS

STMT23 20 S is the series of combined Type 2+3/Class II+III devices for discharging voltage surges while providing a very fine voltage protection level, in accordance with IEC/EN 61643-11.

Suitable as the final stage of protection in panels with Type 2 protection devices installed upstream. These SPDs should be installed as close as possible to the equipment being protected. Ideal for limited spaces. Wide range of voltage ratings.

RATINGS:

- **Volts (U_n):** 12-230VAC
- **Nominal Discharge Current Rating (I_n):** 3-10kA
- **Surge Capacity (per phase and per mode):** 6-20kA
- **Short-Circuit Current Rating (SCCR):** 10kA

SURGE-TRAP® STLB SERIES

SURGE PROTECTIVE DEVICE

IN-LINE SPD FOR LED LIGHTING APPLICATIONS

Mersen's SPD for LED lighting applications, the STLB series is a universal solution with enhanced safety delivering peace-of-mind to users and installers. A single device is suitable for single, split, or three-phase applications; can be installed in series or parallel with the luminaire; features leakage current free technology and visual end-of-life indication. It is also UL Recognized (cURus) and IEC certified.

FEATURES AND BENEFITS:

- Universal, certified SPDs which can be safely used in any luminaire and any installation
- Common applications: Roadway Lighting, Parking Lot/Garage Lighting, indoor/outdoor LED signage, industrial manufacturing facilities, all critical 24/7 applications
- Parallel or series connected device
- End-of-life indication via LED or series disconnection
- Leakage Current Free
- Global Compliance to ANSI/UL/CSA and IEC
- Versatile mounting design accommodates vertical or horizontal mounting
- 2-year warranty

RATINGS:

- **Volts (U_n):** 100-277VAC
- **Nominal Discharge Current Rating (I_n):** 3kA
- **Surge Capacity (per phase and per mode):** 10kA
- **Short-Circuit Current Rating (SCCR):** 10kA
- **Load Current Rating (I_L):** 2.5A
- **IEEE C62.41.2 Location Category:** C-High 10kV/10kA

APPROVALS:

- ANSI/UL1449 4th Edition, Type 4 SPD, File E468946
- EN 61643-11 Type 2+3 SPD
- RoHS Compliant

TPMOV[®] TECHNOLOGY

SURGE PROTECTIVE DEVICE

COMPONENT SPD FOR OEM DESIGN AND BUILD

Mersen's patented TPMOV technology eliminates common failure modes that occur in the field with standard metal oxide varistors. Internally the TPMOV is comprised of a voltage clamping device and a disconnecting apparatus that monitors the status of the metal oxide disk, making the TPMOV a fail-safe device. In the event of an overvoltage breakdown, the metal oxide disk is securely disconnected from the system power by an arc shield. Upon failure, the TPMOV is also equipped with a visual pin indicator as well as a normally open micro-switch, providing remote indication if applicable.

FEATURES AND BENEFITS:

- 50% more surge capacity—same footprint: The TPMOV7 is rated for 75kA - 8/20 μ s peak surge current and is available for MCOV from 150V to 320VAC.
- Consistent footprint with 25–40mm MOVs
- Industry-leading, patented TPMOV technology available in 50kA and 75kA surge capacities
- Built-in visual/remote indication optional
- Wave solderable
- No additional overcurrent protective device (fuses) required

RATINGS:

- **Volts (U_n):** 150-550VAC
- **Nominal Discharge Current Rating (I_n):** 20kA
- **Surge Capacity:** 50kA, 75kA
- **Short-Circuit Current Rating (SCCR):** 200kA

APPROVALS:

- ANSI/UL 1449 4th Edition, Type 1 Component Assembly SPD, File E210793
- RoHS Compliant

VSP MOV PROTECTOR FUSE

SURGE PROTECTIVE DEVICE

COMPONENT
DEVICE FOR
OEM DESIGN
AND BUILD

Mersen surge suppression fuses are specially designed to address the protection of SPD systems. Our surge suppression fuses have been specially designed to withstand 8/20 μ Sec surge pulses without opening, allowing the SPD system to react to the surge. All surge suppression fuses have a 8/20 μ Sec surge rating, not a continuous current rating. Under AC short circuit conditions these surge suppression fuses are very current limiting.

FEATURES AND BENEFITS:

- VSP fuses rated 600VAC, 200kA I.R.
- Surge ratings of 5-100kA 8/20 μ Sec capacity
- Various mounting configurations ferrules, blade, bolt-in, pc board mount

RATINGS:

- **Volts:** 600VAC
- **Surge Rating:** 5-100kA 8/20 μ Sec
- **Interrupting Rating (IR):** 200kA

APPROVALS:

- ANSI/UL 248 Special Purpose MOV Fuse, File E60314

SURGE-RATED DISCONNECT SWITCH

COMPONENT
DEVICE FOR
OEM DESIGN
AND BUILD

The Surge Switch is an extremely compact, high performance, manually operated, non-fused switch. It is specifically designed to withstand the high surge current of 200kA with an 8x20 μ s waveform seen in today's transient voltage surge protection device (SPD) applications. Mersen's Surge Switch utilizes a unique contact design that actually clamp contacts tighter during a surge.

FEATURES AND BENEFITS:

- Only surge rated switch available today
- Compact footprint
- Extremely reliable
- Defeatable pistol handles automatically relatch when panel door is closed, no tool necessary to reset latch
- Direct mount handle option

RATINGS:

- **Volts:** 600V AC
- **Amps:** 600A
- **Surge Rating:** 200kA 8x20 μ s wave form

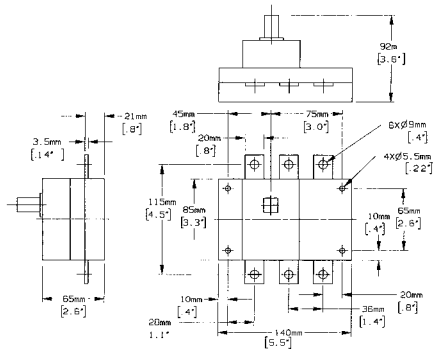

APPROVALS:

- UL Listed Guide NRNT, File E224922

Your problem: You need to achieve code compliance and protect critical power operations with selective coordination. You need a UL Listed industrial control panel that offers remote load-break disconnection capability to emergency circuits.

Our solution: Mersen offers a fully customizable Fused Coordination Panelboard that can simplify the process of achieving code compliance for designers. Mersen's Fusible Shunt Trip Switch has an array of available options that allow for maximum functionality to be built into a single compact panel. The products are custom built to your exact specifications.

Want more information fast? For more technical or application-specific information, please call our Engineered Products experts at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

Fused Coordination Panelboards

ENGINEERED SOLUTIONS

MEET CODE REQUIREMENTS WITH MERSEN'S FUSED COORDINATION PANELBOARDS (MFCP)

The next generation of Fused Coordination Panelboards is here with coordinated protection between overloads and short circuits. Mersen's Fused Coordination Panelboard (MFCP) does not require fuse replacement on common overload conditions and branch circuits can simply be reset. Mersen's Amp-Trap 2000[®] class CC and class J fuses ensure minimal fuse let-thru energies and makes it easy to provide system coordination with our easy 2:1 coordination ratios for short circuits. Mersen's fused selective coordination panelboard is a UL67 listed panelboard that utilizes our commonly available class CC and J fuses.

FEATURES:

Branch Circuit Protection:

- UL Fuse/Circuit Breaker combination
- Resettable overload protection
- True class J and CC protection

Only Three Branch Fuse Sizes:

- 15A to 30A → ATDR30
- 35A to 60A → AJT60
- 70A to 100A → AJT100

Width:

- 20" wide

Main Options:

- Main Lug Only (MLO)
- Main non-fused switch
- Main non-fused switch with fuses

Up to 42 Branch Circuits per Panel

Main Bus:

- Standard silver-plated copper, with optional tin-plated aluminum

Enclosures:

- NEMA 1, 12, 3R

Optional Features:

- UL 1449 Listed surge protection devices (required per NEC 700.8)
- Blown fuse indication (30A, 60A)

Mersen fused coordination panelboards are custom designed products. For catalog number selection please consult factory.

RATINGS:

- **Volts:** 120/208V, 3Ø, 4-wire; 120/240V, 1Ø, 3-wire; 277/480V, 3Ø, 4-wire; 347/600V, 3Ø, 4-wire
- **Amps:** Main Bus Ampacity ranges from 250A to 400A
- **Number of Circuits:** Up to 2 circuits
- **SCCR:** 200kA@600V

APPROVALS:

- UL 67 Listed Panelboard
- UL 50 Listed Enclosure

Meets NEC[®] selective coordination code requirements for the following power systems:

- 700.8 (Emergency)
- 700.27 (Legally Required Standby)
- 708.54 (Critical Operations)

STANDARD PANEL HIGHLIGHTS

- Easy selectivity ratios with upstream fuses
- Voltage: 120/208, 120/240, 277/480, 347/600
- Main Bus: 250A or 400A
- Main Disconnect: MLO, Fused Main or Non-Fused Main
- SCCR: 200kA
- Surge Protection (SPD) optional
- Up to 42 branch circuits per panel
- Standard 20" wide
- Feed through lugs optional
- Surface mount
- Uses commonly available class CC & J fuses

MAIN

- Up to 400A Fused Main Disconnect
- Allows for panel isolation
- Lockout provision
- Visible contacts
- Interlocked with cover

AJT AMP-TRAP 2000[®] FUSES MAIN FUSE

- Time Delay
- 2:1 coordination ratio
- 600VAC interrupting rating 200kA

BRANCH CIRCUITS

- Circuit breaker opens overloads up to 2 times circuit rating
- ATDR, AJT fuses open short circuit currents
- Fuseholder interlocked to prevent opening while energized.
- Circuits up through 100A 1, 2 & 3 pole.
- True Class J and CC protection.

DIMENSIONS (STANDARD NEMA 1 ENCLOSURES)

For standard panels:

Width = 20 inches Depth = 6 inches

Height varies depending on number of circuits and main options.

NEMA 1 ENCLOSURE SPECIFICATIONS

- Tub: Galvanized unpainted steel. One endwall is provided with knockouts, and the other endwall is blank.
- Door: Equipped directory card, flush mount lock
- Trim and Door Finish: ANSI 49 grey baked enamel electrodeposited over cleaned, phosphatized steel

HIGHER RATED PANELS AND BRANCHES

For panels with circuits requiring ratings greater than 100A, Mersen offers a 38" wide panel with fusible switches for over-current protection. These panels can house up to two 20-circuit MFPC panels within it, in addition to fusible switches of up to 600A in various combinations.

- Main Bus Ratings: 600A, 800A, 1200A
- Main Device Ratings: MLO, Fused main disconnect of 600A, or 800A
- Fusible Branch Device Ratings*: 200A, 400A, 600A

*Branch ratings can be fused at standard fuse size increments in between these ratings and meet 2:1 coordination ratios.

Fusible Shunt Trip Switch

Cylindrical Fuse-Links

ENGINEERED SOLUTIONS

EMERGENCY SAFETY EQUIPMENT

Mersen's fusible shunt trip switch is a UL Listed industrial control panel offering remote load-break disconnection capability to emergency circuits. An array of available options allows for maximum functionality to be built into a single compact panel. Panels built for elevator applications feature control transformers (fusing both primary and secondary sides), a fire safety interface relay with a fire alarm voltage monitoring relay, and mechanically interlocked auxiliary contacts. Use of Mersen's Amp-Trap 2000® AJT Class J fuses permits easy selective coordination, while providing the panel and its components with superior current limitation and the ability to withstand high fault conditions. AJT fuses provide added system reliability since no maintenance or periodic testing is required as with other electromechanical overcurrent devices.

APPLICATIONS:

- Elevator controls
- Building emergency systems
- Data processing rooms

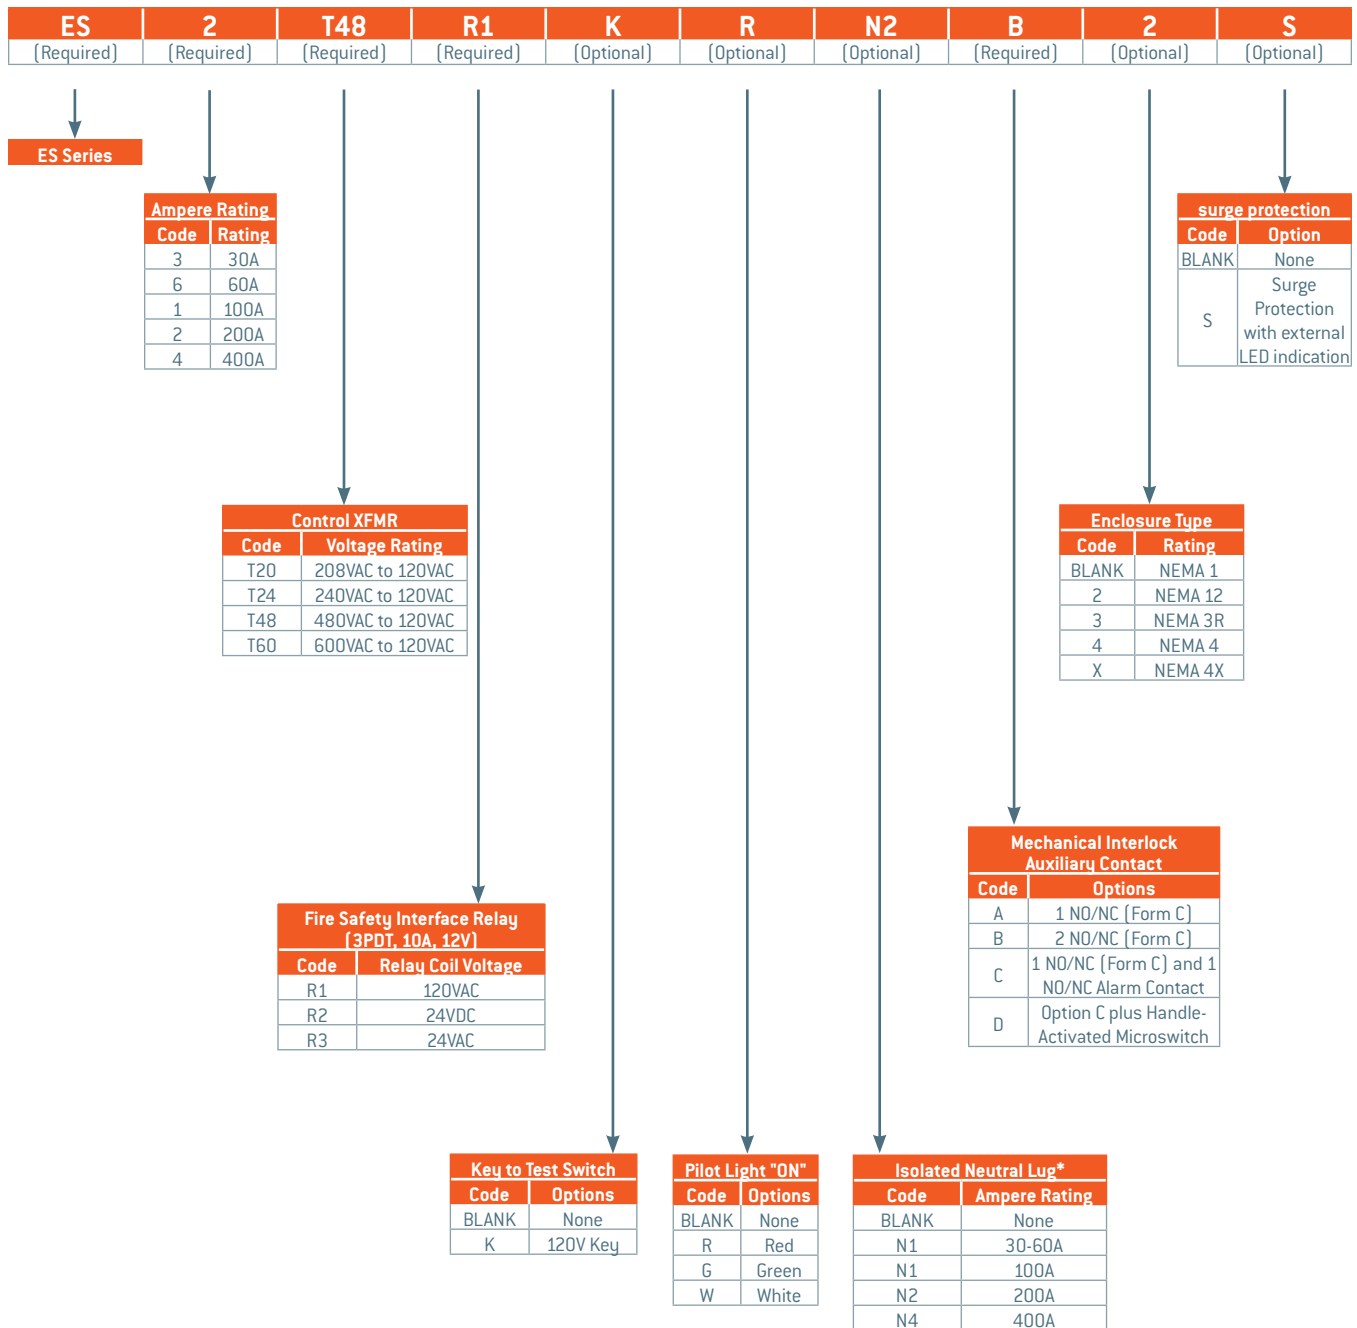

RATINGS:

- **Volts:** 208VAC, 240VAC, 480VAC, 600VAC. DC ratings available; consult factory.
- **Amps:** 30A, 60A, 100A, 200A, 400A
- **SCCR:** Varies depending on system voltage and ampere rating. See table on following page.

APPROVALS:

- cUL 508A Listed Industrial Control Panel, File E233863

ES SERIES - FUSIBLE SHUNT TRIP DISCONNECT SWITCH

Fire Alarm Voltage Monitoring Relay included in all Mersen offerings. No additional part suffixes required. (Competitor Options F1 and F3)

*Neutral lug rating should be greater than or equal to the switch ampere rating. For 200% lug over sizing, select next higher rating. N4 is suitable for 200% over sizing at 400A.

highlights

- Shunt trip switch – allows for tripping of the main line power via remote signal
- Fused switch – provides high current-limitation and short circuit withstand
- Padlockable handle – allows panel to be locked with switch in the off

position ensuring load side power isolation during servicing

optional features

- Primary Voltage (208, 240, 480 or 600 VAC)
- Fire safety relay for control interface (3PDT Relay, choice of Coil Voltage: 120 VAC, 24 VDC or 24VAC)
- Oil-tight key switch to test 2 position selector switch
- Oil-tight power enabled indicator light (choice of colors: red, green or white)
- Isolated neutral lug – 100%. Oversized 200% for excessive Non-Linear loads
- Auxiliary and alarm contacts are both Form C contacts. The auxiliary

contacts change state when the switch is in the on position. Alarm contacts change state when the switch is in the tripped position. The alarm contact is located in place of the second auxiliary contact

- NEMA 12, 3R, 4 or 4X enclosure available
- DC Shunt Trip Switch Version Available – Consult Factory

Application Information

Need to know how? You've turned to the right place...literally.

Your problem:

Whether your objective is optimum protection of motor control equipment, power or control transformers, cable wiring, or lighting and heating circuits — you need fast, accurate information to do the job right. Problem is, not all electrical pros have the same familiarity with circuit protection theories and practices.

Our solution: Every application has its unique challenges. But you'll find the path to a basic understanding of applied circuit protection principles in our Applications section. Be it a glossary of relevant electrical terms. An introduction to fuse construction. Guidance on reading and applying Peak Let-thru curves. Or a look at the most common applications.

Want more information fast? For more technical or application-specific information, please call our Applications/Engineering experts, at 978-462-6662; 416-252-9371 in Canada; or visit our website at ep.mersen.com.

Definitions

Ampacity

The current a conductor can carry continuously without exceeding its temperature rating. Ampacity is a function of cable size, insulation type and the conditions of use.

Ampere Rating

The continuous current carrying capability of a fuse under defined laboratory conditions. The ampere rating is marked on each fuse. Class L fuses and E rated fuses may be loaded to 100% of their ampere rating. For all other fuses, continuous load current should not exceed 80% of fuse ampere rating.

Available Fault Current

The maximum short circuit current that can flow in an unprotected circuit.

Bolt-in Fuse

A fuse which is intended to be bolted directly to bus bars, contact pads or fuse blocks.

Contacts

The external live parts of the fuse which provide continuity between the fuse and the balance of the circuit. Also referred to as ferrules, blades or terminals.

Coordination

The use of overcurrent protective devices which will isolate only that portion of an electrical system which has been overloaded or faulted. See Selectivity.

Current-Limiting Fuse

A fuse which will limit both the magnitude and duration of current flow under short circuit conditions.

Current-Limiting Range

The available fault currents a fuse will clear in less than 1/2 cycle, thus limiting the actual magnitude of current flow.

Dual Element Fuse

Often confused with time delay, dual element is a term describing fuse element construction. A fuse having two current responsive elements in series.

Element

A calibrated conductor inside a fuse which melts when subjected to excessive current. The element is enclosed by the fuse body and may be surrounded by an arc-quenching medium such as silica sand. The element is sometimes referred to as a link.

Fault

An accidental condition in which a current path becomes available which by-passes the connected load.

Fault Current

The amount of current flowing in a faulted circuit.

Fuse

An overcurrent protective device containing a calibrated current carrying member which melts and opens a circuit under specified overcurrent conditions.

I²t (Ampere Squared Seconds)

A measure of the thermal energy associated with current flow. I²t is equal to $(I_{RMS})^2 \times t$, where t is the duration of current flow in seconds.

Clearing I²t is the total I²t passed by a fuse as the fuse clears a fault, with t being equal to the time elapsed from the initiation of the fault to the instant the fault has been cleared.

Melting I²t is the minimum I²t required to melt the fuse element.

Interrupting Rating (Abbreviated I.R.)

The maximum current a fuse can safely interrupt. Some special purpose fuses may also have a "Minimum Interrupting Rating". This defines the minimum current that a fuse can safely interrupt.

Kiloamperes (Abbreviated kA)

1,000 amperes.

Limiter or Back-up Fuse

A special purpose fuse which is intended to provide short circuit protection only.

Overcurrent

Any current in excess of conductor ampacity or equipment continuous current rating.

Overload

The operation of conductors or equipment at a current level that will cause damage if allowed to persist.

Definitions

Peak Let-Thru Current (I_p)

The maximum instantaneous current passed by a current-limiting fuse when clearing a fault current of specified magnitude.

Rejection Fuse Block

A fuse block which will only accept fuses of a specific UL class. Rejection is a safety feature intended to prevent the insertion of a fuse with an inadequate voltage or interrupting rating.

Rejection Fuse

A current-limiting fuse with high interrupting rating and with unique dimensions or mounting provisions.

Renewable Fuse

A fuse which can be restored for service by the replacement of its element.

Renewable Element or Link

The field-replaceable element of a renewable fuse. Also referred to as a renewable link.

Selectivity

A main fuse and a branch fuse are said to be selective if the branch fuse will clear all overcurrent conditions before the main fuse opens. Selectivity is desirable because it limits outage to that portion of the circuit which has been overloaded or faulted. Also called selective coordination.

Semiconductor Fuse

An extremely fast acting fuse intended for the protection of power semiconductors. Sometimes referred to as a rectifier or ultra fast fuse.

Short Circuit

Excessive current flow caused by insulation breakdown or wiring error.

Threshold Current

The minimum available fault current at which a fuse is current limiting.

Time Delay Fuse

A fuse which will carry an overcurrent of a specified magnitude for a minimum specified time without opening. The specified current and time requirements are defined in the UL/CSA/NOM 248 fuse standards.

Voltage Rating

The maximum voltage at which a fuse is designed to operate. Voltage ratings are assumed to be for AC unless specifically labeled as DC.

Fuse Descriptions

High Voltage (over 34,500V)

Expulsion-Type power fuses are available for nominal voltages of 46, 69, 115, 138 and 161kV in current ratings up to 400 amperes. ANSI (American National Standards Institute) Standards are followed.

Medium Voltage (601-34,500V)

Current-Limiting or Expulsion-Type Power Fuses

are general purpose fuses available for nominal voltages of 2.4, 2.75, 4.16, 5.5, 7.2, 8.25, 14.4, 15.5, 23 and 34.5kV in current ratings up to 720 amperes. ANSI and UL Standards are followed.

Current-Limiting Motor Starter Fuses

are available for nominal voltages of 2.4, 4.8 and 7.2kV in current ratings up to 36R (650A). These are special purpose R-Rated fuses for motor short circuit protection only (back-up fuses) and are not full-range power fuses. ANSI and UL Standards are followed.

Summary of Low Voltage Fuses

Fuse Type	Voltage	Ampere Rating	Interrupting Rating – kA	Mersen Part #	UL
Class CC	600VAC	0-30	200	ATDR, ATQR, ATMR	248-4
	300VDC	0-30	100	ATDR, ATQR	
	600VDC	0-30	100	ATMR	
Class G	480/600VAC	0-20/21-60	100	AG	248-5
Class H (Renewable)	250/600VAC	0-600	10	RF/RFS	248-7
Class H (Non-Renew)	250/600VAC	0-600	10	NRN, CRN/NRS, CRS	248-6
Class J	600VAC	0-600	200	AJT, HSJ, A4J	248-8
	300VDC	0-30	100	A4J, HSJ(1-10)	
	500VDC	0-600	100	AJT, HSJ(15-600)	
Class K-5	250/600VAC	0-600	50	OT, OTN/OTS	248-9
Class L	600VAC	601-6000	200	A4BQ, A4BY, A4BT	248-10
	500VDC	601-3000	100	A4BQ	
Class RK1	250/600VAC	0-600	200	A2D, A2K/A6D, A6K	248-12
	600VAC	70-600	200	HSRK	
	250VDC	0-600	100	A2D	
	600VDC	0-600	100	A6D	
Class RK5	250/600VAC	0-600	200	TR/TRS	248-12
	300/600VDC	0-30/35-400	20	TRS-RDC	
Class T	300/600VAC	0-1200/0-800	200	A3T/A6T	248-15
	160/300VDC	0-1200	50/100	A3T/A6T	
Semiconductor	130-4000VAC	0-2000	Up to 300	See Section D	248-13
Glass/Electronic	32-350VAC	0-30	Up to 10	See Section C	248-14
Midget	125/250VAC	0-30	0.2-10	TRM, OTM, GFN	248-14
	500/600VAC	0-30	10,100	ATQ, ATM, SBS	
Plug	125VAC	0-30	10	See Section G	248-11
Cable Protector	250VAC	1-500kcmil Cu or Al	200	2CL	248-1
	600VAC	#2-1000kcmil Cu or Al	200	CP, CPH	
Capacitor	600-5500VAC	25-300	Up to 200	A100C-A550C	Other
Welder	600VAC	100-600	200	A4BX	Other

PT Fuses

Potential transformers require current limiting fuses or equivalent on the primary connection side. Standard PT primary voltages range from 2.4kV to 36kV. Since the power requirement is low (for relays, metering, etc.) fuses of the proper voltage are applied in the 1/2 to 5 ampere range. Several voltage ratings are available, physical sizes vary among manufacturers.

Low Voltages (600V or less)

Many types of low voltage fuses are classified and identified for use in 125, 250, 300, 480, or 600V circuits. UL/CSA/NOM standards are followed. Common types are briefly summarized below:

Fuse Construction And Operation

The typical fuse consists of an element which is surrounded by a filler and enclosed by the fuse body. The element is welded or soldered to the fuse contacts (blades or ferrules).

The element is a calibrated conductor. Its configuration, its mass, and the materials employed are selected to achieve the desired electrical and thermal characteristics. The element provides the current path through the fuse. It generates heat at a rate that is dependent upon its resistance and the load current.

The heat generated by the element is absorbed by the filler and passed through the fuse body to the surrounding air. A filler such as quartz sand provides effective heat transfer and allows for the small element cross-section typical in modern fuses. The effective heat transfer allows the fuse to carry harmless overloads. The small element cross section melts quickly under short circuit conditions. The filler also aids fuse performance by absorbing arc energy when the fuse clears an overload or short circuit.

When a sustained overload occurs, the element will generate heat at a faster rate than the heat can be passed to the filler. If the overload persists, the element will reach its melting point and open. Increasing the applied current will heat the element faster and cause the fuse to open sooner. Thus fuses have an inverse time current characteristic, i.e. the greater the overcurrent the less time required for the fuse to open the circuit.

This characteristic is desirable because it parallels the characteristics of conductors, motors, transformers and other electrical apparatus. These components can carry low level overloads for relatively long times without damage. However, under high current conditions damage can occur quickly. Because of its inverse time current characteristic, a properly applied fuse can provide effective protection over a broad current range, from low level overloads to high level short circuits.

How To Read A Time-Current Curve

A time-current characteristic curve, for any specified fuse, is displayed as a continuous line representing the average melting time in seconds for a range of overcurrent conditions. The melting time is considered nominal unless noted otherwise. Several curves are traditionally shown on one sheet to represent a family of fuses. The family shown here is the Time Delay Class J AJT Amp-trap 2000 fuse.

Information can be accessed from these curves in several ways:

- If a fuse has been selected, the designer can use the curve for that fuse to check its opening time versus a given overcurrent. Example: Using the 30 ampere fuse curve, what is the fuse opening time in seconds at a current of 160 amperes? At the bottom of the sheet (Current in Amperes) find 160 amperes (Pt. A) and follow that line straight up to the point where it intersects the 30A curve (Pt. B). Then follow that line to the left edge (Time in Seconds) and read 10 seconds. (Pt. C). This tells us that the AJT30 will open in 10 seconds on a current of 160 amperes.
- Likewise, for the same fuse we might want to know what current will open the fuse in 0.1 second. On the vertical axis (Time in Seconds) find 0.1 second (Pt. D) and follow that line to the right until it intersects the 30A curve (Pt. E). Then follow that line straight down to the horizontal axis (Current in Amperes) and read 320 amperes (Pt. F). This shows that the AJT30 requires an overcurrent of 320 amperes to open in 0.1 second.
- The curves can be used in other ways by the designer. For example, if a family has been chosen (i.e. Time Delay Class J AJT) and an opening time of approximately 1 second is required at 3000 amperes, what fuse in the family best meets this need? Find the 3000 ampere line on the horizontal axis (Pt. G) and follow it up to the 1 second line (Pt. H). The nearest curve to the right is the AJT400. If the point is not near a curve shown, other intermediate curves are available from the factory.

Sometimes the fuse family or type has not been chosen, so a design requirement can be presented to several family characteristic curves. One fuse type will emerge as a good choice. Voltage rating, interrupting rating, physical size, time delay, etc. are all considerations in the final choice.

AJT Time Delay / Class J

**Melting Time -Current Data
1-600 Amperes, 600 Volts AC**

Low Voltage Fuses For Motor Protection

Code Requirements

The NEC or CEC requires that motor branch circuits be protected against overloads and short circuits. Overload protection may be provided by fuses, overload relays or motor thermal protectors. Short circuit protection may be provided by fuses or circuit breakers.

Overload Protection

The NEC or CEC allows fuses to be used as the sole means of overload protection for motor branch circuits. This approach is often practical with small single phase motors. If the fuse is the sole means of protection, the fuse ampere rating must not exceed the values shown in Table 1.

Most integral horsepower 3 phase motors are controlled by a motor starter which includes an overload relay. Since the overload relay provides overload protection for the motor branch circuit, the fuses may be sized for short circuit protection.

Short Circuit Protection

The motor branch circuit fuses may be sized as large as shown in Table 2 when an overload relay or motor thermal protector is included in the branch circuit. Time delay fuse ratings may be increased to 225% and non-time delay fuse ratings to 400% (300% if over 600 amperes) if the ratings shown in Table 2 will not carry motor starting current.

Some manufacturers' motor starters may not be adequately protected by the maximum fuse sizing shown in Table 2. If this is the case, the starter manufacturer is required by UL 508 to label the starter with a maximum permissible fuse size. If so labeled, this maximum value is not to be exceeded.

Where the percentages shown in Table 2 do not correspond to standard fuse ratings the next larger fuse rating may be used. Standard fuse ratings in amperes:

15	20	25	30	35	40	45	50
60	70	80	90	100	110	125	150
175	200	225	250	300	350	400	450
500	600	700	800	1000	1200	1600	2000
2500	3000	4000	5000	6000			

Fuse Selection Guidelines

What fuse type and ampere rating is best for a given application? The answer depends upon the application and objective to be met. Here are some suggestions.

Which Fuse Class?

UL Classes RK5, RK1, and J are the most popular. The Class RK5 (Tri-onic®) is the least expensive. The Class RK1 (Amp-trap®) is used where a higher degree of current limitation is required for improved component protection or system coordination. The RK5 and RK1 are dimensionally interchangeable.

The Class J time delay fuse (AJT) provides advantages over the RK5 and RK1 fuses. Class J fuses provide a higher degree of current limitation than the RK's. This reduced fault current will reduce arc faults in cases of an arc flash incident.

Motor Branch Circuit

Table 1- Maximum Fuse Rating for Overload Protection

Motor Service Factor or Marked Temperature Rise	Fuse Rating as %* Motor Full Load
Service factor of 1.15 or greater	125
Marked temperature rise not Exceeding 40°C	125
All Others	115

* These percentages are not to be exceeded.

Table 2- Maximum Fuse Rating for Short Circuit Protection

Type of Motor	Fuse Rating as %* Motor Full Load*	
	Non-Time Delay	Time Delay
All Single-phase AC motors	300	175
AC polyphase motors other than wound-rotor:		
Squirrel Cage		
Other than Design E	300	175
Design E	300	175
Synchronous	300	175
Wound rotor	150	150
Direct-current (constant voltage)	150	150

* The non-time delay ratings apply to all class CC fuses.

Low Voltage Fuses For Motor Protection

The Class J fuse is also about half the physical size of the RK5 and RK1 reducing panel space and saving money.

Time Delay vs. Non-Time Delay

Time delay fuses are the most useful fuses for motor branch circuit application. A time delay fuse can be sized closer to motor full load current, providing a degree of overload protection, better short circuit protection, and possible use of a smaller disconnect switch.

What Ampere Rating?

The selection of fuse ampere rating is a matter of experience and personal preference. Some prefer to size time delay fuses at 125% of motor full load amperes. This sizing will provide a degree of overload protection for motors with a service factor of 1.15. Sizing fuses at 125% of motor nameplate amperes in some applications may result in nuisance fuse openings. Time delay fuses sized at 125% may open at motor locked rotor current before some NEMA Class 20 overload relays operate. Nuisance fuse openings may result if Class RK1 or Class J fuses are sized at 125% of motor full load current. These

fuses are more current limiting than the RK5 and have less short time current carrying capability.

Sizing time delay fuses between 125% and 150% of motor full load current provides advantages. The fuse will coordinate with NEMA Class 20 overload relays. Nuisance fuse opening will virtually be eliminated and effective short circuit protection will be maintained.

Protecting IEC Style Motor Starters

The new IEC European style motor starters and contactors are popular but they present different problems in protection. These devices represent substantial savings in space and cost but they have a lower withstand capability than their NEMA counterparts.

In order to achieve the same level of protection for IEC style devices that we expect for NEMA devices, the AJT Class J Time Delay fuse is the best choice, sized at 1.25 to 1.50 times motor full load amperes. Also, the AJT has the advantage of being half the size of RK5 and RK1 fuses and thereby fits the trim IEC package.

Single Phase Motor Fuse Selection UL Classes RK1, RK5, J & CC

Motor HP	Full Load Current	Recommended Ampere Rating

10	50	60	80	90	60	80	90	-	-	-

Minimum - This sizing is recommended if motor acceleration times do not exceed 2 seconds. Minimum sizing with RK1, RK5, and Class J fuses will provide overload relay back up protection but may not coordinate with some NEMA Class 20 overload relays. Minimum sizing is generally not heavy enough for motors with code letter G or higher.

Typical - Suggested for most applications. Will coordinate with NEMA Class 20 overload relays. Suitable for motor acceleration times up to 5 seconds.

Heavy Load - Maximum fuse size in accordance with Table 2. If this fuse size is not sufficient to start the load, RK1, RK5, and J time delay fuse size may be increased to a maximum of 225% of full load amperes. Class CC fuses may be increased to 400% of full load amperes. The Heavy Load column should be used for Design E and high efficiency Design B motor fuse sizing.

If this fuse size is not sufficient to start the load, RK1, RK5, and J time delay fuse size may be increased to a maximum of 225% of full load amperes. Class CC fuses may be increased to 400% of full load amperes. The Heavy Load column should be used for Design E and high efficiency Design B motor fuse sizing.

Medium Voltage Motor Protection

Fuse Application Guidelines

The guidelines for applying R-Rated fuses are significantly different from those applying to low voltage motor fuses. This is because R-Rated fuses are back-up fuses which are intended to provide short circuit protection only for medium voltage starters and motors.

An R-Rated fuse is not designed to protect itself or other circuit components against long term overloads. This is why these fuses are given an R rating, and not an ampere rating. An R-Rated fuse will safely interrupt any current between its minimum interrupting rating and its maximum interrupting rating. The minimum interrupting rating is verified during UL tests for UL component recognition.

R-Rated fuses must be applied in combination with an overload relay and a contactor. The time current characteristics of the fuse and overload relay should be matched so that the contactor interrupts currents below the fuse's minimum interrupting rating while the fuse interrupts fault currents, thus easing duty on the contactor and extending the interrupting ability of the controller.

A medium voltage starter is usually engineered for a specific motor and application. For this reason the starter manufacturer selects the proper fuse R rating and provides the fuses as part of the starter package. Unless the user has good reason, no deviation should be made from the R rating recommended by the starter manufacturer. If the user has an existing starter which is to be applied to a new or different motor, the application should be reviewed with the starter manufacturer. Recalibration of the overload relay(s) or fuses of a different R rating may be required.

Properly sized R-Rated fuses should provide a service life approaching that of the contactor. If fuse openings are experienced with no faults present, the fuses, overload relay or both may be improperly sized. The table in this section is offered as a guideline and shows the maximum motor full load current appropriate for a given R rating. In addition to this table it is advisable to compare the fuse minimum melt time-current curve and the nominal time-current characteristic curve for the overload relay. These curves should intersect at (B) no less than 120% of motor locked rotor current (see figure). This will assure that the contactor will open before the fuse during locked rotor conditions.

The 10 or 3 Second Start

The 10 or 3 second start listed in the table is a start during which the motor accelerates from standstill to rated speed in 10 (or 3) seconds or less. For reduced voltage starting, motor starting current should not exceed 75% of the fuse minimum melt current for the required motor acceleration time.

Consult the factory for application assistance for ratings above 36R.

Fuse/Overload Relay Crossover Point

Where $B \geq 1.2 \times$ locked rotor amperes

Motor Full Load Currents for R-Rated Fuses*

Fuse R Rating	Max. Motor Full-Load Current For Full Voltage Start - Amperes	
	10 sec. start	3 sec. start
2R	28	32
3R	40	45
4R	55	65
5R	65	75
6R	80	95
9R	125	140
12R	165	190
18R	250	280
24R	330	360
36R	500	550

*Note: Always round up to the next larger R rating.

Transformer Protection

This section summarizes transformer overcurrent protection as required by the National Electrical Code (NEC) and Canadian Electric Code.

Transformers - Primary 1000 Volts or Less

If secondary fuse protection is not provided, primary fuses are to be selected according to Table 1. If both primary and secondary fuses are used, they are to be selected according to Table 2.

Table 1- Primary Fuse Only

Transformer Primary Amperes	Maximum Primary Fuse % Rating
9 or more	125*
2 to less than 9	167
less than 2	300

Table 2- Primary & Secondary Fuses

Transformer Secondary Amperes	Maximum Primary Fuse % Rating	
	Primary Fuse	Secondary Fuse
9 or more	250	125*
less than 9	250	167

* If 125% does not correspond to a standard ampere rating, the next higher standard rating shall be permitted.

Transformer Magnetizing Inrush Currents

When voltage is switched on to energize a transformer, the transformer core normally saturates. This results in a large inrush current which is greatest during the first half cycle (approximately .01 second) and becomes progressively less severe over the next several cycles (approximately 1 second) until the transformer reaches its normal magnetizing current.

To accommodate this inrush current, fuses are often selected which have time-current withstand values of at least 12 times transformer primary rated current for .1 second and 25 times for .01 second. Recommended primary fuses for popular, low-voltage 3-phase transformers are shown on the next page. Some small dry-type transformers may have substantially greater inrush currents. For these applications, the fuse may have to be selected to withstand 45 times transformer primary rated current for .01 second.

Secondary Fuses

Selecting fuses for the secondary is simple once rated secondary current is known. Fuses are sized at 125% of secondary FLA or the next higher rating; or at maximum 167% of secondary FLA, see Table 2 for rules. The preferred sizing is 125% of rated secondary current I_{sec} or next higher fuse rating. To determine I_{sec}, first determine transformer rating (VA or kVA), secondary voltage (V_{sec}) and use formulas below.

$$1. \text{ Single Phase : } I_{sec} = \frac{\text{Transformer VA}}{V_{sec}}$$

$$\text{or } \frac{\text{Transformer kVA} \times 1000}{V_{sec}}$$

$$2. \text{ Three Phase : } I_{sec} = \frac{\text{Transformer VA}}{1.73 \times V_{sec}}$$

$$\text{or } \frac{\text{Transformer kVA} \times 1000}{1.73 \times V_{sec}}$$

When I_{sec} is determined, multiply it by 1.25 and choose that fuse rating or next higher rating. [I_{sec} x 1.25 = Fuse Rating]

Transformers - Primary Over 1000 Volts

If in unsupervised locations, fuses are to be selected according to Table 3. Where the required fuse rating does not correspond to a standard ampere rating, the next higher standard rating shall be permitted. In supervised locations, fuses are to be selected according to Table 4.

Table 3- Unsupervised Locations

Transformer Rated % Impedance	Primary Fuse	Maximum % Rating	
		Over 1000V	1000V or Less
6 or less	300*	250*	125*
More than 6 & not more than 10	300*	225*	125*

Table 4- Supervised Locations

Transformer Rated % Impedance	Primary Fuse	Maximum % Rating	
		Over 1000V	1000V or Less
All	250*	-	-
6 or less	300	250	250
More than 6 & not more than 10	300	225	250

* Where fuse sizes do not correspond to a standard ampere rating, the next higher standard rating shall be permitted.

Primary Fuses For 3-Phase LV Transformers

Recommended Primary Fuses for 240 Volt, Three Phase Transformers

Fuses will carry transformer magnetizing inrush current of 25 times full load amperes for .01 second and 12 times full load current for .1 second
 EJO fuses can be used outdoors without an enclosure ¹ the self cooled rating of the transformer

Examples:

1. A new installation has a 300kVA transformer with 4160V primary. It is not fully loaded. What is the typical primary fuse recommended?

A 65 rating (Mersen A055F1DORO-65E or equivalent) is correct. Lower ratings may open when transformer is energized.

2. What is the normal fuse size recommended for a 1500kVA transformer with 12,470V primary?

For this application use a 100E rating A155F2DORO-100E or equivalent which will allow normal overload operations of transformer up to 133% of rating.

Fuses will carry transformer magnetizing inrush current of 25 times full load amperes for .01 second and 12 times full load current for .1 second
EJO fuses can be used outdoors without an enclosure ¹ the self cooled rating of the transformer

Maximum Fuse Size

The Code allows primary fuses to be sized at 250% of transformer primary current rating or next standard fuse rating. Sizing this large may not provide adequate protection. Maximum fuse size should be determined by making sure the fuse total clearing curve does not exceed transformer damage curve. The transformer manufacturer should be consulted to determine transformer overload and short circuit withstand capability.

Primary Fuses For LV Control Transformers

Control circuit transformers used as part of a motor control circuit are to be protected as outlined in Tables 1 & 2 (p. P14) with one important exception. Primary fuses may be sized up to 500% of transformer rated primary current if the rated primary current is less than 2 amperes.

When a control circuit transformer is energized, the typical magnetizing inrush will be 25-40 times rated primary full load current (FLA) for the first 1/2 cycle and dissipates to rated current in a few cycles. Fuses must be sized so they do not open during this inrush. We recommend that fuses be selected to withstand 40 x FLA for .01 sec. and to stay within the NEC guidelines specified above.

For example: 300VA Transformer, 600 V primary.

$$I_{pri} = \frac{\text{Transformer VA}}{\text{Primary V}} = \frac{300}{600} = 1/2A = \text{FLA}$$

The fuse time-current curve must lie to the right of the point 40 x (1/2A) = 20A @ .01 sec.

Secondary fuses are still sized at 125% of the secondary FLA.

The above fuses will withstand 40 x FLA for .01 second except where noted.

+ Secondary fusing required.

* Fuse will withstand 30 x FLA for .01 second.

** Fuse will withstand 35 x FLA for .01 second.

Surge-Trap[®] SPD Application Information

What is the Surge-Trap SPD?

The Surge-Trap is a branded surge protection device (SPD) that utilizes Mersen's patented thermally protected metal oxide varistor (TPMOV[®]) technology. This technology eliminates the need for fuses to be installed in series with the Surge-Trap SPD, which saves money and panel space. Surge-Trap SPD is typically installed in industrial control panels to protect sensitive electrical equipment from harmful voltage transients. Nearly 80% of all transients are caused by equipment or power disturbances within a facility.

What Types of Ratings Do SPDs Have?

Do SPDs have a current rating? This is a trick question! They do not have a continuous current rating however they do have other important current-based ratings. They are required to have a short circuit current rating (SCCR), which is the maximum rms current at a specified voltage the SPD can withstand.

The nominal discharge current (I_n) is new to UL 1449 Third Edition (effective 9/29/09). This is the peak value of the current (20kA maximum) through the SPD (8/20 μ s waveform) where the SPD remains functional after 15 surges.

There are two main voltage ratings for an SPD, the first is maximum continuous operating voltage (MCOV) which is the maximum rms voltage that may be applied to the SPD per each connected mode.

Voltage protection rating (VPR) is determined as the nearest high value (from a list of preferred values) to the measured limiting voltage determined during the transient-voltage surge suppression test using the combination wave generator at a setting of 6kV, 3kA.

How Do I Select The Correct SPD?

When selecting an SPD you must make sure that the available fault current is less than or equal to the SCCR of the SPD. The nominal discharge current should be as high as possible because an SPD with a higher I_n will be able to handle more surges (at lower currents) than one with a lower I_n .

Mersen makes it easy to select the correct Surge-Trap SPD. All you need to know is the system voltage, configuration and short circuit current. All Surge-Trap SPDs have a 200kA SCCR (without fuses), which you need to make sure is not exceeded. From the selection chart, find your voltage configuration and preferred protections modes. There is no need to worry about the nominal discharge current as all Surge-Trap SPDs are rated at the UL maximum 20kA.

Surge-Trap[®] SPD Application Information

How Is an SPD Installed and How Does It Work?

A Surge-Trap SPD is always installed in parallel with the load. When the circuit has the normal operating voltage the Surge-Trap SPD will not be conducting current. Once the system experiences an overvoltage the Surge-Trap SPD will “turn on” and begin to conduct the extra voltage to ground, allowing the load to continue running at the correct voltage. This operation is similar to a pressure relief valve in a steam system.

How Do I Retro Fit an Existing Panel?

Providing there is adequate space, retro fitting an existing panel with a Surge-Trap SPD is easy. Typical industrial control panels will have a main disconnect that feeds a power distribution block (PDB) and then on to the individual loads. The Surge-Trap SPD mounts on standard 35mm DIN-rail typically found inside the panel. It should be installed as close as possible to the PDB and connected with #6-#14 AWG, the wire should not exceed 20” in length. It is important to make sure the wires are not twisted together nor have any loops, as this will result in higher let-thru voltages.

Surge-Trap[®] SPD Application Information

Q1: What is SPD?

A: SPD is an abbreviation for “Surge Protective Device.” A SPD is a device that attenuates (reduces in magnitude) random, high energy, short duration electrical power anomalies caused by utilities, atmospheric phenomena, or inductive loads. Such anomalies occur in the form of voltage and current spikes with duration of less than half an AC cycle. These high-energy power spikes can damage sensitive electronic equipment, such as computers, instrumentation, and process controllers.

Q2: How do surge suppressors work?

A: Surge Suppressors are designed to divert high-energy power away from a load by providing a lower impedance path to common point earth ground. Surge suppressors used most often for panel board protection have metal oxide varistors (MOVs) connected in parallel.

Q3: What types of components make up a surge suppressor?

A: The device most commonly used in an AC surge suppressor is an MOV comprised of solid-state zinc oxide with multiple junctions. MOVs provide low impedance when conducting, and are packaged for specific voltages and current handling capacities. Other devices (more typically found in DC applications) include single junction diodes and gas tubes that ionize at preset voltages.

Q4: Where are surge suppressors installed?

A: AC surge suppressors are typically installed in these three areas:

- At a utility service entrance for protection of an entire facility.
- In distribution panel boards and switchboards for protection of sensitive downstream loads;
- Connected to a wall outlet for individual protection of a specific piece of equipment, such as a computer or solid-state controller.

Q5: What is surge current capacity?

A: Surge current capacity, as defined by NEMA standards, is the maximum level of current a surge suppressor can withstand for a single transient event. This level is used to indicate the protection capacity of a surge suppressor.

Q6: What is clamping voltage?

A: Clamping voltage, also known as suppressed voltage rating (SVR), is the voltage a surge suppressor permits to pass to the attached load during a transient event. Clamping voltage is a performance measurement of a surge suppressor’s ability to attenuate a transient. This performance value is confirmed by Underwriters Laboratories (UL) during tests conducted while evaluating a surge suppressor for listing.

Q7: What features should be considered when selecting a surge suppressor?

A: Two important areas to consider during the selection of a surge suppressor are performance and safety, and include the following criteria:

Performance: 1) surge current capacity; and 2) Short circuit rating.

Make sure your surge device is not fuse limited. Many manufactures need fusing in front of the device to pass UL testing conditions.

Surge-Trap[®] SPD Application Information

Q8: What is important when specifying a SPD?

A: When specifying SPD, submit a clear, concise specification detailing the required performance and design features. A minimum specification should include:

- UL surge rating
- Suppression rating
- Short circuit rating
- Peak surge current per mode (L-N, L-G, and N-G)
- Voltage and configuration of electrical service

Q9: What is the difference between UL 1449 Listed and UL 1449 Component Recognized?

A: UL 1449 Component Recognized products are required to pass the same performance tests as UL 1449 Listed products. The main difference is the listed devices are packaged differently, meaning they are tested and listed in stand-alone enclosures.

Q: What key changes were made in the UL 1449 3rd Edition?

A: The UL 1449 3rd Edition includes all of the 2nd Edition changes plus the addition of more rigorous safety testing requirements. The major differences include (1) change in terminology from Transient Voltage Surge Suppressors to Surge Protective Devices, (2) the UL 3rd Edition is now an American National Standard (ANSI), (3) addition of nominal discharge current ratings and markings (4) duty cycle test at nominal discharge current, and (5) measured limiting voltage now performed at 6kV / 3kA.

Q10: What are C62.41 and C62.45?

A: C62.41 and C62.45 are IEEE standards used to describe the characteristics of a transient and how a surge suppressor is tested to evaluate performance.

C62.41 defines a transient and describes the transient environment at three separate facility locations. These locations are a service entrance (Category C-the most severe), a distribution panel board or switchboard (Category B), and a wall outlet (Category A). C62.41 is also a reference document that specifying engineers refer to for application information for defining a transient environment in a particular facility location. C62.45 describes in detail how a surge suppressor performance test is to be conducted.

Q11. How is the Surge-Trap SPD more cost efficient than other SPD options?

A: The Surge-Trap SPD is a no-fuse surge suppressor.

1. It does not need coordinated fusing or have the expense of the fuses, fuse holder, additional wiring and in meeting the UL or IEC requirements/standards.
2. Surge-Trap's compact design helps save valuable space in the cabinet.
3. Offers modular and pluggable din-rail style with IP20 grade finger-safe protection.
4. Complies with latest UL 1449 Third Edition and IEC 61643-1 Standards.

Surge-Trap[®] SPD Glossary & Definitions

The following definitions apply specifically to surge protective devices (SPD). They are provided for further clarification of the performance specifications in the data sheets.

Crest Value (peak): The maximum value that a wave, surge, or impulse attains. It is generally associated with the front of a wave.

Clamping Voltage: The peak voltage across the surge protective device (SPD) measured under the conditions of a specified surge current and waveform. Peak voltage and peak current are not necessarily coincident in time.

Impulse: A wave (surge) of unidirectional polarity. In testing, the rise time and duration of the impulse are specified, e.g., an 8/20 μ s impulse, a 10/350 μ s impulse.

Maximum Continuous Operating Voltage (MCOV): The maximum rms value of the power frequency voltage that may be applied continuously between the terminals of the surge protective device.

Nominal System Voltage: A nominal value assigned to designate a system of a given voltage class, e.g., 120/240 Volt single phase. Note: see ANSI C84.1-1989

Operating Duty Cycle: One or more operations per unit of time as specified.

Pulse Life: The number of surges of a specified voltage and current amplitude and waveform that may be applied to a SPD without causing a change of more than 10 percent in the clamping voltage. The time interval between surges must be specified.

Maximum Single Impulse Current: The maximum amplitude of current which may be applied for a single 8/20 μ s impulse without causing device failure.

Power Dissipation: The power dissipated by a protective device while connected to an AC line of the rated voltage and frequency while no over voltage condition or surge exists. Steady state power dissipation.

Response Time: The time domain response of a surge protective device to the front of a voltage waveform depends on the rate-of-rise of the incident wave, the impedance of the surge source and connecting wiring, the effects of protective device reactance, and the response behavior of conducting mechanisms within active suppression elements. In other words, response to the front of a wave can be affected more by the test circuit conditions, including lead inductance, than by the response time of the active suppression element.

Surge: A transient wave of current, potential, or power in an electric circuit.

Surge Let-Through: The voltage seen by the protected load, includes the SPD clamp voltage plus the voltage drop in the connecting wires. The part of the surge impulse that passes through the protective device.

Surge Protective Device (SPD): A device for limiting the surge voltage on equipment by discharging or diverting surge current. A SPD should be able to repeatedly perform these functions as specified.

Turn-On Time: The time required for a device to make the transition from an "OFF" state to an "ON" state.

Turn-Off Time: The time required for a device to make the transition from an "ON" state to an "OFF" state.

Voltage-Current (V-I) Characteristics: The relationship between the suppressed voltage and the magnitude of the surge current which induces this voltage.

Semiconductor Protection

Solid state devices have progressed through several generations of sophistication since their introduction in the 1940s. Fuse designs have changed to match solid state protection demands.

The protection task looks simple- choose a fuse of correct voltage and ampere rating which will protect a solid state device (diode, silicon-controlled rectifier, triac, etc.) through a wide range of overcurrents, yet carry normal rated loads without deterioration through a long life.

Solid state power devices operate at high current densities. Cooling is a prime consideration. The fuse should be cooled with the solid state device. Cycling conditions must be considered. The ability of solid state devices to switch high currents at high speed subjects fuses to thermal and mechanical stresses. Proper fuse selection is mandatory for long-term reliability.

For application guidelines, request the Mersen publication titled **Power Semiconductor Fuse Application Guide**, and the software program titled **Select a Fuse for Power Electronics**.

DC Circuit Protection

AC applications are more common than DC. This is why fuses are generally designed, tested and rated for AC. Fuses rated for AC are also capable of DC circuit interruption. The key question is how much DC voltage interrupting capability does an AC rated fuse have? There is no safe rule of thumb that will convert AC voltage rating to a DC voltage rating. Testing is required to determine the DC voltage rating of a fuse. This section covers AC fuses that have been tested for DC applications. Mersen is a leader in DC protection, offering a line of DC fuses. Contact Technical Services for further information.

DC Circuit Parameters

The degree of difficulty of interrupting a DC circuit is a function of the voltage, current and circuit time constant. The higher the voltage and time constant, the more difficult the interruption is for the fuse.

Time constant is defined as $t = L/R$ where:

- t** is time constant in seconds
- L** is inductance in henrys
- R** is resistance in ohms

If rated voltage is applied, 63% of rated current will be reached in one time constant.

DC Short Circuit

Graph A shows the relationship of current as a function of time during a DC short circuit.

Solid state devices have relatively short thermal time constants. An overcurrent which may not harm an electromechanical device can cause catastrophic failure of a solid state device.

Many solid state devices have an overcurrent withstand rating which is termed "I²t for fusing". These values are found in most power semiconductor application handbooks.

Fuses intended for solid state device protection are rated in terms of total clearing I²t. Fuses and devices are matched so that the total clearing I²t of the fuse is less than the withstand I²t for the device.

The published fuse total clearing I²t values are derived from short-circuit test oscillograms of the fuse under controlled conditions. The end application can vary significantly from the tested conditions. The specifier must take these differences into account since they will affect fuse clearing I²t.

Graph A- Current as a Function of Time During a DC Short Circuit

Instantaneous Current: $I_{INST} = I_{SC} [1 - e^{-n}]$

RMS Current: $I_{RMS} = I_{SC} \sqrt{1 + \frac{2e^n}{n} - \frac{e^{-2n}}{2n} - \frac{1.5}{n}}$

Where I_{SC} = short circuit current, n = number of time constants

Example

Given: Voltage = 600VDC
 Circuit Resistance (R) = 0.1 ohm
 Circuit Inductance (L) = 1.0 x 10⁻³ henry

$$I_{SC} = \frac{V_{DC}}{R} = \frac{600V}{0.1 \text{ ohm}} = 6000 \text{ Amperes}$$

$$t \text{ (time constant)} = L/R = \frac{1.0 \times 10^{-3} \text{ henry}}{0.1 \text{ ohm}} = .01 \text{ second}$$

In the example, if a short circuit occurs, the instantaneous current will rise to .63 x 6000 = 3780 amperes in .01 second (one time constant). In .05 second (5 time constants) the short-circuit current will reach its ultimate value of 6000 amperes.

DC Circuit Protection

Typical Time Constants

The time constant of a circuit is a function of the resistance and inductance of the components in the circuit. Here are typical time constants associated with the different DC voltage sources:

Less than 10 milliseconds	Battery supply of capacitor bank
Less than 25 milliseconds	Bridge circuit
10 to 40 milliseconds	Armature circuit of DC motor
1 second*	Field winding of DC motor

* Where time constants exceed 100 milliseconds, we do not recommend the use of fuses. A fuse can be used to interrupt short circuits in these cases, but only under conditions where the inductance (load) is effectively by-passed.

Maximum parallel conductor inductance can be assumed to be less than $.5 \times 10^{-6}$ henry per foot of conductor. Graph B approximates conductor inductance based on conductor size and spacing.

Conductor End Views

Graph B- Conductor Inductance

Third Party Approval Listing

Underwriters Laboratories and the Mine Safety and Health Administration (MSHA) are third party organizations which test and list or approve fuses for DC application, respectively.

Two UL standards exist for the DC rating of fuses. UL 248, entitled Low Voltage Fuses which provides for both AC and DC rating of UL class fuses in accordance with the Code. The previous standard UL 198L has been absorbed into UL 248. UL 198M, entitled Mine-Duty Fuses addresses the DC rating of Class R and Class K fuses intended for the short circuit protection of trailing cables in mines. UL198M is equivalent to the requirements of MSHA, which are administered by the United States Department of Labor. The MSHA requirements for approval of DC rated fuses are specified in the Code of Federal Regulations, Title 30, Part 28.

Table 1 shows the voltage ratings and time constants associated with these standards.

Mersen fuses which have been tested and rated for DC by third party certification agencies are shown in Table 2 and Table 3. The Mersen Applications Engineering Department should be contacted for assistance with applications not served by these products.

Table 1- DC Parameters of UL and MSHA Standards

Standard	Voltage	Time Constant	Test Current
UL248	Up to 600V DC	.01 second	10kA or higher
MSHA & UL198M	300 or 600V DC	.016 second	10kA or higher
		.008 second	1kA to 9.99kA
		.006 second	100A to 999A
		.002 second	Less than 100A

Temperature De-Rating

Ampere ratings for fuses are based on specific test conditions. External factors which influence the ampere rating of a fuse are terminal connections, air flow across the fuse, and ambient temperature.

The following formulas should be used when de-rating a fuse's ampere rating for use at an increased ambient temperature of up to 80°C.

80°C Maximum ambient temperature for installations.

Temperature De-Rating for Low Voltage Fuses

Let-Thru Current and I^2t

Current limitation is one of the important benefits provided by modern fuses. Current-limiting fuses are capable of isolating a faulted circuit before the fault current has sufficient time to reach its maximum value. This current-limiting action provides several benefits:

- It limits thermal and mechanical stresses created by the fault currents.
- It reduces the magnitude and duration of the system voltage drop caused by fault currents.
- Current-limiting fuses can be precisely and easily coordinated under even short circuit conditions to minimize unnecessary service interruption.

Peak let-thru current (I_p) and I^2t are two measures of the degree of current limitation provided by a fuse. Maximum allowable I_p and I^2t values are specified in UL standards for all UL listed current-limiting fuses, and are available on all semiconductor fuses.

Let-Thru Current

Let-thru current is that current passed by a fuse while the fuse is interrupting a fault within the fuse's current-limiting range. Figure 1 illustrates this. Let-thru current is expressed as a peak instantaneous value (I_p).

I_p

I_p data is generally presented in the form of a graph. Let's review the key information provided by a peak let-thru graph. Figure 2 shows the important components.

- (1) The X-axis is labeled "Available Fault Current" in RMS symmetrical amperes.
- (2) The Y-axis is labeled as "Instantaneous Peak Let-Thru Current" in amperes.
- (3) The line labeled "Maximum Peak Current Circuit Can Produce" gives the worst case peak current possible with no fuse in the circuit.
- (4) The fuse characteristic line is a plot of the peak let-thru currents which are passed by a given fuse at various available fault currents.

Figure 3 illustrates the use of the peak let-thru current graph. Assume that a 200 ampere Class J fuse (#AJT200) is to be applied where the available fault current is 35,000 amperes RMS. The graph shows that with 35,000 amperes RMS available, the peak available current is 80,500 amperes ($35,000 \times 2.3$) and that the fuse will limit the peak let-thru current to 12,000 amperes.

Why is the peak available current 2.3 times greater than the RMS available current? In theory, the peak available fault current can be anywhere from $1.414 \times$ (RMS available) to $2.828 \times$ (RMS available) in a circuit where the impedance is all reactance with no resistance. In reality all circuits include some resistance and the 2.3 multiplier has been chosen as a practical limit.

Let-Thru Current and I²t

I_p versus I²t

I_p has a rather limited application usefulness. Two fuses can have the same I_p but different total clearing times. See Figure 4.

The fuse that clears in time A will provide better component protection than will the fuse that clears in time B.

Fuse clearing I²t takes into account I_p and total clearing time. Fuse clearing I²t values are derived from oscillograms of fuses tested within their current-limiting range and are calculated as follows:

The “t” in the equation is the total clearing time for the fuse. To be proper, I²t should be written as (I_{RMS})²t. It is generally understood that the “I” in I²t is really I_{RMS}, and the RMS is dropped for the sake of brevity.

$$I^2t = \int_0^t I^2 dt$$

Note, from Figure 4, since clearing time “B” is approximately twice clearing time “A”, the resultant I²t for that fuse will be at least twice the I²t for the fuse with clearing time “A” and its level of protection will be correspondingly lower.

The I²t passed by a given fuse is dependent upon the characteristics of the fuse and also upon the applied voltage. The I²t passed by a given fuse will decrease as the application voltage decreases. Unless stated otherwise, published I²t values are based on AC testing. The I²t passed by a fuse in a DC application may be higher or lower than in an AC application. The voltage, available fault current and time constant of the DC circuit are the determining factors.

Fuse I²t value can be used to determine the level of protection provided to circuit components under fault current conditions. Manufacturers of diodes, thyristors, triacs, and cable publish I²t withstand ratings for their products. The fuse chosen to protect these products should have a clearing I²t that is lower than the withstand I²t of the device being protected.

Fuse Let-Thru Tables

Apparent RMS Symmetrical Let-Thru Current

Although the current-limiting characteristics of current-limiting fuses are represented in Peak Let-Thru charts, an increasingly easy to use method of presenting this data uses Peak Let-Thru tables. The tables are based on Peak Let-Thru charts and reflect fuse tests at 15% power factor at rated voltage with prospective fault currents as high as 200,000 amperes. At each prospective fault current, let-thru data is given in two forms for an individual fuse - I_{rms} and I_p. Where I_{rms} is the “Apparent RMS Symmetrical Current” and I_p is the maximum peak instantaneous current passed by the fuse, the I_p let-thru current is 2.3 times I_{rms}. This relationship exists between peak current and RMS available current under worst-case test conditions (i.e. closing angle of 0° at 15% power factor).

Let-thru tables are easier to read than let-thru charts. Presenting let-thru data in table versus chart format reduces the possibility of misreading the information and saves time. These tables are also helpful when comparing the current-limiting capability of various fuses.

Bus Duct Short-Circuit Protection

Bus duct listed to the UL 857 standard is labeled with a “short-circuit current rating”. To earn this rating the bus duct must be capable of surviving its “short-circuit current rating” for 3 full cycles (60 Hz basis).

The following table shows the potential short-circuit current ratings for both feeder and plug-in bus duct. Also shown are the peak instantaneous currents the bus duct must be capable of withstanding to earn a given “short-circuit current rating”.

Current-limiting fuses may be used to protect bus duct from fault currents that exceed the bus duct “short-circuit current rating”. The fuse will provide short-circuit protection if fuse peak let-thru current does not exceed the bus duct peak instantaneous withstand current. In addition, the fuse total clearing curve must fall to the left of the bus duct short-circuit current rating at the 3 cycle (.05 sec.) point. The fuse ampere ratings shown in this table satisfy both of these requirements.

Example:

In a 480V circuit with 100,000A available short-circuit current, what maximum size fuse can be used to protect feeder bus duct which has a 42,000 short-circuit rating?

Answer:

From the table, a Mersen 1600A Class L fuse A4BQ1600 will protect this bus duct up to 100,000 amperes.

Short Circuit Current Rating in Amperes	Feeder & Plug-In Fuse Bus Duct Peak Instantaneous Withstand Current in Amperes	Maximum Mersen Fuse for Short Circuit Protection*		
		50,000A	100,000A	200,000A

Class L (A4BQ)

Capacitor Protection

The primary responsibility of a capacitor fuse is to isolate a shorted capacitor before the capacitor can damage surrounding equipment or personnel. Typical capacitor failure occurs when the dielectric in the capacitor is no longer able to withstand the applied voltage. A low impedance current path results. The excessive heat generated builds pressure and can cause violent case rupture. A fuse will isolate the shorted capacitor before case rupture occurs.

Fuse Placement

The Code requires that an overcurrent device be placed in each ungrounded conductor of each capacitor bank (see Figure 1). The Code further requires that the rating or setting of the over-current device be as low as practicable. A separate overcurrent device is not required if the capacitor is connected on the load side of a motor-running overcurrent device.

Fusing per the Code provides reasonable protection if the capacitors are the metallized film self-healing type. If not, each capacitor should be individually fused as shown in Figure 2.

Fusing each individual capacitor is especially important in large banks of parallel capacitors. Should one capacitor fail, the parallel capacitors will discharge into the faulted capacitor and violent case rupture of the faulted capacitor can result. Individual capacitor fusing eliminates this problem.

If the capacitors are to be placed in banks comprised of both series and parallel combinations, the capacitor manufacturer must be consulted for fuse placement recommendations. The opening of improperly placed fuses can cause overvoltage and result in damage to other capacitors in the network.

Ampere Rating

How much overcurrent can a capacitor withstand? What effects do neighboring capacitors have on the inrush of a given capacitor? These and other questions influence fuse selection. Circuit analysis can be very complex. It is best to consult the capacitor manufacturer for specific recommendations.

For applications 600V or less in lieu of specific fusing recommendations from the capacitor manufacturer, we suggest a Mersen A60C Type 121 or an A6Y Type 2SG fuse sized at 165% to 200% of the capacitor's current rating (contact factory for technical data). If these fuses are not dimensionally acceptable, then a non-time delay Class J or Class RK1 fuse could be used and sized at 185% to 220% of the capacitor's current rating.

For applications over 600V to 5.5kV, we suggest Amp-Trap A100C to A550C capacitor fuses. These medium voltage fuses are available in a variety of voltage ratings and mounting configurations. Refer to pages E36 for specific data. Medium voltage capacitor fuses are sized at 165% to 200% of the capacitor current rating.

Capacitor fuses are selected for their ability to provide short circuit protection and to ride through capacitor inrush current. Inrush current is affected by the closing angle, capacitance, resistance and inductance of the circuit, and varies from one application to another. Inrush lasts for less than 1/4 cycle and is typically less than 25 times the capacitor's current rating.

Steady state capacitor current is proportional to the applied voltage and frequency. Since voltage and frequency are fixed in power factor correction applications, the capacitor is not expected to be subjected to an overload. Therefore, capacitor fuses are not selected to provide overload protectors for the capacitor.

Figure 1

Figure 2

Capacitor Protection

kVAR vs. AMPS

The capacitor's current rating can be derived from its kVAR rating by using the following formula:

$$\frac{\text{kVAR} \times 1000}{\text{volts}} = \text{amps} \quad 1 \text{ kVAR} = 1000\text{VA (Reactive)}$$

Example#1: What fuse would you recommend for a three phase capacitor rated 100kVAR at 480 volts?

$$\frac{100,000 \text{ volt-amps}}{480 \text{ volts}} = 208 \text{ amps}$$

To determine line current, we must divide the 208 amps, which is the three phase current by $\sqrt{3}$

$$\frac{208}{\sqrt{3}} = 120 \text{ amps}$$

If an A60C Type 121 fuse is to be used, size the fuse at 165% to 200% of line current.

$$120 \text{ amps} \times 1.65 = 198 \text{ amps}$$

$$120 \text{ amps} \times 2.00 = 240 \text{ amps}$$

Suggestions: A60C200-121 or A60C200-121TI

If a Class J or a Class RK1 is to be used, size the fuse at 185% to 220% of line current.

$$120 \text{ amps} \times 1.85 = 222 \text{ amps}$$

$$120 \text{ amps} \times 2.20 = 264 \text{ amps}$$

Suggestions: A4J225 or A6K225R

Example#2: What fuse would you recommend for a three phase capacitor rated 2.4kV, 100kVAR?

$$\text{Calculate Capacitor Current} = \frac{100,000 \text{ volt-amps}}{\sqrt{3} \times 2400\text{V}} = 24\text{A}$$

$$\text{fuse size } 24 \times 1.65 = 39\text{A}$$

$$24 \times 2.00 = 48\text{A}$$

We suggest a 40 or 50 amp fuse rated at least 2400V A250C50-XX, where XX is the type of mounting needed.

Cable Protection

Using Cable Protectors

Cable Protectors are special purpose limiters which are used to protect service entrance and distribution cable runs. The National Electrical Code (NEC) does not require using cable protectors.

When unprotected cables are paralleled, a single conductor faulting to ground can result in damage to and eventual loss of all parallel conductors. The resultant cost of cable replacement, loss of service, and down time can be significant. This cost can be minimized by the use of Cable Protectors.

When each phase consists of three or more parallel conductors, Cable Protectors are installed at each end of each conductor. Should one cable fault, the Cable Protectors at each end of the faulted cable will open and isolate the faulted cable. The unfaulted cables will maintain service.

Terminations

In addition to improving system reliability, Cable Protectors provide a means of terminating cable, thus eliminating the need for cable lugs. Cable Protectors are available with the following configurations:

Aluminum and copper cable require different terminations. Cable Protectors intended for copper cable must not be used with aluminum cable. Cable Protectors intended for aluminum cable include an oxide inhibitor.

Placement of Cable Protectors

In single phase applications where a single transformer supplies the service and there are only one or two conductors per phase, a single Cable Protector per cable may be used. The Cable Protector should be located at the supply end of the cable. In all other applications, Cable Protectors should be placed at both ends of each cable. This allows a faulted cable to be isolated from the source end and from a back feed at its load end. Isolation of a faulted cable is only possible if there are 3 or more parallel cables per phase.

Cable Protector Ampacity

Cable Protectors are not ampere rated. They are not intended to provide overload protection for the cable. Cable Protectors are designed to open in case of a short circuit or after a cable has faulted. Thus total system reliability is maximized. For these reasons Cable Protectors are rated in terms of the cable material (aluminum or copper) and the cable size (250kcmil, 500kcmil, etc.)

Selecting a Cable Protector

The following questions must be answered to choose the correct Cable Protector:

- Is the cable copper or aluminum?
- What is the cable size?
- What termination type is desired?
- Is the Cable Protector to be insulated or protected with a heat-shrink sleeve or a rubber boot?

Once these questions have been answered, the Cable Protector catalog number can be chosen from the listings.

Small Cable Sizes

Class J fuses may be used for cable sizes smaller than 4/0. Since Class J blades are drilled for bolting, they may be attached directly to bus. Cables must be prepared by installing lugs before bolting to the fuse. Cable-to-bus or cable-to-cable terminations are possible. The following ampere ratings are recommended, or each cable size.

Cable - Size Awg CU or AL	Class J Fuse Catalog No.
#4	A4J125
#3	A4J150
#2	A4J175
#1	A4J200
1/0	A4J250
2/0	A4J300
3/0	A4J400

Welder Protection

General

Articles 630-12 and 630-32 of the National Electrical Code requires that electric welders and their supply conductors have overcurrent protection. The Code further requires that each welder have a nameplate which provides information necessary for the selection of the appropriate supply conductors and overcurrent protection devices.

While either circuit breakers or fuses may be used for overcurrent protection, the typically high available fault currents and the need for overall system selective coordination favor the use of current-limiting fuses.

Supply Conductor Protection

For AC transformer, DC rectifier and motor-generator arc welders the supply conductors should be fused at not more than 200% of the conductor ampere rating. For resistance welders the Code allows fusing at up to 300% of conductor ampere rating. In both applications a time delay RK5 fuse such as the Tri-onic® is generally recommended.

Welder Protection

To comply with the Code, AC transformer, DC rectifier and motor-generator arc welders should be fused at not more than 200% of their primary current rating (shown on welder nameplate). Resistance welders should be fused at not more than 300% of their primary current rating. As with supply conductors, RK5 time delay fuses such as the Tri-onic® are recommended. It should be noted that the Code states that a separate overcurrent device is not required for the welder if the supply conductors are protected by an overcurrent device which will satisfy the welder overcurrent protection requirements.

Special Applications

UL class fuses sized according to the Code may not be suitable in some welding applications. High ambient temperatures, high cycle rates and high available fault currents may require the use of Mersen Welder Protectors.

Welder Protectors (A4BX Type 150 or Type 150J) are special purpose limiters which have been designed specifically for welding applications to protect equipment in case of short circuits. They have twice the thermal rating of UL Class fuses yet provide a low clearing I^2t . This combination minimizes fuse fatigue and allows effective coordination with upstream devices. Welder Protectors may be sized closer to welder primary ampere rating than UL Class fuses, hence may allow the use of smaller disconnect switches.

Welder Protectors are intended for short circuit protection and are not intended for overload protection. They should never be used as the only protective device on any welder application. Thermal overload protection must be provided in the welder by some other device.

Motor Starter General Information

Typical Construction Of a Motor Starter

Essential parts of a motor branch circuit required by the National Electrical Code:

- Disconnect means
- Branch-circuit short-circuit protective device
- Motor-controller
- Motor overload protective devices

Disconnect means

The Disconnect means can be a Manual Disconnect Switch according to UL 98.

A manual Motor Controller (according to UL 508) additionally marked "Suitable as Motor Disconnect" is only permitted as a disconnecting means where installed between the final branch-circuit short-circuit and ground-fault protective device and the motor (NEC 2008 Article 430.109).

Branch-circuit short-circuit protective device

The short-circuit protective device can be either a Fuse or an Inverse-time Circuit-breaker.

Motor-controller

Any switch or device that is normally used to start and stop a motor according to the National Electrical Code article 430.82.

Motor overload protective devices

The National Electrical Code permits fuses to be used as the sole means of overload protection for motor branch circuits. This approach is often practical only with small single phase motors. Most integral horsepower 3 phase motors are controlled by a motor starter which includes an overload relay. Since the overload relay provides overload protection for the motor branch circuit, the fuses may be sized for short-circuit protection.

Product Features

of Non-Fusible & Fusible Disconnect Switches

Door Interlock in On Position

The handles allow opening the door in the OFF position only. In the ON position the door can not be opened.

This interlocking can be by-passed by authorized personnel (defeater option on handle) for maintenance, testing or commissioning.

Defeater

The defeat function allows qualified personnel to by-pass the door interlock when the switch is in the ON position by means of a tool.

This exclusive design is also available in a NEMA 4 and 4X rating.

Padlocking

Handles can be padlocked in the OFF position with up to 3 padlocks. Meets OSHA requirement for lockout / tagout.

For safety reasons, the door can not be opened when the handle is padlocked.

Touch Safe

Our design reduces or eliminates the danger of accidental contact with live, energized parts. All products are supplied standard with line side shrouding.

Positive Opening Operation

The positive opening operation feature of our switches means that all the main contacts are ensured to be in the open position when the handle is in the "OFF" position.

New NFPA 79 Requirements and Solutions

As defined in the NFPA 79 Standard section 5.3.3.1 and 6.2.3.2, our disconnecting devices fully comply with all of the following requirements:

1. Isolate the electrical equipment from the supply circuit and have one off (open) and one on (closed) position only.
2. Have an external operating means (e.g., handle).
3. Be provided with a permanent means permitting it to be locked in the off (open) position only (e.g., by padlocks) independent of the door position. When so locked, remote as well as local closing shall be prevented.
4. Be operable, by qualified persons, independent of the door position without the use of accessory tools or devices.

However the closing of the disconnecting means while door is open is not permitted unless an interlock is operated by deliberate action.

Flange and side operation:

Our side operated switches used with flange handles meet the requirements of the NFPA 79 without any additional parts being added.

Product Features

of Non-Fusible & Fusible Disconnect Switches

Welded Contact Protection

Positive opening operation safeguards users in case of welded contacts due to an overload or short-circuit. The handle can not reach the "OFF" position unless the contacts are truly open. According to the IEC 947-3 standard if the contacts are welded due to an overload or short-circuit, the switch will not reach the "OFF" position and can not be padlocked in this position as long as operating force applied to the operating mechanism is less than a force three times the standard operating force. Thus, this unusual operation alerts the user that a problem has occurred.

Contact Principle

Up to 400A

All switches use silver tipped contacts technology providing the following advantages:

- best solution for harsh environments (humidity, sulphide, chloride...),
- high on-load break characteristics,
- longer mechanical and electrical life,
- maintenance free switches without grease.

Above 400A

Our switches use a self-cleaning moving contact technology allowing high short-circuit withstand.

Clear Position Indicator

All switches and handles have clear "ON" and "OFF" designations.

Tailor-Made Solutions

- Multipolar switches (examples: 12-pole 160A switch; 18-pole 30A switch...).
 - Rear connections (top or/and bottom).
 - Mixed pole (example: 3-pole 200A + 2-pole 30A switch...).
- Please consult us.

Fast Make and Break Contacts

All the Non-Fusible and Fusible Disconnect switches' contacts work independently of the speed and force of the operator providing better electrical characteristics (making capacities on short-circuits, highly inductive load operation possibilities).

Product Features of Fusible Disconnect Switches

Exceptional 200kA short-circuit protection with fuses

The Fused Switch line with class CC, J or L fuses provides exceptional high level of short-circuit protection, up to 200kA.

The CC and J fuses are more current limiting than older classes of fuses or circuit breakers. In other words, fuses have higher breaking capacities than most of the circuit breakers. Moreover discrimination (selectivity) and coordination are easily achieved with fuses.

The fuse solution brings the following advantages: high performance, reliability, safety, savings and ease of use.

Practical safeguard

Arc broken into 4

Double break

The modern designed mechanism of our Fusible Disconnect Switches disconnects both sides of the fuses using two double breaking contacts per pole. This ensures the complete isolation of the fuses in the "OFF" position and allows the switch to be fed from either top or bottom side.

This feature allows the switch to operate on highly inductive loads.

Touch safe

Our design reduces or eliminates the danger of accidental contact with live, energized parts.

All switches are supplied standard with fuse cover and line side shrouding.

Panel space saving

This proven switch technology has the fuses incorporated on the top of the switch mechanism to reduce the footprint of the product and save you valuable real estate in your panel.

The space saving can be as much as 50% from the switches designed with use of older fuse classes.

Fast and safe commissioning

The TEST feature enables the testing of the control circuit auxiliaries without switching the main contacts or removing the fuses.

This function provides a serious technical and commercial alternative to a separately wired push button.

Correction Factors

For Non-Fusible & Fusible Disconnect Switches

Correction factors due to ambient air temperature

Method: $I_{thu} \leq I_{th} \times K_t$

ta: ambient temperature

I_{th}: thermal switch current

K_t: correction factor due to ambient temperature **ta**

I_{thu}: maximum thermal current after correction

Auxiliary Contacts

Auxiliary Contact Wiring Diagrams

Auxiliary contact rating codes (according to UL508 standard item 139)

Designation

These codes concern the auxiliary contacts and give the maximum load they can make or break. The numerical suffix designates the maximum voltage design values, which are to be 600, 300 and 150 volts for suffixes 600, 300 and 150 respectively. The table below gives some typical rating codes:

Example

A contactor used at 600VAC - 60 Hz has the following specifications:

Average consumption: - inrush 60 Hz: 1200VA
- sealed 60 Hz: 120VA

Thus a C600 rated auxiliary device is the minimum rating required.

Contact Rating Code Designation	Max Operating Voltage (V)	Network Type	Making Max Load (VA)	Breaking Max Load (VA)
A600	600	AC	7200	720
B600	600	AC	3600	360
C600	600	AC	1800	180
D300	300	AC	432	72
E150	150	AC	216	36
N600	600	DC	275	275
P600	600	DC	138	138
Q600	600	DC	69	69
R300	300	DC	28	28

Note: A600 and N600 are the highest categories and may be used to cover all cases.

NEMA Ratings & IP Cross-Reference

This table provides a guide for converting from NEMA Enclosure Type Numbers to IP Ratings. The NEMA Types meet or exceed the test requirements for the associated European Classifications; for this reason the table should not be used to convert “from IP Rating to NEMA” and the “NEMA to IP Rating” should be verified by test.

NEMA Type	Intended Use and Description	NEMA Ratings and IP Cross-Reference
1	Indoor use primarily to provide a degree of protection against contact with the enclosed equipment and against a limited amount of falling dirt.	NEMA 1 meets or exceeds IP10
2	Indoor use to provide a degree of protection against a limited amount of falling water and dirt.	NEMA 2 meets or exceeds IP11
3	Intended for outdoor use primarily to provide a degree of protection against rain, sleet, windblown dust, and damage from external ice formation.	NEMA 3 meets or exceeds IP54
3R	Intended for outdoor use primarily to provide a degree of protection against rain, sleet, and damage from external ice formation.	NEMA 3R meets or exceeds IP14
3S	Intended for outdoor use primarily to provide a degree of protection against rain, sleet, windblown dust, and to provide for operation of external mechanisms when ice laden.	NEMA 3S meets or exceeds IP54
4	Intended for indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, hose-directed water, and damage from external ice formation.	NEMA 4 meets or exceeds IP56
4X	Intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, hose-directed water, and damage from ice formation.	NEMA 4X meets or exceeds IP56
6	Intended for indoor or outdoor use primarily to provide a degree of protection against hose-directed water, the entry of water during occasional temporary submersion at a limited depth, and damage from external ice formation.	NEMA 6 meets or exceeds IP67
6P	Intended for indoor or outdoor use primarily to provide a degree of protection against hose-directed water, the entry of water during prolonged submersion at a limited depth, and damage from external ice formation.	NEMA 6P meets or exceeds IP67
12	Intended for indoor use primarily to provide a degree of protection against circulating dust, falling dirt, and dripping non-corrosive liquids.	NEMA 12 meets or exceeds IP52
12K	Type 12 with knockouts.	NEMA 12K meets or exceeds IP52

Degrees of Protection

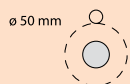

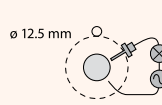

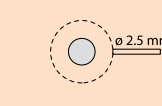

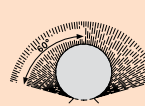

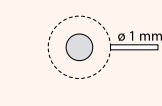

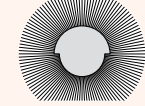

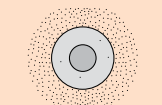

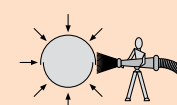

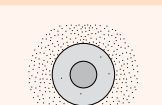

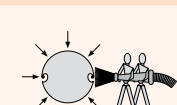

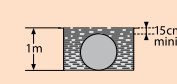

(IP Codes According to IEC 60529 Standard)

The degrees of protection are defined by two numbers and sometimes by an additional letter.

For example: IP 55 or IP xx B (x indicates: any value).

The numbers and additional letters are defined below:

First Number Protection Against Solid Body Penetration			Second Number Protection Against Liquid Penetration			Additional Letter ⁽²⁾	Degree of Protection Brief Description
IP	Tests		IP	Tests			
0		No protection	0		No protection		
1		Protected against solid bodies greater than 50 mm	1		Protected against water drops falling vertically (condensation)	A	Protected against access with back of hand
2 ⁽¹⁾		Protected against solid bodies greater than 12 mm	2		Protected against water drops falling up to 15° from the vertical	B	Protected against access with finger
3		Protected against solid bodies greater than 2.5 mm	3		Protected against water showers up to 60° from the vertical	C	Protected against access with tool
4		Protected against solid bodies greater than 1 mm	4		Protected against water splashes from any direction	D	Protected against access with wire
5		Protected against dust (excluding damaging deposits)	5		Protected against water jets from any hosed direction		
6		Total protection against dust	6		Protected against water splashes comparable to heavy seas		
			7		Protected against total immersion		

Note:

(1) This is established by 2 tests:

- non penetration of a sphere with the diameter of 12.5 mm
- non accessibility of a test probe with a diameter of 12 mm.

(2) This additional letter only defines the access to dangerous components

Example: A device has an aperture allowing access with a finger. This will not be classified as IP 2x. However, if the components which are accessible with a finger are not dangerous (electric shock, burns, etc.), the device will be classified as xx B.

IEC 947-1 & IEC 947-3 Standards

Selecting Switches According to IEC 947 -3 Standard

Utilization category		Use	Application
AC	DC		
AC20	DC20	No-load making and breaking	Disconnecter (device without on-load making and breaking capacity)
AC21	DC21	Resistive including moderate overloads	Switches at installation head or for resistive circuits (heating, lighting, except discharge lamps, etc.)
AC22	DC22	Inductive and resistive mixed loads including moderate overloads	Switches in secondary circuits or reactive circuits (capacitor banks, discharge lamps, shunt motors, etc.)
AC23	DC23	Loads made of motor or other highly inductive loads	Switches feeding one or several motors or inductive circuits (electric carriers, brake magnet, series motor, etc.)

Breaking and Making Capacities

Unlike circuit breakers, where these criteria indicate tripping or short-circuit making characteristics and perhaps requiring device replacement, switch making and breaking capacities correspond to utilization category maximum performance values. In these uses, the switch must still maintain its characteristics, in particular its resistance to leakage current and temperature rise.

	Making		Breaking		N° of operating cycles
	I/le	cos φ	I/le	cos φ	
AC 21	1.5	0.95	1.5	0.95	5
AC 22	3	0.65	3	0.65	5
AC 23 I ≤ 100 A	10	0.45	8	0.45	5
AC 23 Ie > 100 A	10	0.35	8	0.35	3

	L/R (ms)		L/R (ms)	
DC 21	1.5	1	1.5	1
DC 22	4	2.5	4	2.5
DC 23	4	15	4	15

Making and breaking capacities.

Short Circuit Characteristics

- Short-time withstand current (I_{cw}): allowable rms current for 1 second.
- Short circuit making capacity (I_{cm}): peak current value which the device can withstand when closed on a short-circuit.
- Conditional short circuit current: the rms current the switch can withstand when associated with a protection device limiting both the current and short circuit duration.
- Dynamic withstand: peak current the device can withstand in a closed position.

The characteristic established by this standard is the short-time withstand current (I_{cw}) from which minimal dynamic withstand is deduced. This essential withstand value corresponds to what the switch can stand without welding.

Electrical and Mechanical Endurance

This standard establishes the minimum number of electrical (full load) and mechanical (no-load) operating cycles that must be performed by devices. These characteristics also specify the device's theoretical lifespan during which it must maintain its characteristics, particularly resistance to leakage current and temperature rise.

This performance is linked to the device's use and rating. According to anticipated use, two additional application categories are offered:

- Category A: frequent operations (in close proximity to the load),
- Category B: infrequent operations (at installation head or wiring system).

Ie (A)	≤ 100	≤ 315	≤ 630	≤ 2500	> 2500
N° cycles/hour	120	120	60	20	10
N° of operations in cat. A					
without current	8500	7000	4000	2500	1500
with current	1500	1000	1000	500	500
Total	10000	8000	5000	3000	2000
N° of operations in cat. B					
without current	1700	1400	800	500	300
with current	300	200	200	100	100
Total	2000	1600	1000	600	400

Definitions

Conventional thermal current (I_{th}): Value of the current the disconnect switch can withstand with pole in closed position, in free air for an eight hour duty, without the temperature rise of its various parts exceeding the limits specified by the standards.

Rated insulation voltage (U_i): Voltage value which designates the unit and to which dielectric tests, clearance and creepage distances are referred.

Rated impulse withstand voltage (U_{imp}): Peak value of an impulse voltage of prescribed form and polarity which the equipment is capable of withstanding without failure under specified conditions of test and to which the values of the clearances are referred.

Rated operating current (I_e): Current value determined by endurance tests (both mechanical and electrical) and by making and breaking capacity tests.

Fusible Shunt Trip Switch

Fusible Shunt Trip Switch for use in fire safety and elevator control

Applicable Codes and Standards:

- NFPA 13, 8.14.5
- NFPA 72 6.15.4.4
- ANSI/ASME A17.1
- NEC 620.91

Mersen's Fusible Shunt Trip Switch is an all-in-one solution that meets many different code requirements with the protection and safety in elevator shafts. According to NFPA 13, 8.14.5, sprinkler protection is required at the top and bottom of elevator shafts. With that being said, NFPA 13 requires the installation of sprinklers in the elevator machine room. Once a sprinkler system has been introduced to either the elevator shaft or elevator machine room, you are now installing these per the State-Adopted Elevator Code ANSI/ASME A17.1.

To summarize ASME A17.1, Safety Code for Elevators and Escalators, Rule 102.2 (c) (3) requires the shutdown of power to the elevator prior to the application of water in the elevator machine room and or hoistway.

The shutdown of power is accomplished by a shunt trip device in the elevator circuit. This reduces the risk of any potential electrical shock once the water is released into the system. This will also reduce the risk of any elevator car slippage once the cables and hoist system become saturated from the release of water. In addition to turning off the power, 2002 NFPA 72 6.15.4.4 (Fire Alarm Code) requires:

“Control circuits to shut down elevator power shall be monitored for the presence of operating voltage. Loss of voltage to the control circuit for the disconnecting means shall cause a supervisory signal to be indicated at the control unit and required remote annunciation.”

This is achieved with the Fire Monitoring Relay (FR Relay), a standard feature in Mersen's Fusible Shunt Trip Device.

In the event of a power loss, at which point a back up power supply is introduced to the system, you are now required to meet NEC Article 620.91 paragraph (C) emergency or standby power system. This is accomplished with a set of mechanical interlock auxiliary contacts which comes standard as 1-N/O and 1-N/C contact. The auxiliary contacts prevent the elevator from descending down and injuring any workers that could be working in the elevator shaft. This also allows the elevator to move to the next convenient location and open the doors to let any passengers out in the event of an emergency.

Selectivity Between 240, 480, or 600V Main and Branch Fuses

Definition

Coordination is defined as properly localizing a fault condition to restrict outages to the equipment affected, accomplished by choice of selective fault protective devices.

Coordination (selectivity, discrimination) is desirable and often times mandatory. A lack of coordination can represent a hazard to people and equipment. When designing for coordination, fuses provide distinct advantages over other types of overcurrent protective devices.

To coordinate a circuit breaker protected system, it is generally necessary to intentionally delay the short circuit response of upstream breakers. Though coordination may be achieved, short circuit protection is compromised. The speed and consistency of response of fuses allows coordination without compromising component protection.

The terms coordination and selectivity are often used interchangeably. The term coordination should be used to describe a system as defined above, while two fuses are said to be selective if the downstream fuse opens while the

upstream fuse remains operable under ALL conditions of overcurrent. The term “discrimination” is synonymous with selectivity and is the preferred international term for this definition.

The word ALL is key. Fuse selectivity cannot be assured by comparing fuse time current curves alone. These curves stop at .01 second. Fuse performance under high fault conditions must also be evaluated. Fuse I^2t is the best tool for assuring coordination under high fault current conditions. If the total clearing I^2t of the downstream fuse is less than the melting I^2t of the main upstream fuse, the fuses will be selective under high fault conditions.

To simplify presenting weighty I^2t data, selectivity information can simply be found in selectivity ratio tables.

The ratios found in the following tables are conservative and are appropriate for all overcurrents up to 200,000 amperes RMS. In some cases smaller ratios than shown may be used. Consult your Mersen representative for specific recommendations.

Fuse Selectivity Ratios - 600 and 480 Volt Applications Up to 200,000 RMS Symmetrical Amperes

Branch Fuse	Ratio (For Fuses Rated 61 – 6000A)								
	Main Fuse

**Exception: For AJT450-600 use 2:1 on 480V only, 2.25:1 on 600V.

Short Circuit Calculations Quick Three Phase

Short circuit current levels must be known before fuses or other equipment can be correctly applied. For fuses, unlike circuit breakers, there are four levels of interest. These are 10,000, 50,000, 100,000 and 200,000 RMS symmetrical amperes.

Rigorous determination of short circuit currents requires accurate reactance and resistance data for each power component from the utility generating station down to the point of the fault. It is time-consuming for a plant engineer to collect all this information and yet he is the one most affected by short circuit hazards.

There have been several approaches to "easy" short circuit calculations which have been cumbersome to be of practical use. The method described here is not new but it is the simplest of all approaches.

Example 1:

What is the potential short circuit current at various points in a 480V, 3-phase system fed by a 1000kVA, 5.75%Z transformer? (Assume primary short circuit power to be 500MVA.)

In summary, each basic component of the industrial electrical distribution system is pre-assigned a single factor based on the impedance it adds to the system. For instance, a 1000kVA, 480 volt, 5.75%Z transformer has a factor of 4.80 obtained from Table A. This factor corresponds with 25,000 RMS short circuit amperes (directly read on Scale 1, pg 55). Note: Factors change proportionally with transformer impedance. If this transformer were 5.00%Z, the factor would be $5.00/5.75 \times 4.80 = 4.17$.

Cable and bus factors are based on 100 foot lengths. Shorter or longer lengths have proportionately smaller or larger factors (i.e. 50' length = 1/2 factor; 200' length = 2 x factor). Basic component factors are listed on following pages in tables A through D.

To find the short circuit current at any point in the system, simply add the factors as they appear in the system from service entrance to fault point and read the available current on Scale 1.

Example 2:

If the primary short circuit power were 50MVA (instead of 500MVA) in this same system, what would Isc be at the transformer? At the end of the bus duct run?

Answer:

From the Primary MVA correction factor table A1, the factor for 50MVA (at 480V) is 1.74. The new factor at the transformer is then $4.80 + 1.74 = 6.54$ and Isc is reduced to 18,000A (Scale 1). The new factor at the bus duct is $9.21 + 1.74 = 10.95$ Isc = 11,000A (Scale 1).

Short Circuit Calculations Quick Three Phase

Component factor tables- transformers

The transformer factors are based on available primary short circuit power of 500MVA and listed in Table A. For systems with other than 500MVA primary short circuit power, add the appropriate correction factors from Table A1 to the transformer factor found in Table A.

A- Three Phase Transformer Factors

Transformer		Factor			
kVA	%Z	3 Phase Voltage			
		208	240	480	600
75	1.60	9.00	10.00	20.00	24.00
100	1.70	7.00	8.00	16.00	20.00
112.5	2.00	7.40	8.50	17.00	21.00
150	2.00	5.40	6.00	12.00	15.00
225	2.00	3.70	4.00	8.00	10.00
300	2.00	2.70	3.00	6.00	7.50
500	2.50	2.15	2.25	4.50	5.60
750	5.75	2.78	3.25	6.50	8.00
1000	5.75	2.24	2.40	4.80	6.00
1500	5.75	1.48	1.60	3.20	4.00
2000	5.75	NA	1.20	2.40	3.00
2500	5.75	NA	.95	1.91	2.40

Notes: 208 volt 3φ transformer factors are calculated for 50% motor load. 240, 480 and 600 volt 3φ transformer factors are calculated for 100% motor load. A phase-to-phase fault is .866 times the calculated 3-phase value.

A1- Transformer Correction Factors

Primary MVA	Factor			
	3 Phase Voltage			
	208	240	480	600
15	2.82	3.24	6.43	8.05
25	1.65	1.90	3.78	4.73
50	.78	.90	1.74	2.24
100	.34	.40	.80	1.00
150	.20	.23	.46	.58
250	.08	.10	.20	.25
Infinite	-.08	-.10	-.20	-.25

A2- Factor for Second Three Phase Transformer in System

1. Determine system factor at the second transformer primary.

Example:

Isc @ 480V = 40,000A. Factor is 3.00 (from Scale 1).

2. Adjust factor in proportion to voltage ratio of second transformer.

Example:

For 208V, factor changes to $(208 \div 480) \times 3.00 = 1.30$

3. Add factor for second 3φ transformer.

Example:

Factor for 100kVA, 208V, 1.70%Z transformer is 7.00.

Total Factor = 7.00 + 1.30 = 8.30

(Isc = 14,500A)

3φ to 3φ

Short Circuit Calculations Quick Three Phase

A3- Factors for Single Phase Transformer in Three Phase System

Transformer connections must be known before factor can be determined. See Figures A and B (bottom right).

1. Determine system factor at 1 ϕ transformer primary, with 480V pri., 120/240V sec. (Figure A)

Example:

Isc @480V = 40,000A, 3 ϕ . Factor is 3.00 (from Scale 1).

$$1\phi \text{ factor} = \frac{3\phi \text{ factor}}{.866} = \frac{3.00}{.866} = 3.46$$

2. Adjust factor in proportion to voltage ratio of 480/240V transformer.

Example:

For 240V, 1 ϕ factor is (240 \div 480) 3.46 = 1.73

3. Add factor for 1 ϕ transformer with Figure A connection.

Example:

Factor for 100kVA, 120/240V, 3%Z transformer is:

- a. 120V--total factor = 6.22 + 1.73 = 7.95
(Isc = 15,000A)
- b. 240V--total factor = 8.64 + 1.73 = 10.37
(Isc = 11,600A)

A3- Single Phase Transformer Factors

Transformer		Factor 1 Phase Voltage		
kVA	%Z	120V FIG. A	240V FIG. A	120V FIG. B
15	2.5	34.6	48.0	24.0
25	2.5	20.7	28.8	14.4
37.5	2.8	16.6	23.0	11.5
50	3.0	12.5	17.3	8.65
75	3.0	8.28	11.5	5.75
100	3.0	6.22	8.64	4.32
150	2.5	3.46	4.80	2.40
167	2.5	3.10	4.31	2.16
225	2.5	2.30	3.20	1.60
300	3.0	2.07	2.88	1.44
500	4.5	1.86	2.59	1.30

Note: Factor varies with %Z.

Example: 50kVA, 240V secondary with a 1.5%Z has a factor of (1.5%Z \div 3.0%Z) x 17.3 = 8.65

3 ϕ to 1 ϕ

Short Circuit Current

SCALE 1

Short Circuit Calculations Quick Three Phase

How Many Fuses Will Open On a Short Circuit?

In a three phase system typically only two fuses will open on a line-to-line short circuit. Since all three line currents are offset from each other (see chart to the right), each fuse will see the full fault at different times. Therefore the fuses will open at different times, once the first two fuses open, the circuit is disconnected and the third one typically never sees the full fault current. The third line can only conduct current directly to ground.

How many fuses will open on an overload?

Similar to a short circuit typically two fuses will open on an overload. Typically, one fuse opening will not be adequate to disconnect all three phases so the two remaining phases will conduct the overcurrent until one of them opens. At this point, the last fuse will only be able to conduct current directly to ground so it most likely will not open.

Is it ok to replace only the open fuses?

It is always recommended to replace all three fuses. In both short circuit and overload conditions the third fuse might not open but there is no way to tell how much of the element may have melted due to the overcurrent. Not replacing the third fuse can lead to issues in the future such as nuisance openings which can result in costly downtime.

Is there a life expectancy on my fuse?

A fuse does not have a "mean time between failures" because theoretically a fuse only needs to be replaced once it opens on an overcurrent. Fuses are 100% tested before leaving the factory to ensure that they will perform as intended. In the real world, factors such as temperature and humidity can cause a fuse to need replacement. Mersen suggests using ten years as a guideline for replacing both fuses installed and in inventory.

Fuses are 100% tested before leaving the factory to ensure they will perform as intended.

Short Circuit Rating (SCCR)

The National Electric Code (2008) defines Short-Circuit Current Rating (article 100) as “the prospective symmetrical fault current at a normal voltage to which an apparatus or system is able to be connected without sustaining damage exceeding defined acceptance criteria.” SCCR is important to provide for safety of people and equipment during short-circuit conditions.

Article 409.110 (3) states that industrial control panels shall be marked with “short-circuit current rating of the industrial control panel based on one of the following: (a) short-circuit current rating of a listed and labeled assembly (b) short-circuit current rating established utilizing an approved method.” The fine print note refers to UL 508A, supplement SB as an example of an approved method. 430.8 require motor controllers to be marked with an SCCR.

Supplement SB in UL 508A uses a four step process to determine what a short circuit current rating for a panel should be. This process identifies the components with the lowest individual SCCR in the circuit. If there is no feeder over-current protective device (OCPD) this component is the weakest link and would determine the overall SCCR of the panel. Typically the feeder circuit will have an OCPD and we must consider its current-limiting effects on the circuit.

The feeder OCPD may limit fault currents enough so that the weakest link components are protected and the panel can have a higher overall SCCR. For more information please contact Mersen Technical Services at 978-462-6662 or technicalservices.nby@mersen.com.

11 Reasons For Using Current-Limiting Fuses:

Arc Flash Reduction

Current limiting fuses, when applied within their current limiting range, reduce personnel exposure to incident arc flash energy. Non fused systems may need extensive re-engineering to reduce arc flash hazards, and improve personnel safety.

Safety

Overcurrent protective devices which operate are often reset without first investigating to find the cause of opening. Electromechanical devices which have opened high level faults may not have the reserve capacity to open a 2nd or 3rd fault safely. When a fuse opens it is replaced with a new fuse, thus protection is not degraded by previous faults.

Reliability

No moving parts to wear or become contaminated by dust, oil or corrosion.

Long Life

The speed of response of a fuse will not change or slow down as the fuse ages. In other words, the fuse’s ability to provide protection is not adversely affected by the passage of time.

Minimal Maintenance

Fuses do not require periodic recalibration as do electromechanical overcurrent protective devices.

Component Protection

The current limiting action of a fuse minimizes or eliminates component damage.

North American Standards

Tri-national Standards specify fuse performance and maximum allowable fuse I_p and I^2t let-thru values.

Selectivity

Fuses may be easily coordinated to provide selectivity under both overload and short circuit conditions.

High Interrupting Rating

You don’t pay a premium for high interrupting capacity. Most low voltage current limiting fuses have a 200,000 ampere interrupting rating.

Cost Effective

Fuses are generally the most cost effective means of providing overcurrent protection. This is especially true where high fault currents exist or where small components need protection.

Extended Protection

Devices with low interrupting ratings are often rendered obsolete by service upgrades or increases in available fault current. Non-fused systems may need expensive system upgrades to maintain system safety.

Application Information

Three Clues for Detecting When is a Fuse Too Old for Storeroom Inventory?

Storeroom managers often have the responsibility for identifying obsolete inventory. There are advantages to having the right inventory for needs, without the clutter of fuses that should never be used. Obsolete fuses can mask stock-out of important spare fuses resulting in needless emergencies. Sometimes, an electrician will mistakenly use an obsolete fuse and create a dangerous safety condition.

What conditions would make a fuse obsolete? There is functional obsolescence, concealed damage obsolescence, and age obsolescence. Any of these conditions justify discarding a fuse. The electrical safety experts at Mersen offer the following three clues for determining when a fuse should be removed from storeroom inventory:

1. Functional Obsolescence

Functional obsolescence occurs when the fuse can't protect the equipment due to changes in the electrical system, or when the end-use equipment needing this particular fuse has been abandoned. Either way, the fuse will not help in restoring the equipment to service. If it's accidentally used by an electrician, it could create a hazardous situation.

An example of a functionally obsolete fuse is a One-Time with a safety rating of only 10kA IR. When the fuse was originally purchased, it could have had an adequate safety rating. Now the electrical system has changed and requires a safety rating of more than 10kA. If the fuse is installed without adequate IR as required by OSHA, it could explode or cause personal injury.

2. Concealed Damage

Obsolescence can be caused by concealed damage. An electrician normally only checks for fuse continuity to determine its suitability for continued service. But other concealed damage can occur in storage. The biggest threat to fuses in storage is moisture.

Once fuses absorb too much moisture, they lose their interrupting (safety) capacity. Even if they are dried out after the exposure, they are permanently damaged. In normal use they generate enough heat to keep themselves safe from absorbing moisture, but not in storage. The absorption of moisture permanently changes the structure of the filler packing around the fuse link and consequently decreases the safety capacity.

A common check for water damage is to check for wrinkling on the fuse's paper label. If the paper label is wrinkled, it indicates excessive moisture during storage. Also, any water stains on the fuse body or corrosion on the ends can indicate moisture damage.

Other concealed damage can occur when a fuse is used and returned to the storeroom. Any fuse that show scratches on the blades or ferrules was probably inserted into fuse clips and returned to inventory.

3. Fuses Over 10 Years Old

When fuses are more than 10 years old, the history of these fuses is uncertain. More than likely, they were exposed to moisture or damaging conditions sometime during the 10 years of storage. This would make them unsafe and unreliable for maintenance. Most manufacturers mark a date code on their fuses.

Summary

If storeroom fuses exhibit functional obsolescence, signs of moisture damage, or are more than 10 years old, they should be replaced. For a free fuse audit and inventory analysis, visit call 978-462-6662.

*A Time Delay Fuse

+ Blue Label Fuses Only

Since all of the above fuses meet the “non-indicating, filled, current-limiting” specifications, they are suitable for use in standard enclosures for Class 1 Division 2 applications.

Application Information

Suggested Fuse Specifications

1.0 General

The electrical contractor shall furnish and install a complete set of fuses for all fusible equipment on the job as specified by the electrical drawings. Final tests and inspections shall be made prior to energizing the equipment. This shall include tightening all electrical connections and inspecting all ground conductors. Fuses shall be as follows:

2.0 Mains, Feeders and Branch Circuits

A. Circuits 601 to 6000 amperes shall be protected by current-limiting Mersen Amp-Trap 2000® Class L time-delay A4BQ fuses. Fuses shall be time-delay and shall hold 500% of rated current for a minimum of 4 seconds, clear 20 times rated current in .01 second or less and be UL Listed and CSA Certified with an interrupting rating of 200,000 amperes rms symmetrical.

B. Circuits 600 amperes or less shall be protected by current-limiting Mersen Amp-Trap 2000® Class RK1 time-delay A2D (250V) or A6D (600V) or Class J time-delay AJT fuses. Fuses shall hold 500% of rated current for a minimum of 10 seconds (30A, 250V Class RK1 case size shall be a minimum of 8 seconds) and shall be UL Listed and CSA Certified with an interrupting rating of 200,000 amperes rms symmetrical.

C. Motor Protection

All individual motor circuits shall be protected by Mersen Amp-Trap 2000® Class RK1, Class J or Class L time-delay fuses as follows:

Circuits up to 480A: Class RK1 - A2D (250V) or
 A6D(600V)
 Class J - AJT

Circuits over 480A: Class L - A4BQ

Fuse sizes for motor protection shall be chosen from tables published by Mersen for the appropriate motor rating. Heavy load and maximum fuse ratings are also shown for applications where typical ratings are not sufficient for the starting current of the motor.

D. Motor Controllers

Motor controllers shall be protected from short circuits by Mersen Amp-Trap 2000® time-delay fuses. For Type 2 protection of motor controllers, fuses shall be chosen in accordance with motor control manufacturers' published recommendations, based on Type 2 test results. The fuses shall be Class RK1 A2D (250V) or A6D (600V) or Class J AJT or Class CC ATDR (600V).

E. Circuit breakers and circuit breaker panels shall be protected by Mersen Amp-Trap 2000® fuses Class RK1 (A2D or A6D), Class J (AJT) or Class L (A4BQ) chosen in accordance with tested UL Series-connected combinations published in the current yellow UL Recognized Component Director.

F. Supplementary lighting and control circuits in the connected combinations shown up to 600VAC and 24 amps shall be protected by Mersen Amp-Trap 2000® Class CC time-delay ATQR or ATDR fuses, sized according to the fixture manufacturers recommendations.

3.0 Spares

Spare fuses amounting to 10% (minimum three) of each type and rating shall be supplied by the electrical contractor. These shall be turned over to the owner upon project completion. Fuses shall be contained and cataloged within the appropriate number of spare fuse cabinets (no less than one). Spare fuse cabinets shall be equipped with a key lock handle, be dedicated for storage of spare fuses and shall be GSFC, as supplied by Mersen.

4.0 Execution

A. Fuses shall not be installed until equipment is to be energized. All fuses shall be of the same manufacturer to assure selective coordination.

B. As-installed drawings shall be submitted to the engineer after completion of the job.

C. All fusible equipment rated 600 amperes or less shall be equipped with fuse clips to accept Class RK1 or Class J fuses as noted in the specifications.

5.0 Substitution

Fuse sizes and types indicated on drawings are based on Mersen Amp-Trap 2000® fuse current-limiting performance and selectivity ratios. Alternative submittals to furnish materials other than those specified, shall be submitted to the engineer in writing two weeks prior to bid date, along with a short circuit and selective coordination study.

Resources & Tools

Strapped for time? Try some of these time-saving resources to enhance your electrical safety initiatives.

Your problem:

Thanks to downsizing, restructuring, and other cost-saving initiatives, your facility is running lean and mean. You have to do much more with a lot less.

And, you have to figure out how to do it safely and effectively.

Our solution: Our goal is to offer the right solution for the right application or business challenge. Need a quick, effective tool that will help you find the best heatsink to fit your space? Try our R-Tools® 3D Heatsink Thermal Modeling. Need to specify the right fuse fast? Explore our Select-A-Fuse® Software. Want a sure fire way to 5S your fuse maintenance program and reduce your inventory by 25% or more, then explore our innovative Fuse Control™ program. We have these and many other timesaving resources.

Want more information fast? If you want more in depth information on these resources & tools, visit our website at ep.mersen.com, or call Technical Service Support at 978-465-4853.

Arc Flash Info Center™

Learning about arc flash makes you an even more valued resource.

Arc flash is a daily threat to your customers. It can blind, burn, or even kill in

an instant, and there's no one, sure protection. But there is an excellent defense: knowledge. The more you know about how arc flash occurs, the better you can help your customers stay safe, protect their equipment, and comply with OSHA requirements.

A lot has been written about arc flash—a simple Internet search alone finds more than 3 million references. But you don't need to search website after website for the accurate, up-to-date information you need to protect your workers. Just visit the Arc Flash Info Center.

Developed by Mersen, the Arc Flash Info Center is your online guide to understanding arc flash requirements and improving plant safety. From a startling look at an arc blast to explanations of current-limitation and hazard analysis to an interactive Arc Flash calculator, it gives you an up-close view of this vital topic.

We've been heavily involved in arc flash research and testing for many years, amassing a valuable base of information that's available to you—free. You'll learn how arc flash protection is the sum of many factors: routine electrical safety analysis, staff training, appropriate circuit protection devices, and the right personal protective equipment (PPE). Considering how your customers' safety can go up in a flash, that's valuable information to share. Find out more about arc flash and the products that can mitigate it by visit the Arc Flash Info Center.

Here's what you'll discover on the Arc Flash Info Center:

Electrical Services

Mersen has built a reputation for providing innovative electrical protection products that meet NEC, UL, CSA, IEC, ANSI/IEEE, CE, NFPA, and other critical safety standards. In fact, many of our respected field engineers serve on leading electrical safety codes and standards committees.

Today, Mersen brings its highly regarded electrical protection expertise to you through our new suite of Electrical Services. Discover why more Safety Managers, Facility Engineers and Maintenance Supervisors turn to Mersen to help them put electrical safety to work for their companies. We offer:

Electrical Safety Project Management

Mersen can coordinate some or all of the electrical safety requirements for a facility. This may include initial assessment through program development, implementation or training. Or you may choose this service on a project basis for assistance with arc flash analysis, integrating the latest NFPA 70E requirements, development of Request for Quote (RFQ) packages for Arc Flash studies, and more.

Arc Flash Hazard Analysis

Turn to our experienced team of electrical safety engineers to analyze your electrical system's exposure to arc flash and other electrical hazards in accordance with NFPA 70E and OSHA. A standard analysis includes: arc flash, shock and other hazards assessment, arc flash incident energy calculations, arc flash protection boundary calculations, determining hazard risk categories, required PPE, and recommended warning labels for electrical equipment.

One-Line Drawings

The foundation of a strong electrical safety program is built upon one-line electrical drawings that are current and accurately represent the facility's electrical system with all of the electrical components, power sources, and electrical equipment located and clearly identified.

Short Circuit Analysis & Coordination Studies

Mersen's seasoned electrical safety experts are available to provide analysis of short circuit current faults, identify electrical equipment deficiencies and inappropriately sized components, conduct circuit protection coordination studies, and pin-point potential short circuit current rating (SCCR) issues.

Field Inspection and Data Collection Supervision

Electrical engineers are available to perform field inspections in order to help ensure your facility is compliant with today's electrical codes. Our team is also on hand to supervise data collection and input to ensure the accuracy of arc flash calculations.

Hazard Labeling

After we complete your arc flash energy calculations, Mersen helps you satisfy the NEC 110.16 code and NFPA 70E standards requiring Arc Flash Warning Labels on all equipment that could be energized while being worked on.

Electrical Safety Program Audit

Mersen is available to provide an objective review of your facility's electrical hazards and safety manual for NFPA 70E and OSHA compliance in a confidential audit process.

Product Analysis & High Power Testing

Turn to Mersen to help with forensic analysis of electrical products. We can help identify fault levels, durations, temperatures and target the reason why the products operated.

Electrical Services Seminars & Training

The standard electrical training programs we can bring your facility.

Introduction to Arc Flash Hazards – This is a 2, 4, or 6-hour seminar ranging from an overview to a thorough session. The objective is to present an overview of 70E and to explain selected OSHA and 70E requirements relevant to arc-flash and fusible protection. This seminar also discusses real world examples.

Arc Flash Safety for Equipment Installers – This 6-hour seminar presents an overview of 70E requirements relevant to arc flash for individuals that will be working within their customers' facilities. The NFPA Electrical Program Safety Book is discussed in reference to different facility safety programs. This gives a basic understanding of arc flash hazards and the value of safety programs. Relevant laws, codes and standards are discussed.

General Electrical Safety for Shock, Arc Flash, and Arc Blast – This 6-hour seminar combines arc flash safety with shock hazard safety for a full understanding of electrical safety. It begins with laws, codes, and standards, then progresses to a detailed explanation of the hazards, and ends with PPE and test equipment.

Complete Arc Flash Safety – This is a two or three day seminar. It introduces OSHA, key national standards, and standards development organizations. The seminar gives understanding of electrical hazards, proper work practices, and related grounding considerations. It also reviews how PPE and ground fault items can increase safety.

2008 National Electrical Code Over-Current Protection Updates – This 4-hour seminar reviews the most important code changes pertaining to overcurrent and overvoltage protection. These topics include Short Circuit Current Ratings (SCCR), interaction with UL 508A, safety labeling requirements, surge suppressors, selective coordination requirements, and other changes affecting overcurrent ratings of equipment.

Short Circuit Current Rating (SCCR) calculations for Panel Builders –

This 4-hour program explains to panel builders the whys of SCCR requirements. It includes examples of calculating SCCR in accordance with UL 508A and typical solutions to upgrading panel SCCR ratings.

Use of Power Distribution Fuses for 600 Volts and Below – This 4-hour seminar is intended to teach the fundamentals of selecting fuses for power distribution applications including motors and transformers 600 volts and less. It covers normal applications, UL fuse types, and gives an appreciation of the strengths and limitations of fuses.

Basics of Selective Coordination – This 4-hour program explains the National Electrical Code requirements for selective coordination. It gives the student a conceptual understanding of selective coordination. It reviews some examples using time current curves with circuit breakers and fuses for NEC compliance.

Customized Electrical Training Services – Combinations of standard courses can be customized for your individual facility, equipment, and procedures. Some of the more common requests are below:

Industrial Electricity: Basics and Troubleshooting – 3 days

National Electrical Code Basics – 3 days

Grounding and Bonding – 2 days

Hazardous Locations – 3 days

Industrial High voltage Safety – 2 days

Fuse Control™ Program

Mersen's Fuse Control™ program is a powerful combination of circuit protection products and services designed to help you get control of your facility's inventory, operating costs, code compliance and workplace safety.

Developed by Mersen and refined through extensive field research, Fuse Control is a simple program that packs a lot of power. It will give you the edge you need to mitigate arc flash hazards, achieve code compliance, reduce inventory by 25% or more — and offer the highest grade overcurrent protection available. Get Fuse Control and enjoy these five benefits:

- Improved workplace safety
- Easier electrical code compliance
- Reduced downtime associated with electrical failures
- Streamline inventory - as much as 25% or more
- Run Leaner and decrease operating costs

How can one program deliver such benefits?

It's easy! Let the fuses do the work. The key lies in consolidating your current inventory and installed overcurrent protective devices into one fuse line - Mersen's innovative current-limiting, arc flash mitigating, Amp-Trap 2000® fuse family.

Order Fuse Control and receive a FREE Fuse Inventory Audit & Analysis

Take action today to get control of your inventory, contact a Mersen Sales Representative to initiate your Fuse Control program today. The initial storeroom audit and database analysis is very simple and will take up little of your time or resources. Also, did we mention it is free!

Ask your Sales Representative about the Mersen Fuse Control program today.

High Power Test Lab

Our focus on efficiency makes the Mersen test facilities extremely productive and affordable for all your testing needs. Our customers turn to us to avoid the inconveniences of long lead-times for test dates, and to gain the advantages of rapid setup and change over times (e.g., circuit-switching in five minutes vs. one hr.) allowing us to provide you more “shots” per day. We appreciate that our customers expect flexibility, and we make every effort to accommodate their unique testing requirements.

Mersen offers our customers global test capabilities for testing products in North America (Newburyport, MA) or in Europe (Saint Bonnet, France). Our labs are ready and able to meet all your test requirements from UL or CSA approval testing in North America to IEC testing in Europe.

This is why innovative and successful companies who manufacture equipment like AC and DC drives, soft starters, UPSs, lighting controls, circuit breakers, MCC, industrial controls, cables, surge suppression devices and many other electrical products select Mersen and our global test capabilities as their partner when it comes to critical design and approval testing. They value our on-site engineering trouble-shooting expertise and consultation services.

Our facilities in North America and Europe have the capability to test from the smallest components to large complete systems such as motor control centers and power distribution panel boards. Our lab provides precise graphical representation of even the lowest levels of current, voltage and time.

To keep you and ourselves competitive, we are continually reviewing and updating our data acquisition technologies, lab design, and test procedures. Turn to the Mersen high power test labs for expert, effective, accurate, and affordable high power electrical testing.

To schedule test time, contact us at:

Mersen Newburyport Laboratory

Phone: 978-465-4834

Fax: 978-462-7934

Email: highpowerlab.nby@mersen.com

Mersen Lyon Laboratory

Phone: +33 (0)4 72 22 69 90

Fax: +33 (0)4 26 29 29 26

Email: sylvie.rathoin@mersen.com

When a test date has been arranged, the client will be sent an Engineering Test Agreement which must be filled out and returned prior to the test date. This agreement verifies the test date, and sets forth contract conditions for the client and the lab. Liability and responsibility are explained in the test agreement.

Requirements

- Client Purchase Order
- All witnesses to test must conform to Test Lab Visitor's Safety Policy
- Clients must read and sign Visitor's Safety Policy
- Test Lab recommends that the client have an engineer present during actual testing to ensure compliance to any special requirements

Testing

- Summary sheet of test lab charges is available on request and will be sent with the Engineering Test Agreement
- Testing is normally run in accordance with recognized standards such as UL, CSA, MSHA, and IEC.
- All testing is treated with the strictest confidential awareness

PIQ Quiz

Come see what's new with PIQ

Test your knowledge of electrical protection with Mersen's Protection Intelligent Quotient Quizzes!

Visit the PIQ Quiz at: ep-us.mersen.com/resources/piq-quiz/

At the conclusion of every quiz, you can check out the "Learn More" page where you'll find a host of additional resources on the featured quiz topic - white papers, articles, calculators, brochures and more! You can also download our new handy one page summary of the quiz - the PIQ Quiz Notes.

There's more! Discover the PIQ Quiz Archive...

Explore earlier quizzes from our PIQ Archive, click the "Resources" tab on our website, select "PIQ Quiz" and click "PIQ Archives." Explore earlier topics such as:

- Arc Flash hazard protection
- Overvoltage protection
- Solar power circuit protection
- Selective coordination
- Code changes
- Bus Bar
- Power Electronics
- Semiconductor Fuses
- Short Circuit Current
- Surge Protection
- Thermal Protection

Mersen makes it easy to learn more because we understand that your customers don't just trust you; they rely on you. So trust Mersen to give you the products and the knowledge to be a real protection pro!

Read what our PIQ fans have to say...

The PIQ Quiz participants are engineers, electricians, design and specifying engineers, plant managers, distributors, consultants, and students. Like you, they are dedicated to electrical protection. They like the quizzes -and we bet you'll like them too. Here's what they've had to say:

- The quiz was very user friendly. The demonstrations made them more memorable.
- Great, informative graphics. My first thought on the first question was 'surge,' but picked 'sag' instead. The explanation that followed was very good.
- This is a simple and good test to check and update our knowledge about protection systems.
- The test was good information for anyone, but especially people in sales.
- I enjoyed listening to the explanations as to how things come about. The test is an interesting and self-challenging device, useful to keep a person up-to-date, and knowledgeable of Arc Flash and it's causes.
- Excellent. I'm the OSHA trained rep in our area. Very good basic safety slides.
- I hope you continue providing tests like these. They are an excellent source of knowledge in this relatively new field (solar power).
- Although the info did not pertain to our application, I always enjoy the information presented in the PIQ.
- It's the second PIQ quiz that I've taken, and I have found it to be most informative. Thanks for sharing this valuable information with us.
- The PIQ was a great surprise in my email. I enjoyed the challenge of the topic and questions.
- The quiz was very user friendly. The demonstrations made them more memorable.

Find out how much you know. Visit:

ep-us.mersen.com/resources/piq-quiz/

R-Tools® 3D Heatsink Modeling

Powerful Thermal Modeling Software

Mersen's R-Tools GEN III is the next generation of its completely re-designed interactive 3D Thermal Heatsink Modeling simulation software for power electronics applications. R-Tools GEN III is a no-charge on-line simulation software that allows users to model the optimum air cooled heatsink solution tailored to their project requirements. The simulation results aid in reducing design time and increasing the reliability of the finished heatsink product, all before the first prototype is even built. Running on internet browser, R-Tools is available to users around the clock, 24/7, with no time limits or costs.

R-Tools GEN III

Brand new release in 2015 with a whole new approach to help us serve our customers. Enter the boundary conditions in the software and it will select the most optimal heatsink for your project.

- Specifically for air cooling; Liquid cooling soon to follow.
- Works on mobile, tablets, and desktop devices
- Easier to design and faster results!

R-Tools GEN II

Second generation released as a designer tool allowing users to make choices to design the heatsink.

- Works for both air cooled and liquid cooled products.

Need More Support?

Mersen is a company that is easy to do business with. Our leading engineers will work with you to develop tailored solutions for removing damaging heat from your electronic systems. Our ongoing commitment to critical research in thermal management, means you'll benefit from new products and processes that meet the operating requirements of high heat flux power semiconductor modules. Using a combination of in-house modeling techniques and third-party labs for design verification, Mersen is committed to being your number one resource for cooling solutions.

Mersen Product Selector Tools

Select-A-Fuse®

The industry's first point-and-click, Windows®-based fuse selection software, Select-A-Fuse is fast, easy and accurate. With Select-A-Fuse, you can quickly and accurately choose the right overcurrent protection for low- and

medium-voltage motors, power and control transformers, and general loads.

With Version 4.1, you can do even more. Because in addition to product specs, melting time and peak let-thru curves, and the ability to check fuse coordination, our enhanced Select-A-Fuse software package features:

- An Arc Flash calculator you can use to calculate incident heat energies for Mersen's Amp-Trap 2000® current-limiting fuses
- Data and selection routines for our low- and medium-voltage capacitor fuses, High-Speed J fuses and FSPDB finger-safe power distribution blocks
- A cross-reference list with more than 18,000 entries

Select-A-Fuse will save you time and effort, and best of all, it's free. Visit the web address below to get your copy today.

Power Electronics Solutions

You can count on Mersen as a single-source supplier of electrical and thermal protection products for Power Electronics. By combining our extensive product line with the knowledge of our application experts, we have the unique ability to evaluate your needs and deliver the right solution.

A global manufacturing company with a century of experience, Mersen has remained strong and viable by consistently focusing on our day-to-day mission — ensuring the integrity of the equipment our devices protect and the safety of the people working around them.

Our zealous commitment to critical research in electrical safety has enabled us to turn industry knowledge into products and services customers can rely on. We consistently go the extra mile by helping our customers increase their effectiveness, simplify applications and enhance productivity.

For unbeatable technical support teams, design assistance in the earliest stages of an application through to final development, and a customer and sales service team that is easy to do business with, turn to Mersen.

Product Overview:

- Semiconductor fuses & fuse holders
- High speed fuses & fuse holders
- Control fuses & fuse holders
- Air and liquid cooled heatsinks
- Disconnect switches
- Surge protective devices
- Power distribution blocks
- High power switches
- Medium voltage fuses

Serving Companies that Manufacture:

- Drives
- Induction heating
- Inverters
- Motor controllers
- Rectifiers
- UPS
- Welding equipment

The Benefits of Mersen:

- Product breadth
- Technical knowledge
- Design assistance from day one
- Global manufacturing
- Innovative, problem solving products like Fabin® heatsinks, TPMOV® Technology, and the industry's first finger-safe UltraSafe™ fuse holders
- Easy to do business with!

Solar Power Solutions

Circuit Protection Solutions for solar power generation and distribution systems.

Drawing on a century of experience - and an ongoing commitment to critical research in electrical safety in both traditional and emerging markets - we provide solar power designers, engineering specifiers, solar power installers and solar power equipment manufacturers with innovative circuit protection products and unbeatable technical support.

Generating electricity from solar energy is an extremely reliable process – as long as it's properly protected! Mersen offers a trusted range of circuit protection solutions that will help protect your solar power investment. Any installation, whether it's a stand-alone solar array with a back-up generator set or a grid-connected system, is vulnerable to fault currents or lightning.

Today, fuses and surge protective devices are the most effective ways of protecting the wiring and electrical equipment in a Photovoltaic (PV) system. Fuses protect the cables between strings of modules from overcurrent damage. The faulty circuits are isolated allowing the system to continue generating power. But that protection must be designed, dimensioned, tested and adapted to the specific features of solar applications.

At Mersen, we offer a dedicated range of protection components specially designed for solar power generation and distribution including, fuses, fuse holders, wire management solutions, disconnect switches, and surge protective devices. For solar power circuit protection solutions you can rely on, contact Mersen.

MERSEN
Expertise, our source of energy

**A WORLD LEADER
 in the field of
 electrical protection**

A GLOBAL PLAYER

A global expert in materials and solutions for extreme environments as well as in the safety and reliability of electrical equipment, Mersen designs innovative solutions to address its

clients' specific needs to enable them to optimize their manufacturing process in sectors such as energy, transportation, electronics, chemical, pharmaceutical, and process industries.
