Series C and Special Application Moulded Case Circuit Breakers

EATON

Powering Business Worldwide

Series C and Special Application Moulded Case Circuit Breakers

Moulded Case Circuit Breaker Family

Series C Moulded Case Circuit Breakers

<i>Description</i>	<i>Catalogue Page No.</i>	<i>Section Page No.</i>
Product Line Overview	2	1.2
Product Line Description	2	1.2
Standards and Certifications	2	1.2
Quick Reference	3	1.3
15 – 100 Amperes (G-Frame)	6	G-1
10 – 225 Amperes (F-Frame)	13	F-1
70 – 250 Amperes (J-Frame)	21	J-1
70 – 400 Amperes (K-Frame)	27	K-1
125 – 600 Amperes (L-Frame)	41	L-1
300 - 800 Amperes (MDL-Frame)	53	M-1
400 – 1200 Amperes (N-Frame)	61	N-1
800 – 2500 Amperes (R-Frame)	74	R-1
Motor Circuit Protectors	93	MCP-1
Motor Protection Circuit Breakers	101	MPCB-1
Earth Leakage Circuit Breakers	103	ELCB-1
Internal Accessories	106	INTA-1
External Accessories	129	EXTA-1
Dimensions	159	DIM-1

Special Application Moulded Case Circuit Breakers

Current Limiting Circuit Protectors	165	CLCP-1
Engine Generator Circuit Breakers	182	EGCB-1
Direct Current Circuit Breakers	186	DCCB-1
E² Mining Service Circuit Breakers	199	E2MB-1
Classic Mining Service Circuit Breakers	222	CMCB-1
Add-On Ground Fault Protection(GFR)	236	GFR-1

Product Line Description

Eaton's Moulded Case Circuit Breakers are designed to provide circuit protection for low voltage distribution systems. They are described by NEMA as, "a device for closing and interrupting a circuit between separable contacts under both normal and abnormal conditions," and furthermore as, "a breaker assembled as an integral unit in a supporting and enclosing housing of insulating material." The NEC describes them as, "A device designed to open and close a circuit by non-automatic means, and to open the circuit automatically on a predetermined overload of current, without injury to itself when properly applied within its rating."

So designed, Eaton circuit breakers protect conductors against overloads and conductors and connected apparatus, such as motors and motor starters, against short circuits.

In low voltage distribution systems, there are many varied applications of moulded case circuit breakers. Eaton offers the most comprehensive family of moulded case circuit breakers in the industry.

This section of circuit breakers includes:

- Thermal Magnetic Trip Breakers
- Electronic rms Trip Breakers
- Moulded Case Switches
- Motor Circuit Protectors
- Current Limiting Breakers
- Special Application Breakers

Modified Breakers

Eaton breakers can be ordered with internal accessories installed. These modified breakers will be subject to an additional charge.

Special Calibration

Special non-CSA/UL-listed calibrations are available for certain ambient temperatures other than 40°C and for frequencies other than 50/60 Hz or DC.

Reduced interrupting ratings will apply for 400 Hz applications. Please refer to Eaton's Consulting Application Guide, (CA08104001E) pages 28.2 - 16 for details.

Suffix **H01** 400 Hz ①

50°C Calibration

Add suffix **V** to Catalogue Number for complete breaker, when ordering listed ampere ratings for breakers to be used in 50°C ambients.

Suffix **V** 50°C Calibration ①

Moisture-Fungus Treatment

All circuit breaker cases are moulded from glass-polyester which does not support the growth of fungus. Any parts which are susceptible to the growth of fungus will require special treatment.

Suffix **J01** Fungus Treated ①

Freeze-Tested Circuit Breakers

The circuit breakers may be ordered with freeze testing. This option uses special lubrication and mechanical operation is verified at -40°C.

Suffix **F01** Freeze Tested ①

Marine Applications

F- to R-Frame circuit breakers can be supplied to meet the following marine specifications:

- U.S. Coast Guard CFR 46 ABS — American Bureau of Shipping IEEC 45; DNV; Lloyds; and ABS/NVR

These specifications generally require moulded case circuit breakers to be supplied with special nameplating, and plug-in adapter kits. When plug-in adapter kits are used, no terminals need be supplied.

Circuit breakers can also be supplied to meet UL489 Supplement SA (Marine Use) and UL489 Supplement SB (Naval Use).

UL489 Supplement SA applies to vessels over 65 feet (19.8 m) in length. Requirements include 40°C ambient calibration, special labeling, and no use of aluminum conductors or terminals.

Suffix **H08** "Marine"

Or you can choose to add 50°C ambient but then there is no "UL" mark.

Suffix **VH08** "Marine" with 50°C ambient calibration

UL 489 Supplement SB requires partial 50°C ambient calibration, vibration testings, special nameplating and no use of aluminum conductors or terminals. Eaton chooses to always fully calibrate to 50°C ambient. ("Naval" labelled per UL and UL now allows 50°C label here).

Suffix **VH09** "Naval" with 50°C ambient calibration

Certified Test Reports

Eaton breakers can be ordered with certified test reports at the time of order entry for an additional charge. Test report documents the thermal and magnetic or electronic tripping characteristics of the individual breaker. Breaker and test reports must be ordered together.

Add suffix 12 to breaker catalogue number and enter separate line item on order for certified test report.

Standards and Certifications

Moulded case circuit breakers are designed to conform with the following standards:

- Underwriters Laboratories, Inc., Standard UL489, Moulded Case Circuit Breakers and Circuit Breaker Enclosures
- National Electrical Manufacturers Association Standards Publication No. AB1-1993, Moulded Case Circuit Breakers
- Australian Standard AS 2184, Moulded Case Circuit Breakers
- British Standards Institution Standard BS 4752: Part 1, Switchgear and Control Gear Part 1: Circuit Breakers
- Canadian Standards Association Standard C22.2 No. 5, Moulded Case Circuit Breakers and Circuit Breaker Enclosures.
- International Electrotechnical Commission Recommendations IEC 60947-2, Circuit Breakers
- Japanese T-Mark Standard Moulded Case Circuit Breakers
- South African Bureau of Standards, Standard SABS 156, Standard Specification for Moulded Case Circuit Breakers
- Swiss Electro-Technical Association Standard SEV 157-1, Safety Regulations for Circuit Breakers
- Union Technique de l'Electricite Standard NF C 63-120, Low Voltage Switchgear and Control Gear Circuit Breaker Requirements
- Verband Deutscher Elektrotechniker (Association of German Electrical Engineers) Standard VDE 0660, Low Voltage Switchgear and Control Gear, Circuit Breakers

Conformance with these standards satisfies most local and international codes, assuming user acceptability and simplified application.

Moulded case circuit breakers equal or exceed Federal Specification Classification W-C-375b requirements for the particular class associated with the circuit breaker frame being considered.

Open breakers do not have service entrance ratings. Service entrance rating is part of the enclosure.

① Circuit breaker manufactured with this option will be supplied without the CSA/UL certification label.

① N.I.T. is non-interchangeable trip unit and I.T. is interchangeable trip unit.

② Two-pole circuit breaker, or two poles of three-pole circuit breaker at 250V DC.

③ CSA listed only. Not UL listed.

④ UL listed only. Not CSA listed.

⑤ Current limiting.

⑥ The 175A 200A and 225A 2, 3 and 4 pole FDB breakers are CSA listed only, not UL listed.

① N.I.T. is non-interchangeable trip unit and I.T. is interchangeable trip unit.

② Two-pole circuit breaker, or two poles of three-pole circuit breaker at 250V DC.

Product Description

- All two- and three-pole circuit breakers are of the common trip type. On all 3-phase Delta (240V) Grounded B phase applications, refer to Eaton.
- Single-pole circuit breakers, 15 and 20 amperes. Switching duty rated (SWD) for fluorescent lighting applications.
- All G-frame circuit breakers are suitable for reverse feed use.
- HACR rated.

#8	40	4.52
#6-#4	45	5.09
#3-1/0	45	5.09

① Two poles of 3-pole circuit breaker. Two poles in series for 250 VDC application.
 ② Time constant is 8 milliseconds minimum.
 ③ 15 through 70A breakers only.
 ④ CSA listed only, Not UL listed.
 ⑤ UL listed only, not CSA listed.
 ⑥ Not CSA and UL listed sizes.

Type GD Thermal-Magnetic Circuit Breakers with Non-Interchangeable Trip Units

Type GD Circuit Breaker

Standards and Certifications

- UL/CSA.

Product Description

- Cable in, cable out.
- Includes mounting hardware and BMHE.

Typical F-Frame Breaker

F-Frame Breaker with Electronic Trip Unit

Product Description

- All F-frame circuit breakers are HACR rated.
- All circuit breakers 10 through 30 amperes are suitable for HID (high intensity discharge) use. 480 VAC max.
- All F-frame circuit breakers are suitable for reverse feed use.

① Trip unit has selectable I_T Settings.

② Z.S.I. (Zone Selective Interlock) is optional. Must order with ZSI. Standard 310+ does not come with ZSI.

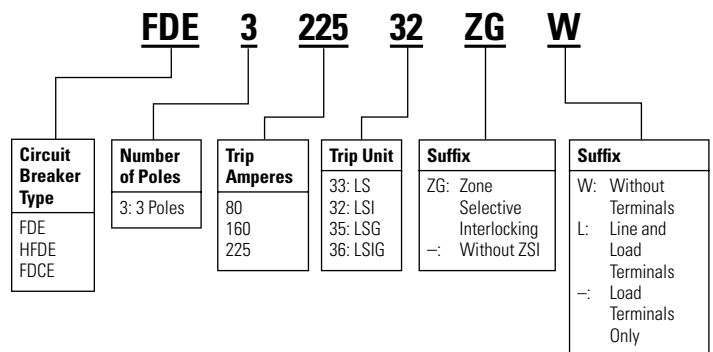

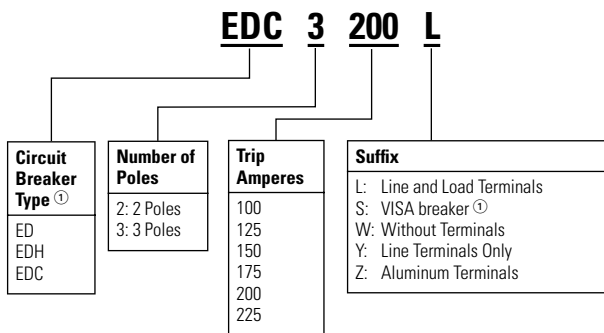

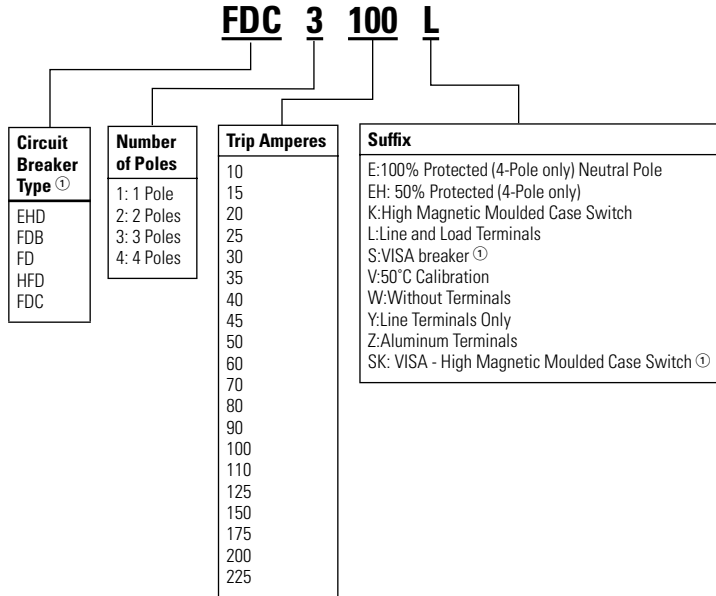

③ Occurs with Short Delay Time adjustment set at INST setting.

I_N = Frame Rating (80/160/225)
 I_T = LDCPU Setting

Catalogue Numbering System

This information is presented only as an aid to understanding Catalogue numbers. It is not to be used to build Catalogue numbers for circuit breakers or trip units.

Breaker Mount Ammeter

Description	Catalogue Number
Breaker Mount Ammeter and Cause of Trip Display	DIGIVIEW
Remote Mount Ammeter and Cause of Trip Display	DIGIVIEWR06

Note: Use on FDE, HFDE and FDCE electronic trip only.

Ammeter

① CSA and UL listed for SWD applications.
 ② 1-pole circuit breaker interrupting ratings @ 347 Vac are listed with CSA only. Not UL listed.
 ③ When a "VISA" type breaker is required, add suffix 'S' to circuit breaker catalogue number, i.e., HFD2020S. Available for 1-,2-,3-Pole breakers except 2-,3-Pole only for type FDC breaker.
 ④ Required for ground fault measurement in 3 phase 4 wires system with phase to neutral load. Not supplied with the breaker, must be ordered separately.
 ⑤ FDE, HFDE, FDCE Electronic Circuit Breakers with optional Zone Selective Interlocking function.

Moulded Case Switches ①

Moulded case switches are used as compact switches in applications requiring high current switching capabilities. Moulded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Moulded case switches are listed in accordance with CSA C22.2 No. 5 and UL 489 suitable for reverse feed use, and as 100% rated devices.

Note: Note: Moulded Case Switches may open above 1800 amperes.

HFD	2,3,4	100	65	25	22

① When a "VISA" type MCS is required, change the suffix of the MCS catalogue number from "K" to "SK". i.e., FD3225SK.

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. Except as noted, terminals comply with Canadian Standard Association standard C22.2 No. 65 and UL Standard UL486A and UL486B. Unless otherwise specified, F-frame circuit breakers are factory equipped with load terminals only.

Ordering Information

F-frame circuit breakers and moulded case switches have load terminals only as standard equipment. When standard line-end terminals (same as standard load-end terminals) are required, add suffix L to the circuit breaker catalogue number.

When non-standard or optional line and/or load terminals are required, order by style number. Specify if factory installation is required.

Line and Load Terminals

Maximum Breaker Amperes	Terminal Body Material	Wire Type	AWG Wire Range	Metric Wire Range mm ²	Package of 3 Terminals
					Catalogue Number

225	Aluminum	Cu/Al	#6-300 kcmil	16-150	3TA225FDK ②

3T20FB

Assemble wire clamp to bottom of conductor as shown.

3T100FB, 3T150FB

Insert collar enclosing conductor as shown. Locate nut on top of conductor and tighten securely with screw and washer. Caution: Collar must surround conductor.

3TA225FD

Insert collar enclosing conductor and centre on extrusion on collar. Install clip with legs on top of conductor and snap end around bottom of collar.

3TA50FB

Assemble collar on top of conductor as shown. Tighten securely with screw and washer.

3TA100FD

Collar slides onto conductor and is held in position by a screw and lock washer.

3TA225FDK

Assemble collar on top of conductor as shown. Tighten securely with screw and washer. Terminal shield must be used with this collar.

Note: For 185 mm² wire, use 3TA225FDK1. (IEC Application)

① Not for use with ED, EDH, EDC breakers.

② Includes terminal shield kit. Adds approximately 3 inches to breaker height. Available for use on 3-pole breaker only. Not for use on line side of F frame breaker rated 150A or less.

Allowable Accessory Combinations

Different combinations of accessories can be supplied, depending on the types of accessories and the number of poles in the circuit breaker.

① Not for use with Ground Fault styles (LSG, LSiG) Electronic Circuit Breakers and Electronic Circuit Breakers complete with Zone Selective Interlocking (ZSI) option.

② A special interface barrier is required. To be installed by the factory in U.S. or Perth only.

③ A special 1A/1B auxiliary switch is required. To be installed by the factory in U.S. only.

To specify a 1A/1B auxiliary switch be installed in the Right Pole with pigtail leads exit to **same side** of the breaker, add suffix '**A30**' to circuit breaker catalogue number.

To specify a 1A/1B auxiliary switch be installed in the Right Pole with pigtail leads exit to **rear** of the breaker, add suffix '**A31**' to circuit breaker catalogue number.

To specify a 1A/1B auxiliary switch be installed in the Right Pole with pigtail leads exit to **opposite side** of the breaker, add suffix '**A32**' to circuit breaker catalogue number.

Product Description

- All J-frame Circuit Breakers are HACR rated.
- J-frame circuit breakers are available as individual components (Frame, Trip Unit, Terminals), or factory assembled complete breakers.
- J-frame circuit breakers are suitable for reverse feed use.

^① 2-pole circuit breaker or two outside poles of 3-pole circuit breaker.

^② Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds minimum at 22 kA.

^③ Current limiting.

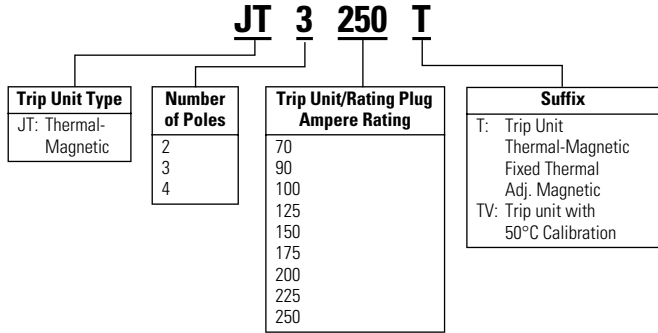

Catalogue Numbering System

This information is presented only as an aid to understanding Catalogue numbers. It is not to be used to build Catalogue numbers for circuit breakers or trip units.

Instruction Leaflet Number 29C103 for Breaker; 29C600 for Thermal Magnetic Trip Unit

① Individually packed.

② Fully rated neutral pole with no protection.

③ Neutral is in right pole.

④ 2-pole circuit breaker supplied in 3-pole frame

⑤ When a "VISA" frame is required, add suffix 'S' to circuit breaker frame catalogue number, i.e. JD3250FS. JD and HJD only.

⑥ Magnetic trip adjustable 5 - 10 times continuous ampere rating.

Moulded Case Switches^②

Moulded case switches are used as compact switches in applications requiring high current switching capabilities. Moulded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Moulded case switches are listed in accordance with CSA C22.2 No. 5 and UL 489, suitable for reverse feed use, and as 100% rated devices.

JD	2,3	65	35	18	10
HJD	2,3	100	65	25	22

^① Individually packed.

^② When a "VISA" type Moulded Case Switch is required, change the suffix of the MCS catalogue number from "KW" to "SKW", i.e. JD3250SKW.

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with CSA Standard C22.2 No. 65 and UL Standards UL486A and UL486B. Unless otherwise specified, J-frame circuit breaker line and load terminals are shipped separately for field installation.

The bottom of the standard TA250KB terminal contains a recess which is positioned over the J-frame circuit breaker terminal conductor.

Ordering Information

J-frame circuit breakers use Cu/Al terminals as standard. When optional copper-only terminals are required, order by Catalogue number. Specify if factory installation is required.

Typical K-Frame Circuit Breaker complete with the "VISA" option

Product Description

- All K-frame Circuit Breakers are HACR rated.
- K-frame circuit breakers are available as individual components (Frame, Trip Unit, Terminals), or factory assembled complete breakers. OPTIM circuit breakers are available as factory assembled only.
- K-frame circuit breakers are suitable for reverse feed use.

① 2-pole circuit breaker or two outside poles of 3-pole circuit breaker. Thermal-magnetic trip units only, DK, KD, HKD, KDC breakers with electronic trip unit are not DC rated.

② Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds minimum at 22 kA.

③ Protected neutral pole in 4-pole circuit breaker available only with optional Electronic Trip Units.

④ Current limiting.

Instruction Leaflet Number 29C104 for Breaker; 29C614 for Electronic Trip Unit

- ① Ampere rating is established by rating plug.
- ② For AC use only.
- ③ 3-pole KES Trip Units are for use in 3-pole frames only.
- ④ Individually packed.
- ⑤ 3TA400K and 4TA400K terminal kits contain one terminal for each pole and one terminal cover.
- ⑥ Trip unit includes protected neutral pole. Use corresponding 3-pole trip unit if protected neutral pole is not required.
- ⑦ Fully rated neutral pole protection is standard. For 50% rated protection on neutral pole, add suffix E to 4-pole trip unit Catalogue number.
- ⑧ When a "VISA" frame is required, add suffix "S" to circuit breaker frame catalogue number.

② 2TA400K and 3TA400K, terminal kits contain one terminal for each pole and one terminal cover.

③ When a 'Visa' frame is required, add suffix 'S' to circuit breaker frame catalogue number.

④ 2-pole circuit breaker supplied in 3-pole frame.

⑤ Ampere rating is established by rating plug.

⑥ For AC use only.

100% Rated Types CKD and CHKD Electronic Circuit Breakers

The CEC allows the breaker to be rated at 100% of its frame size in an assembly, provided that 90°C wire is applied at the 75°C ampacity. All 100% rated circuit breakers have electronic trip units.

Moulded Case Switch ^①

Moulded case switches are used as compact switches in applications requiring high current switching capabilities. Moulded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Moulded case switches are listed in accordance with CSA C22.2 No. 5 and UL 489, suitable for reverse feed use and are 100% rated devices.

Instruction Leaflet Number 29C092

① Long delay I^4t response selection limits short delay time to flat response.

② Factory sealed.

③ Eaton PowerNet, Zone Interlock functions, one Form C auxiliary switch and one Form C bell alarm switch are supplied with breakers as standard and are mounted on the right pole.

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with CSA Standard C22.2 No. 65 and UL Standard UL486A and UL486B.

Unless otherwise specified, K-frame circuit breaker line and load terminals are shipped separately for field installation.

Ordering Information

K-frame circuit breakers use Cu/Al terminals as standard. When optional copper or Cu/Al terminals are required, order by Catalogue number. Specify if factory installation is required.

■ Applicable in indicated pole position

□ May be mounted on left or right pole – not both

● Accessory available/Modification available

① 2-pole breaker supplied in 3-pole frame. Current carrying parts omitted from centre pole.

② Shunt trip and UVR cannot be mounted in right poles on KES or OPTIM trip units.

③ Alarm Switch, Auxiliary Switch, Alarm Switch and Auxiliary Switch Combination cannot be mounted on right pole of OPTIM 550 K-Frame circuit breaker.

④ OPTIM 1050 K-Frame circuit breaker is factory sealed and does not have right pole space available for accessories.

Typical L-Frame Circuit Breaker

Product Description

- All L-frame circuit breakers are HACR rated.
- L-frame circuit breakers are available as individual components (Frame, Trip Unit, Terminals), or factory assembled complete breakers. OPTIM circuit breakers are available as factory assembled only.
- L-frame circuit breakers are suitable for reverse feed use.

① Utilization category A circuit breakers.

② L/R = 8 milliseconds minimum.

③ 2-pole circuit breaker or two poles of 3-pole circuit breaker. Incorporating Thermal-Magnetic trip unit only.

④ 100% rated breakers.

⑤ Current limiting.

Instruction Leaflet Number 29C105 for Breaker; 29C615 for LES Trip Unit

100% Rated Types CLD, CHLD, and CLDC Electronic Circuit Breakers with Interchangeable Trip Units

The CEC allows the breaker to be rated at 100% of its frame size in an assembly, provided that 90°C wire is applied at the 75°C ampacity. All 100% rated circuit breakers have electronic trip units. Order as individual components: Breaker Frame, Trip Unit, Rating Plug and Terminals.

Instruction Leaflet Number 29C105 for Breaker; 29C615 for LES Trip Unit

① When a "VISA" frame is required, add suffix "S" to circuit breaker frame catalogue number. CLD & CHLD only.
 ② For AC use only.
 ③ Ampere rating is established by rating plug.

④ 3-pole LES Trip Units are for use in 3-pole frame only.
 ⑤ Trip unit includes unprotected right neutral pole. For 100% protected right pole neutral, add "P" to catalogue number. ie. LES4600LSP
 ⑥ Individually packed.
 ⑦ Terminal kits contain one terminal for each pole and one terminal cover.

Moulded Case Switches ①

Moulded case switches are used as compact switches in applications requiring high current switching capabilities. Moulded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Moulded case switches are listed in accordance with CSA C22.2 No. 5 and UL 489, suitable for reverse feed use, and as 100% rated devices.

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories, Inc., Standards UL486A and UL486B and CSA Standard C22.2 No. 65. Unless otherwise specified, L-frame circuit breaker line and load terminals are shipped separately for field installation.

The wire connecting terminal is secured with two pan-head, slotted screws and lock washers which can be checked for the correct torque loading or retightened from the front of the circuit breaker before installation of the conductors. (Applies to all styles.) The circuit breaker line/load terminal conductors are positioned in the conducting holes in the wire connecting terminal and are secured

with recessed socket screws which are tightened to the correct torque loading from the front of the circuit breaker.

Ordering Information

L-frame circuit breakers use Cu/Al terminals as standard. When optional copper terminals are required, order by Catalogue number. Specify if factory installation is required.

■ Applicable in indicated pole position

□ May be mounted on left or right pole – not both

● Accessory available/Modification available

① 2-pole breaker supplied in 3-pole frame. Current carrying parts omitted from centre pole.

② Refer to Eaton for appropriate neutral pole accessory combinations.

③ OPTIM model 1050 is factory sealed and does not have the right pole space available for accessories.

④ Shunt trip and VVR cannot be mounted in right poles on LES trip units or OPTIM trip units.

Typical M-Frame Circuit Breaker complete with the "VISA" option

Product Description

- All M-frame circuit breakers are HACR rated.
- MDL-frame circuit breakers are available as individual components (Frame, Trip Unit, Terminals), or factory assembled complete breakers.
- M-frame circuit breakers are suitable for reverse feed use.

^① Utilization category A circuit breakers.

^② 2-pole circuit breaker or two poles of 3-pole circuit breaker. Thermal-magnetic trip units only, MDL, HMDL breakers with electronic trip unit are not DC rated.

^③ Time constant is 3 milliseconds minimum at 10 kA and 8 milliseconds at 22 kA.

^④ 100% rated breakers.

Instruction Leaflet Number 29C111 for Breaker; 29C615 for MES Trip Unit

① Ampere rating is established by rating plug.
 ② When a "VISA" frame is required, add suffix "S" to circuit breaker frame catalogue number. ie. MDL3800FS
 ③ For Ac use only.

Moulded Case Switches ①

Moulded case switches are used as compact switches in applications requiring high current switching capabilities. Moulded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Moulded case switches are listed in accordance with CSA C22.2 No. 5.2 and Underwriters Laboratories, Inc., Standard UL 489 suitable for reverse feed use and as 100% rated devices.

Maximum Continuous Ampere Rating @ 40°C	600 Vac Maximum, 250 Vdc

N-12

Series C Moulded Case Circuit Breakers

400-1200 Amperes N-Frame

Type ND Moulded Case Switches ①

Moulded case switches are used as compact switches in applications requiring high current switching capabilities. Moulded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Moulded case switches are listed in accordance with CSA C22.2 No. 5 and Underwriters Laboratories, Inc., Standard UL 489 suitable for reverse feed use and as 100% rated devices.

Continuous Ampere Rating @ 40°C	Catalogue Number				Moulded Case Switch Type	Number of Poles	Unfused Short Circuit Withstand Rating (Symmetrical Amperes) (kA)

1200	ND312WK	ND412WK	HND312WK	-	HND	3,4	100	65	35	-

Moulded case switch may trip above 14,000 amperes.

Instruction Leaflet Number 29C106

Line and Load Terminals

Ordering Information

N-frame circuit breakers use Cu/Al terminals as standard. When optional copper or Cu/Al terminals are required, order by catalogue number. Specify if factory installation is required.

Maximum Breaker Amperes	Terminal Body Material	Wire Type	AWG Wire Range/No. Conductors	Metric Wire Range mm ²	Catalogue Number
Standard Cu/Al Pressure Terminals					
700	Aluminum	Cu/Al	(2) 1-500 kcmil	50-300	TA700NB1

R - Frame Circuit Breaker

Product Description

- R-frame circuit breakers are available as frame (which includes trip unit), rating plug and terminals.
- All R-frame circuit breakers are suitable for reverse feed use.

Instruction Leaflet Number 29C107 and 29C713 for Breaker; Number 29C883 for Digitrip 310 Trip Unit

① For SCR application use 2000 ampere frame.

② Unprotected right pole neutral. Add "P" to catalogue number for 100% protected right pole neutral, i.e., "RD416T33PW".

③ Add suffix "R" to breaker catalogue number for ground fault remote indication compatibility, i.e., RD316T35RW

④ When a "VISA" frame is required, add suffix "S" to circuit breaker frame catalogue number, RD and CRD only. i.e. RD316T33SW

Moulded Case Switches

Moulded case switches are used as compact switches in applications requiring high current switching capabilities. Moulded case switches are constructed of circuit breaker components and are of the high instantaneous automatic type. Moulded case switches are listed in accordance with CSA C22.2 No. 5 and Underwriters Laboratories, Inc., Standard UL 489 suitable for reverse feed use, and as 100% rated devices.

Line and Load Terminals

Line and load terminals provide wire connecting capabilities for specific ranges of continuous current ratings and wire types. All terminals comply with Underwriters Laboratories, Inc. Standards UL486A and UL486B and CSA C22.2 No. 65. Unless otherwise specified, R-frame circuit breaker line load terminals are shipped separately for field installation.

Ordering Information

R-frame circuit breakers have Cu/Al terminals as standard and Cu only terminals as an option. Specify if factory installation is required.

Motor Circuit Protectors

Product Description

Designated as Eaton Types GMCP, HMCP, the instantaneous-only motor circuit protector (MCP) is available in ratings from 3A to 1200A for motor starter sizes 0 through 8. The MCP is designed to comply with the applicable requirements of Underwriters Laboratories, Inc. Standard UL489, Canadian Standards Association Standard C22.2 No. 5, and International Electrotechnical Commission Recommendations IEC 157-1.

An innovative design of internal components allows higher MCP-starter combination interrupting ratings. The MCP is marked to permit proper electrical application within the assigned equipment ratings.

The MCP is a recognized component (UL File E7819) and complies with the applicable requirements of Underwriters Laboratories, Inc. Standard UL489. It is also designed to comply with the applicable requirements of Canadian Standards Association Standard C22.2 No. 5, International Electrotechnical Commission Recommendations IEC 157-1, and nameplates bear the CE marking ^①.

Note: Interrupting ratings are dependent on the starter it is used with.

^① Available with MCP labelled from Eaton in U.S.A. only.

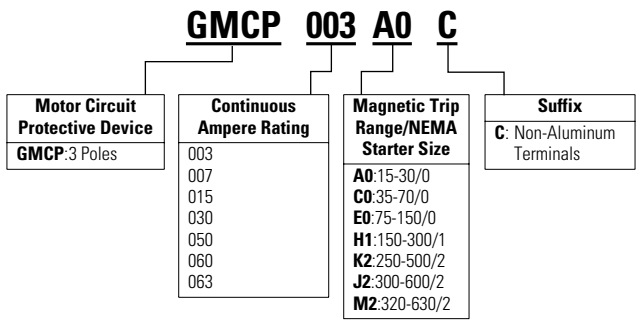

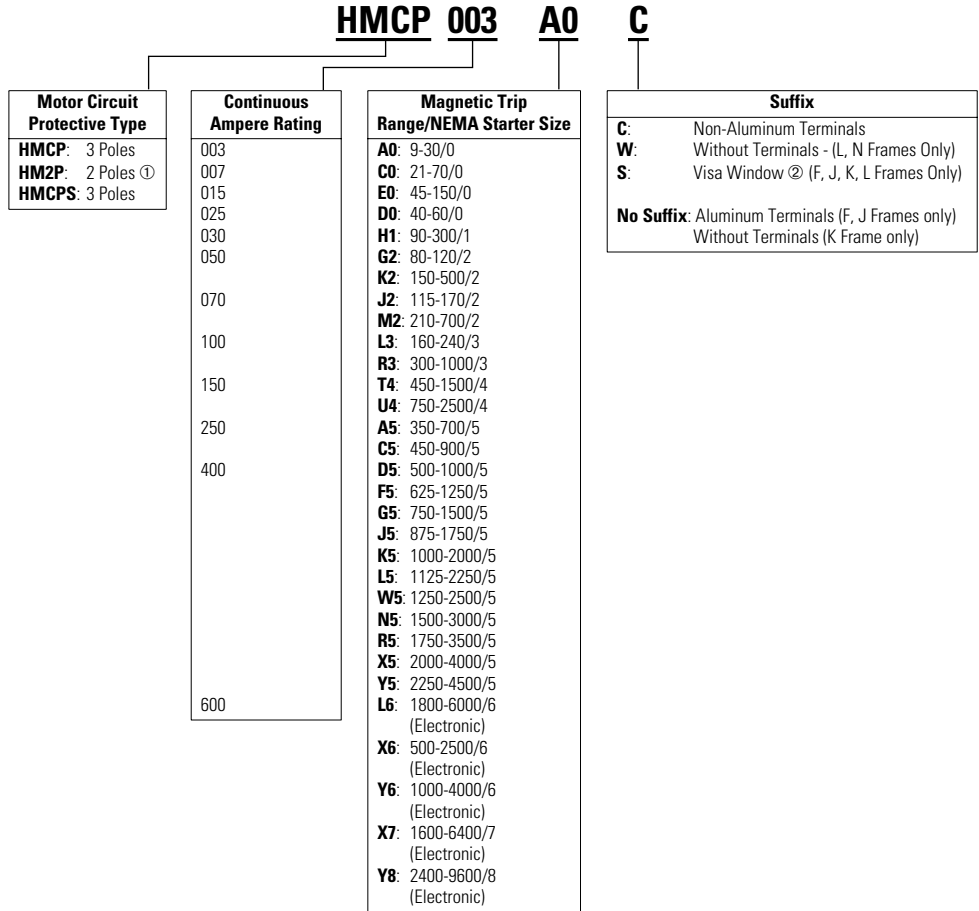

MCP-2 Series C Moulded Case Circuit Breakers

Motor Circuit Protectors

Catalogue Numbering System

This information is presented only as an aid to understanding Catalogue numbers. It is not to be used to build Catalogue numbers for circuit breakers or trip units.

Motor Circuit Protector Catalogue Number

① On J and K Frame HMCP's only.

② When a "VISA" frame is required, add suffix "S" to MCP Catalogue number. ie. HMCP100R3S, HMCP250A5S, HMCP400D5S, HMCP600L6S.

① Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown. Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.

② For DC applications, actual trip levels are approximately 40% higher than values shown.

③ Only one accessory may be installed in LH or RH of GMCP.

④ LH only.

⑤ RH only.

⑥ For use with standard 35 mm DIN rail such as, 35 x 7.5 or 15 mm per DIN EN50022.

⑦ For use with GMCP only.

Instruction Leaflet 29C401

Type ELC Current Limiter Attachment (Size 0-4)

The type ELC current limiter attachment for the MCP is designed to provide increased interrupting capacity. The combination may be used for the application up to 200,000A symmetrical at 600 Vac making the MCP suitable for use in network distribution systems or other applications where unusually high fault currents are available. The current limiter connects to the load end of the MCP and is provided with terminals suitable for copper or aluminum conductors. (See table).

Limiters are coordinated with the MCP so that normal fault currents are interrupted automatically by the MCP without any damage to the limiter. Only the rare very high fault is opened by the limiter. Faults that are interrupted by the limiter also magnetically trip the MCP, opening all three poles, preventing single-phase operation.

Each of the three poles of the type ELC limiter is equipped with an indicator that extends when a fault is interrupted by the limiter.

Type ELC Current Limiter Terminal Wire Sizes ⑤

Type ELC Current Limiter Maximum Amperes	Standard Aluminum Terminals		Non-standard Terminals (Steel)

Instruction Leaflet 29C403

① Three-pole Catalogue numbers shown. Two-pole Catalogue numbers begin with "HM2P" in place of "HMCP."

② Motor FLA ranges are typical. The corresponding trip setting is at 13 times the minimum FLA value shown. Where a 13 times setting is required for an intermediate FLA value, alternate cam settings and/or MCP ratings should be used.

③ For Dc applications, actual trip levels are approximately 40% higher than values shown.

Motor Protection Circuit Breakers

Motor Protection Circuit Breakers (MPCB)

Product Description

Motor protection circuit breakers (MPCBs) provide CSA C22.2 No.5 and UL 489 branch circuit protection, UL 508 and CSA C22.2 No. 14 motor protection, and meet IEC 60947-2 and 50947-4 requirements. Typical branch motor loads are protected by three-component starters, consisting of breaker, contactor and overload relay, or fuse, contactor and overload relay. The MPCB application-specific protection eliminates the need for motor overload relay found in the traditional three-component starter assembly. The branch motor load protection is simplified to an MPCB and contactor, reducing both space requirements and heat generation in customer panels. Protection is provided by application-specific electronic trip units.

The electronic trip unit provides typical motor overload relay functionality and short-circuit protection against potential phase-to-phase or phase-to-ground faults.

- Disconnecting means
- Branch circuit short-circuit protection
- Overload protection
 - Class 5, 10, 15 and 20
- Phase unbalance protection
 - FDMP breaker trips when there is a 40% difference between any phase compared to the calculated three-phase average
- Phase loss protection
 - Active when the maximum phase current is greater than 50% of FLA setting
 - Breaker will trip when minimum phase current is 25% or less than the maximum phase current
 - Time delay of 1 or 2 seconds before breaker trips

- Thermal memory to prevent immediate restart after overload trip to allow motor to cool down

The MPCB is based on the Series C F-Frame. Accessories for standard Series C breakers apply to the MPCB. Unlike Motor Circuit Protectors (MCPs), MPCBs are UL 489 and CSA C22.2 No.5 listed with 18 kA and 25 kA interruption ratings @ 600 Vac.

Typical Earth Leakage Circuit Breaker

General Information

Earth Leakage Moulded Case Breakers offer superior Class 1 ground fault protection and improved ground fault coordination capability, and are listed under UL489 and 1053 as well as CSA C22.2 No. 5 and 144 standards.

Earth leakage ground fault protection differs from other types of systems in its level of sensitivity. The sensitivity of traditional devices is limited by the cumulative error of the residual current sensors and the placement of the phase and neutral conductors inside the current sensor.

Earth leakage breakers and motor protectors are zero sequence sensing devices. They are factory supplied with a single sensor and ground fault relay built-in. This technique allows for protection sensitivities down to the 30 milliampere level.

Earth leakage breakers and motor protectors are provided with a full complement of easy adjustments. The ground fault pickup setting is adjustable from 0.03 to 30 amperes in eight steps, and the ground fault time delay setting is adjustable from instantaneous to 2.0 seconds in six steps. When the pickup is set to 30 mA, the time delay setting defaults internally to instantaneous only. Increased selectivity provides for improved coordination with upstream and downstream ground fault devices as well as the flexibility to adjust for transient currents.

Applications

Three-Phase, Four-Wire Loads

For three-phase applications with line-to-neutral loads, select 4-pole earth leakage breakers and wire the neutral through the fourth (right) pole.

Three-Phase, Three-Wire Loads

For applications with only three-phase, three-wire, line-to-line connected loads, select 3-pole earth leakage breakers.

Single-Phase Loads

For single-phase, 3-wire applications, use a 3-pole earth leakage breaker and connect all conductors through the breaker. For single-phase, 2-wire applications, wire to L1 - L2 or L2 - L3.

General

Do not reverse feed. Do not apply on 400 Hz system. Voltage range: 110 - 480 Vac.

Standard Features

- Built-in push-to-trip button for functional testing.
- Trip window indicates red when the breaker has tripped on a ground fault.
- Form C bell alarm contact^① for remote indication when the breaker has tripped under ground fault condition.
- Lockable adjustment seal helps prevent tampering with settings.
- Line and load terminals for bare cable connections.

Accessories

Optional Factory Installed Internal Accessories

Earth leakage breakers use the same internal accessories as standard F-, J- and K-Frame Circuit Breakers. Internal accessories fit in the right-hand pole space and are available as factory modifications only.

Optional External Accessories

Earth leakage breakers use the same external accessories as the standard F-, J- and K-Frame circuit breakers.

^① This Bell Alarm contact will not change state when the breaker has tripped on overload or short circuit condition.

Alarm Switch

General Information

For remote indication of automatic trip operation. Does not function with manual switching; however, it will operate when either a shunt trip or undervoltage release is operated.

A “make” contact closes and a “break” contact opens when the alarm/lockout switch operates. The switch automatically resets when the circuit breaker is reset.

Ordering Information

G-Frame

Note: G-frame circuit breakers are factory sealed. CSA and UL require that internal accessories be installed at the factory. Internal accessories are CSA and UL listed for factory installation.

- ① Endurance: 4000 electrical operations plus 4000 mechanical operations.
 ② Includes 24-inch external pigtail leads, 18 AWG (16-.010).
 ③ A maximum of two internal accessories may be mounted in a three-pole circuit breaker.
 ④ Suitable for mounting in right pole only of 2- or 3-pole breaker.
 ⑤ Not for use on 4-pole circuit breakers.
 ⑥ Endurance: 4000 electrical operations plus 4000 mechanical operations.
 ⑦ Non-inductive load.

- ⑧ Inductive (L/R = 0.026).
 ⑨ Not listed with CSA and UL for field installation.
 ⑩ Standard pigtail lead exit location.
 ⑪ Standard mounting location.
 ⑫ Factory installation only. Leads exit load end of circuit breaker.
 ⑬ Pigtail Wire size: No. 18 AWG (0.8 mm²).
 ⑭ Pigtail leads exit right side of circuit breaker.

Auxiliary Switch

General Information

The auxiliary switch provides circuit breaker contact status information by monitoring the position of the moulded cross bar which contains the moving contact arms. The auxiliary switch is used for remote indication and interlock system

verification, and consists of one or two SPDT switches housed in a plug-in module. Each SPDT switch has one "a" and one "b" contact. When the circuit breaker contacts are open, the "a" contact is open and the "b" contact is closed.

Ordering Information

^⑧ Endurance: 500 electrical operations plus 2500 mechanical operations.

^⑨ Pigtail wire size: No. 18 AWG (0.82 mm²). Leads are red, black and blue.

^⑩ A maximum of two auxiliary switches (any combination of 2a/2b or 4a/4b plug-in modules may be installed in a circuit breaker).

^⑪ For L-Frame breakers equipped with OPTIM 550 trip units, installation of PowerNet or Zone Interlock Kit restricts any other accessories from being installed in the right pole.

^⑫ For N-Frame breakers equipped with OPTIM 550 trip units, installation of PowerNet or Zone Interlock Kit restricts any other accessories from being installed in the right pole.

Auxiliary Switch and Alarm Switch Combination

General Information

Each catalogue number listed in the following table includes one auxiliary switch and one alarm switch. In an auxiliary switch ASL switch combination,

the auxiliary switch is always mounted on the side of the plug-in module next to the centre pole of the circuit breaker.

⑩ For N-Frame breakers equipped with OPTIM 550 trip units, installation of PowerNet or Zone Interlock Kit restricts any other accessories from being installed in the right pole.

Shunt Trip

General Information

The shunt trip provides remote controlled tripping of the circuit breaker. The shunt trip consists of an intermittent rated solenoid with a tripping plunger and a cutoff switch assembled to a plug-in module. When required for ground fault protection applications, certain Ac rated

shunt trips, as noted in the Electrical Rating Table, are suitable for operation at 55 percent of rated voltage.

NOTE: Shunt trips should not be used as circuit interlocks using maintained pilot devices.

Ordering Information

Select shunt trip catalogue number for the voltage within the indicated voltage range. Shunt trip coils are designed to be applied at specific Ac or Dc voltages within the voltage range shown. Electrical ratings are also shown on applicable circuit breaker accessory nameplates.

① Average unlatching time: 6 milliseconds.

② Average circuit breaker contact total opening time: 18 milliseconds.

③ Endurance: 4000 electrical operations plus 4000 mechanical operations.

④ Not listed with CSA and UL for field installation.

⑤ Pigtail wire size: No. 18 AWG (0.82 mm²).

⑥ Standard pigtail lead exit location.

⑦ 120 Vac marked suitable for ground fault protection devices.

⑧ Standard mounting location.

⑨ Not for use on 4-pole circuit breakers.

⑩ Endurance – 6000 electrical operations plus 2000 mechanical operations.

⑪ Supply voltages suitable for use with Class 1 GFP devices. Marking label included with accessory kits.

⑫ Listed with CSA and UL for field installation.

⑬ Standard mounting location – leads exit rear of breaker.

⑭ Suitable for use with Class 1 ground fault sensing element.

- ① Approximate unlatching time of 6 milliseconds.
- ② Average circuit breaker contact total opening time approximately 62 milliseconds, at rated voltage.
- ③ Endurance – 500 electrical operations and 2500 mechanical operations.
- ④ Shunt trip can be operated up to a maximum of six times per minute.
- ⑤ Maximum operating voltage – 110% of maximum voltage range rating.
- ⑥ Pigtail wire size – No. 18 AWG (0.82 mm²). Leads are yellow and white.
- ⑦ Suitable for use with Class 1 GFP devices; marking label supplied with accessory kit.
- ⑧ Listed with CSA and UL for field installation.
- ⑨ A maximum of two shunt trip plug-in modules may be installed in a circuit breaker.
- ⑩ Suitable for use with the 48V and 60V rated Capacitor Trip Device (Style # 1283C62G03 and G02).
- ⑪ Suitable for use with the 120V rated Capacitor Trip Device (Style # 1283C62G01).

INTA-15 Series C Moulded Case Circuit Breakers

Internal Accessories Low Energy Shunt Trip

Low Energy Shunt Trip

General Information

Low energy shunt trip devices are designed to operate from low energy output signals from dedicated current sensors typically applied in ground fault protection schemes. However, with a proper control voltage source, they may be applied in place of conventional trip devices for special applications. Flux paths surrounding permanent magnets used in the shunt trip assembly hold a charged spring poised in readiness to operate the circuit breaker trip mechanism. When a 100 microfarad

capacitor charged to 28 Vdc is discharged through the shunt trip coil, the resultant flux opposes the permanent magnet flux field, which releases the stored energy in the spring to trip the circuit breaker. As the circuit breaker resets, the shunt trip reset arm is actuated by the circuit breaker handle, resetting the shunt trip. The plug-in module is mounted in retaining slots in the top of the trip unit. Coil is intermittent-rated only. Cutoff provisions required in control circuit.

NOTE: Shunt trips should not be used as circuit interlocks using maintained contact pilot devices.

Ordering Information

F-, J-, K-, L-, M-, N-, R-Frames and HMCP (F), (J), (K), (L), (N)

Note: F-frame circuit breakers are factory sealed. CSA and UL require that internal accessories be installed at the factory. Internal accessories are CSA and UL listed for factory installation.

① Cutoff provisions required in control circuit.

② Except F-Frame Breaker and HMCP, Field Installation kits for J-,K-,M-,N- and R-frames are listed with CSA and UL for field installation.

③ Standard mounting location – leads exit rear of breaker.

④ For use with thermal-magnetic trip units only.

⑤ Breakers with K-Frame OPTIM 550 can only accept accessories in left pole.

Undervoltage Release Mechanism

General Information

The undervoltage release mechanism monitors a voltage (typically a line voltage) and trips the circuit breaker when the voltage falls to between 70 and 35 percent of the solenoid coil rating.

The undervoltage release mechanism consists of a continuous rated solenoid with a plunger and tripping lever mounted in a plug-in module. The tab on the tripping lever resets the undervoltage release mechanism when normal voltage

has been restored and the circuit breaker handle is moved to the reset (or OFF) position. With less than pickup voltage applied to the undervoltage release mechanism, the circuit breaker contacts will not touch when a closing operation is attempted.

Note: Undervoltage release mechanism accessories are not designed for, and should not be used as, circuit interlocks.

Ordering Information

Select handle reset undervoltage release mechanism catalogue number for the voltage within the indicated voltage range. Undervoltage release mechanism coils are designed to be applied at specific Ac or Dc voltages within the voltage range shown. Electrical ratings are shown on applicable circuit breaker accessory nameplates.

G-Frame

Note: G-frame circuit breakers are factory sealed. CSA and UL require that internal accessories be installed at the factory. Internal accessories are CSA and UL listed for factory installation.

Undervoltage Release Mechanism ④ (LH 3-Pole only)

Instruction Leaflet Number 15553

① Includes 24 inch external pigtail leads, #18 AWG (16-.010).

② A maximum of two internal accessories may be mounted in a three-pole circuit breaker.

③ Not listed with CSA and UL for field installation.

④ Pigtail leads exit left side of circuit breaker.

INTA-17 Series C Moulded Case Circuit Breakers

Internal Accessories Undervoltage Release Mechanism

F-Frame and HMCP (F)

Note: F-frame circuit breakers are factory sealed. CSA and UL require that internal accessories be installed at the factory.

Internal accessories are CSA and UL listed for factory installation.

- ① Endurance: 5000 electrical operations plus 1000 mechanical operations
- ② Listed with CSA and UL for field installation.
- ③ Standard mounting location — leads exit rear of breaker.
- ④ For use with LT (thermal-magnetic) trip units only.
- ⑤ Not for use on right pole of 4-pole circuit breaker.

- ① Endurance – 500 electrical operations plus 2500 mechanical operations.
- ② Pigtail wire size – No. 18 AWG (0.82 mm²). Leads are orange and brown.
- ③ UVR will override a momentary voltage dip up to the response time shown.
- ④ Unlatching occurs 1 millisecond before circuit breaker contacts begin to separate.
- ⑤ For 1 minute.
- ⑥ Listed with CSA and UL for field installation.
- ⑦ A maximum of two UVR plug-in modules may be installed in a circuit breaker.

INTA-23 Series C Moulded Case Circuit Breakers

Internal Accessories / Accessory Terminal Block / PowerNet and Zone Interlock Kit (OPTIM 550 only)

Accessory Terminal Block (R-Frame)

(For Fixed Mounted Configuration)

General Information

Internal accessory wiring leads are normally supplied with pigtail leads (No. 18 AWG) that exit from the right side of the circuit breaker. Where specified, fixed mounted accessory terminal blocks are available. A maximum of one 24-point terminal block can be installed on the right side of the circuit breaker for the internal accessories.

For convenience in determining the appropriate number of terminal block points required, refer to table at right.

Eaton's PowerNet and Zone Interlock Kits (OPTIM 550 only) K-, L-, and N-Frames

General Information

Eaton's PowerNet Communications Kit can be ordered to add PowerNet communications to an existing OPTIM 550 breaker in the field. An 18-inch wiring pigtail is routed to the rear of the breaker: two wires for PowerNet and two wires for 24V Dc (45 mA load). It is recommended that the power supply be an "isolated high quality" unit.

EXTA-6 Series C Moulded Case Circuit Breakers

External Accessories Drawout Cassette

Drawout Cassette

Product Description

The Drawout Cassette is currently for use with the standard 3-pole 50 kA/600V AC, 1600A and 2000A RD and RDC circuit breakers only. It consists of two separate components: the movable mechanism which is factory mounted to the circuit breaker frame (shown in figure) and the stationary mechanism which is housed in the cassette and shipped separately.

The drawout mechanism has four positions.

- Connected — The breaker is fully connected to the primary stabs and secondary contacts.
- Test — The breaker is not connected to the primary stab but is connected to the secondary contacts.
- Disconnected — Both the primary stabs and the secondary contacts are disconnected.
- Withdraw — The breaker can be removed from the cassette.

Movable mechanism must be ordered with RD or RDC circuit breaker and is shipped mounted to circuit breaker frame. Stationary mechanism is ordered separately.

All internal accessories must be factory installed for use with drawout.

Terminal Shields

Terminal Shields provide protection against accidental contact with live line side terminations. Terminal shields are fabricated from high dielectric insulating material and fasten over the front terminal access openings. Small openings in the shields provide limited access to the terminals for tightening connectors. (Field installation only). CSA listed.

EXTA-8 Series C Moulded Case Circuit Breakers

External Accessories Terminal Shields and End Covers

Terminal End Covers

F-Frame

Product Description

The Terminal End Covers are designed for use in motor control centre applications where, because of confined spaces, line side conductors are normally custom fitted. The moulded end covers are made of high dielectric glass-polyester and slide over the line ends of the circuit breaker. Close fitting conductor openings are moulded into the end covers. The end cover and circuit breaker case fit together to form terminal compartments that isolate discharged ionizing gases during circuit breaker tripping. Terminal end covers are available with two conductor opening diameters, 0.25-inch (6.4 mm) and 0.41-inch (10.4 mm), and are listed with CSA and UL. (Field installation only).

Ordering Information

The terminal end cover is available for 3-pole circuit breakers only. Two conductor opening sizes are available. Specify quantity (one per circuit breaker) when ordering.

F-Frame Terminal End Covers

10	1223C77G05 ^② (GPLKOFF)

^① Accepts .285 Lock Shank

^② Padlockable in the OFF position only.

The Snap-On Padlockable Handle Lock allows the handle to be locked in the OFF or ON position. (Trip-free operation allows the circuit breaker to trip when the handle lock holds the circuit breaker handle in the ON position.) This device was designed for use on the 1-pole circuit breaker, but may be used on 1-, 2-, 3- and 4-pole styles. The handle lock snaps onto the escutcheon area of the handle with an optional retaining screw for added secureness. The handle lock will accommodate one padlock with a 1/4-inch (6 mm) shackle. CSA and UL listed. (Field installation only).

Ordering Information

Padlockable Handle Lock Hasp

The Padlockable Handle Lock Hasp allows the handle to be locked in the ON or OFF position. (Trip-free operation allows the circuit breaker to trip when the handle lock holds the circuit breaker handle in the ON position.) The hasp mounts on the circuit breaker cover within the trimline. The cover is predrilled on both sides of the operating handle so that the hasp can be mounted on either side of the handle. The hasp will accommodate up to three padlocks with 1/4-inch (6 mm) shackles, one per circuit breaker. Listed per UL File E7819. (Field installation only.)

Cylinder Lock

The Cylinder Lock internally blocks the trip bar in the tripped position to prevent the circuit breaker from being switched to ON. The cylinder lock is factory installed in the left pole only of the circuit breaker cover. Other internally mounted accessories cannot be installed in the same pole as the cylinder lock. (Factory installation only.)

EXTA-12 Series C Moulded Case Circuit Breakers

External Accessories Mechanical Interlocking Devices

Key Interlock Kit (Lock Not Included)

The Key Interlock is used to externally lock the circuit breaker handle in the OFF position. When the key interlock is locked, an extended deadbolt blocks movement of the circuit breaker handle. Uniquely coded keys are removable only with the deadbolt extended. Each coded key controls a group of circuit breakers for a given specific customer installation.

The key interlock assembly is CSA and UL listed for field installation and consists of a mounting kit and a purchaser supplied deadbolt lock. The mounting kit comprises a mounting plate, which is secured to the circuit breaker cover in either the left- or right-pole position, key interlock mounting screws, and a wire seal. Specific mounting kits are required for individual key interlock types.

Ordering Information

Key interlock mounting kits are for field installation only. Select mounting kit Catalogue Numbers to match type of lock used. Key interlocks are supplied by customer.

Sliding Bar Interlock

The Sliding Bar Interlock provides mechanical interlocking between two adjacent 3-pole circuit breakers. It is installed on the enclosure cover between the circuit breakers. When the sliding bar interlock handle is moved from one side to the other, a bar extends to alternately block movement of the circuit breaker handles and prevents both circuit breakers from being switched to ON at the same time. Sliding bar interlocks are not CSA and UL listed. (Field installation only.)

Ordering Information

The sliding bar interlock is available for mounting between two adjacent 3-pole circuit breakers with circuit breakers centreline spacing as indicated in table

and enclosure front panel thickness of 1/8 or 3/16 inch (3.2 or 4.8 mm). (For field installation only.)

Walking Beam Interlock

The Walking Beam Interlock provides mechanical interlocking between two adjacent circuit breakers of the same pole configuration. The walking beam interlock mounts on a bracket behind and between the circuit breakers. A plunger on each end of the beam is inserted through an access hole in the back plate and base of each circuit breaker. The walking beam interlock prevents both circuit breakers from being switched ON at the same time.

If a walking beam interlock is installed, the wiring troughs in the back of the circuit breaker case are blocked by the plungers and cannot be used for cross wiring. Factory modified circuit breakers are required for this application. UL File E3816.

Ordering Information

The walking beam interlock is available for mounting between two adjacent circuit breakers spaced 1/4-inch (6.4 mm) apart and having the same pole configuration. The two circuit breakers must be factory modified to accept the walking beam interlock assembly (suitable for use with either 2-, 3- or 4-pole circuit breakers).

With properly modified circuit breakers, the walking beam interlock is suitable for field installation. Order circuit breakers specifying modification for walking beam and select walking beam interlock from table below. Circuit breakers and walking beam interlock are boxed and shipped separately.

EXTA-14 Series C Moulded Case Circuit Breakers

External Accessories Electrical Operator

Electrical Operator

Product Description

The Electrical (Solenoid) Operator is a single solenoid mechanism that enables local and remote circuit breaker ON, OFF, and reset switching. The electrical operator is mounted on the circuit breaker cover within the trimline of the circuit breaker. The electrical operator uses a unique bistable latch that allows the device to operate using one solenoid. The accessory provides high-speed switching with a maximum operating time of 5 cycles (80 ms), making it suitable for generator synchronizing applications.

Means are provided for remote electrical operation and for local manual operation. A special slide includes provisions for padlocking the circuit breaker handle in the OFF position. The slide will accept three padlock shackles with a maximum diameter of 1/4-inch (6 mm) each. An interlock electrically disconnects the solenoid when the electrical operator cover is removed. The Rating Data Tables provide electrical rating data for the electrical (solenoid) operator.

The Electrical (Motor) Operator allows the circuit's breaker to be opened, closed or reset remotely. It also has a lock-off capability and provisions for manual operation.

The Electrical (Motor) Operator contains a reversible motor connected to a ball screw. The ball screw drives the circuit breaker handle. Limit switches and relays are used to control the motor.

EXTA-16 Series C Moulded Case Circuit Breakers

External Accessories Plug-in Adapters

Plug-in Adapters

Product Description

Plug-in Adapters simplify installation and front removal of circuit breakers. Individual line and load plug-in adapters are available for rear connection applications on 2-, 3- and 4-pole circuit breakers. Common mounting plates for line- and load-end adapters are available. One plate is required per breaker.

One Plug-in Adapter Kit is required for line-end and one for load-end.

Rear Connecting Studs

Product Description

Rear Connecting Studs are available in several sizes to accommodate specific fixed-mounted circuit breaker applications.

Each rear connecting stud assembly consists of one stud and one tube. To maintain proper clearances between poles, select alternate long and short stud assemblies for circuit breakers with more than one pole. One assembly is required for line-end and one for load-end of each pole. Tubes must be ordered separately. Connecting studs are available only with English thread sizes.

EXTA-20 Series C Moulded Case Circuit Breakers

External Accessories Panelboard Connecting Straps

Panelboard Connecting Straps

Product Description

Panelboard Connecting Straps are used to connect the circuit breaker terminals to the panelboard bus. The panelboard connecting straps are available with various ratings for outside and centre poles. (Field installation only.)

Panelboard connecting straps are available to meet the needs of most standard panelboard applications. Style numbers for mounting brackets for CDP panelboard installations are also included.

Refer to panelboard manufacturer for compatibility.

Handle Mechanisms Overview

Handle Mechanisms are used to operate moulded case circuit breakers, moulded case switches and motor circuit protectors. They are available in three basic configurations — Flange Mounted, Through-the-Door and Direct (Close-Coupled) — providing safe, dependable operation and ease of installation.

- Flange Mounted
 - Flex Shaft
- Through-the-Door
 - Series C Rotary
 - Universal Rotary
- Direct (Close-Coupled)
 - Euro IEC
 - G Direct

Handle mechanisms are typically used on enclosed circuit breakers, control panels and motor control centres in many different applications. Eaton has a handle mechanism for virtually any need.

Flange Mounted Handle Mechanisms

Flex Shaft™

Flange Mounted Handle Mechanisms mount on the flange of an enclosure door. The Flex Shaft™ is an extra heavy-duty mechanism that includes a flexible shaft in various lengths, 3 feet (.9 m) through 10 feet (3 m) for use with various size enclosures.

The Flex Shaft Handle will accept up to three padlock shackles, each with a maximum diameter of 3/8-inch (9.5 mm). Can be used with NEMA 1, 3R and 12 fabricated enclosures. An optional handle is available for Flex Shaft that is suitable for use with NEMA 4 and 4X environments. Flex Shaft comes preset from the factory, requiring only minor field adjustments on installation, which takes about 10 minutes — a significant time savings compared to installation of other types of flange handle mechanisms. The Flex Shaft mechanism also takes up less interior enclosure space than competitive designs and the handle fits standard flange cutouts. Flex Shaft handle can be remotely mounted from breaker, where an operator can use it by “funneling” the cable through conduit.

Flex Shaft is UL Listed under File E64893 and meets CSA requirements.

Note: Refer to Eaton’s Catalogue “Your Electrical Solutions” (3rd Edition), section 3, Pages 3 - 76 for information on type Vari-Depth, Slide Plate, MC, SM and AMT handle mechanisms.

Note: Type 4/4X handle mechanisms are available. Add Suffix **X** to complete Catalogue Number.

Add Suffix **I** to complete Catalogue Number for IEC handle.

Original narrow handle design (No C Suffix) is available. Remove **C** from Catalogue Number.

Note: When selecting the length of shaft, ensure minimum bending radius of 4 inches (101.6 mm) is maintained to operate properly, for G, F, J, K Frames. (5 inches [127mm] for L, N, R Frames)

The standard method of shipment includes the mechanism preset at the factory; however, minor field adjustments may be required.

Note: Dual breakers operator available on F-Frame only.

Only the F, J & K can mount LH & RH, all others RH only.

^① Suitable for GHC, GCH and GD circuit breakers and moulded case switches; not suitable for GMCP.

Flex Shaft Accessories (F- through R-Frame)

Type C361 NEMA 12 Safety Door Hardware

Type C361 Door Hardware Kits are designed to function with the Flex Shaft operating mechanisms.

These kits are designed to use with small enclosures up to 40 inches, intermediate 40-60 inches or larger floor cases over 60 inches to provide enclosure sealing and protection against unauthorized entry. These kits can be used on enclosure flanges with material thickness ranging from 16 gauge through 3/16 inches with flanges on the right side only. Door hardware kits are to be installed in a commercially available enclosure. Consult the enclosure manufacturer application data for proper kit selection.

Through-the-Door Handle Mechanisms

Series C Rotary

Universal Rotary

Through-the-Door Handle Mechanisms mount on the front of an enclosure or cabinet door and externally operate the circuit breaker via a variable depth shaft or a linear operator (Type MC). Each rotary type handle mechanism includes a handle, base operating mechanism and shaft that can be cut to various lengths.

Series C Rotary handle mechanisms are for use with Moulded Case Circuit Breakers (F, J, K, L, MDL, N), Moulded Case Switches and Motor Circuit Protectors.

Series C Rotary is suitable for use with NEMA 1, 3R, 12 and 4/4X enclosure types. Type 4/4X application requires special handle, see "Ordering Information".

The Universal Rotary handle mechanisms are for use with Moulded Case Circuit Breakers (G, F, J, K, L, MDL), Moulded Case Switches and Motor Circuit Protectors.

The Universal Rotary is suitable for use with NEMA 1 and 12 enclosure types.

All Rotary handle mechanisms include a handle "Lock Off", to prevent turning the breaker ON while in the OFF position. All Rotary handles indicate ON/OFF/Tripped/Reset positions, however, Universal Rotary has the added feature of international markings for ON (I) and OFF (O).

Series C Rotary handle is metal, Universal Rotary handle is made of moulded material. Series C Rotary handle is black and Universal Rotary is available in black or yellow/red.

Series C Rotary handle was ergonomically designed with extra clearance for a "gloved hand" to operate. Handle has a 45 degree rotation. Universal Rotary has a 90 degree rotation ("pipe valve" operation) where ON is vertical and OFF is horizontal. Shafts include a support brace to ensure proper alignment. In addition, the 16-inch (406.4 mm) and 24-inch (609.6 mm) extra long shafts include an adjustable support bracket.

Series C Rotary and Universal Rotary, are UL Listed and meet CSA requirements. Universal Rotary also meets IEC947-1/2 for international compliance. Rotary UL File Number E64893.

- ① Complete Catalogue Number includes the standard handle, mechanism, shaft and support brace/bracket. Type 4/4X handle mechanisms are available. Add suffix X to complete catalogue number.
- ② Standard handle is designed suitable for Types 1, 3R and 12 enclosures. For International type standard handle, contact Eaton for style numbers.
- ③ Breaker mechanism includes a shaft support bracket and its parts.
- ④ Longer shafts, 16-inch (406.4 mm) and 24-inch (609.6 mm), include an adjustable support extension.
- ⑤ IEC Handle Mechanism supplied with Metric thread mounting hardware.
- ⑥ Complete Catalogue Number includes a handle, mechanism and shaft.
- ⑦ For International type 4/4X handle, contact Eaton for style numbers.

Type 4/4X handles are similar to standard handles except they include an internal neoprene gasket. Due to gasketing effect between the handle and the housing, the handle may not indicate a tripped position.

EXTA-26 Series C Moulded Case Circuit Breakers

External Accessories Handle Mechanisms

Direct (Close-Coupled) Handle Mechanisms

Product Description

Direct (Close-Coupled) Handle Mechanisms mount directly to the circuit breaker. They are used in shallow enclosures where the standard variable depth Through-the-Door type mechanism is not practical or cannot be used. They are typically for applications where high volume, standardized enclosures are being fabricated.

The Euro IEC Direct handle mechanism can be used on F- through R-Frames.

The G Direct is available with a black or yellow handle, and with or without a shroud. It is suitable for use with NEMA 1 enclosures. It is for use only with the G-Frame (GD, GHC, GCH, GMCP).

An escutcheon ring and interlock clip are provided as standard. The standard design includes a lock-off feature.

The Euro IEC Direct handle mechanism is IEC-240-1. G Direct is UL listed and meets CSA requirements.

EXTA-28 Series C Moulded Case Circuit Breakers

External Accessories Current Limiters, Alarms, Monitors and Test Kits

Type LFD Current Limiter ①

The LFD Current Limiter is an accessory that bolts to the load end of a standard FDB, FD, HFD or FDC thermal-magnetic circuit breaker, providing 200,000A interrupting capacity at up to 600V AC. LFD current limiters for thermal-magnetic circuit breakers are listed with CSA and UL. (UL File E47239).

① The LFD Current Limiter can also be used with the 3-pole FDE, HFDE or FDCE electronic circuit breakers.

IQ Energy Sentinel

The IQ Energy Sentinel is a highly accurate, microprocessor-based, breaker-mounted device designed to monitor power and energy readings. It represents an alternative to watt meters, watt-hour meters, and watt demand meters. Key advantages include savings in space, lower installation costs, and remote monitoring capability.

The IQ Energy Sentinel mounts on the load side of a Series C F-Frame (150 ampere) circuit breaker. It can be applied on three-phase, four-wire systems, or single-phase, three-wire systems with voltage connected through phases A and C.

Note: Instruction Leaflet Number 17437

For more information see Descriptive Bulletin 8178.

Ground Fault Alarm Unit

The Ground Fault Alarm Unit is a remotely mounted device with a combination indicating light/test button that will light when the breaker trips or alarms on ground fault. The Ground Fault Alarm Unit requires a separate 120V AC power source to power the light and the internal relay which has 1NO and 1NC contacts for remote indication. The Ground Fault Alarm Unit can be panel mounted for ordering with an optional face mounting bracket.

For use on Digitrip 310 LSG and LSIK trip units K- through N-Frame and Digitrip Optim 550/1150 LSIK and LSIA trip unit c/w Zone interlocking feature (K-, L- & N-Frame).

Solid-State (Electronic) Portable Test Kit

The Solid-State (Electronic) Portable Test Kit provides verification of performance of all ratings of Digitrip 310 electronic trip units installed in circuit breakers while in service under varying load and/or phase imbalance. The test kit operates on 120-volt, 50/60 Hz power; it includes complete instructions and test times for testing long time, short time/ instantaneous operation and optional ground fault operation of the circuit breaker.

Solid-State (Electronic) Portable Test Kit	STK2

Note: Instruction Number 270

Breaker Interface Module (BIM)

The Breaker Interface Module (BIM) is a panel mounted user interface device that is mounted on the front of an electrical assembly or at a remote location. The BIM is used to access, configure, test and display information for OPTIM trip units and other devices. The BIM consists of four display windows, eight function buttons, 18 LEDs, and a graphical time/current curve to provide breaker status, operational information, protection status and energy monitoring. A 24V DC power supply is required to provide power to the BIM. This is supplied by the switchboard builder to Eaton's specifications. The BIM is a member of Eaton's PowerNet family of communicating devices that connects OPTIM trip units, Digitrip RMS 810/910 trip units and energy sentinels as a subnetwork system. The BIM can also be connected to a main network via a PONI module to PowerNet software.

Catalogue
Number

BIMII

Note: Instruction Leaflet Number 29C893

Digitrip OPTIMizer

The Digitrip OPTIMizer is a hand-held programmer that is used to access, configure, test and display information from OPTIM trip units. The OPTIMizer plugs into the front of an OPTIM trip unit via an eight-pin telephone jack and is powered by a nine-volt battery or the auxiliary power module. One highlighted feature is the "Copy" and "Download" commands. Setting up multiple OPTIM trips can be finished in minutes and with no errors. An Auxiliary Power Module connection provides a trip test when control power is not present at the breaker. The OPTIMizer is supplied as a standard package to include the programmer, the eight-pin connection cord, battery and carrying case. The Auxiliary Power Module is optional.

Ordering Information

Number

OPTIMizer – Standard Package

Note: Instruction Leaflet Number 29C892

Note: 24V DC Power Supply

A 24V DC power supply is required for all Digitrip OPTIM trip units that are required to communicate either on the main Eaton PowerNet network or as a subnetwork to a BIM. The breaker's load is 45 mA of current. Typically one power supply is required per switchboard and can provide control power to a BIM and the OPTIM trip units. The 24V DC power supply should be an "isolated high quality" power supply with a "CE" label, and is normally provided by the switchboard manufacturer to Eaton's recommendations.

Auxiliary Power Module

The Auxiliary Power Module is a power supply requiring 120V AC input at 50 or 60 Hz that provides a 32V DC output. The Auxiliary Power Module provides control power for testing an OPTIM trip unit when other means of control power is not available or for continuous OPTIMizer operation versus temporary with a battery. The Auxiliary Power Module connects into the top of the Digitrip OPTIMizer via a keyed receptacle. The main application for the Auxiliary Power Module would be for the testing of a stand-alone non-communicating OPTIM breaker that ordinarily would not have control power.

Note: The OPTIMizer can work off of 32V DC control power, although 24V DC is the standard on OPTIM breakers.

Potential Transformer Module

The Potential Transformer Module is required for Digitrip OPTIM 1050 to provide a voltage input to allow the trip unit to monitor power and energy as well as power factor. The Potential Transformer Module is a 6 VA transformer with a primary voltage input of up to 600V line to line. Three 0.1 ampere fuses are provided on the primary of the transformer and can be used for isolation purposes during dielectric testing. The device is normally panel mounted and can feed up to 16 OPTIM trip units.

① DC rating applies to 350 amperes maximum thermal or to magnetic only breakers.

② 2-pole breakers or trips are supplied in 3-pole frames with current carrying parts omitted from the centre pole.

③ 60 Hz AC only.

Note: Instruction Leaflet Number 13771 for Trip Unit and Fuse

Current Limiters

Included with complete breaker, one required per pole.

Current Limiters

Application	Catalogue Number
Supplied as standard on ratings through 500 amperes.	500NBP12
Supplied as standard on 600 – 800 ampere ratings, optional on lower ratings when a higher “cross-over point” is desired.	800NBP20
Above two limiters replace 1000NBP14 formerly supplied on ratings up to 600 amperes, 1500NBP20 supplied on 700 amperes, and 2500NBP25 supplied on 800 amperes.	

Terminals (Order Separately)

Two terminals are required per pole. Terminals are CSA and UL listed for wire size and type listed below. When used with aluminum conductors, use joint compound. To order optional aluminum terminals, add Suffix **Z** to complete breaker Catalogue Number.

Note: Shipped separately from breaker.

Terminals

Max. Amp Rating	Wire Range, Type, Number of Cables	Terminal Catalogue Number
Standard Copper Pressure Terminals		
350	(1) 1 AWG – 600 kcmil Cu	T350NB
700	(2) 2/0 – 500 kcmil Cu	T700NB1

Optional Al/Cu Pressure Terminals		
700	(2) 1 AWG – 500 kcmil Al/Cu	TA700NB1
800	(3) 3/0 – 400 kcmil Al/Cu	TA1000NB1
800	(3) 500 – 750 kcmil Al/Cu	TA1201NB1

Type PB Tri-Pac Breaker

Type PB Tri-Pac Thermal-Magnetic Circuit Breakers — Fused

Product Description

- 600 to 1600 amperes, 600V AC, 60 Hz AC, 250V DC
 - Note:** Higher frequency calibration not available. Minimum of 50 Hz calibration available on special order.
 - Note:** 250V DC rating applies only to magnetic only breakers.
- 2-, 3-pole interchangeable trip, replaceable current limiters

Standards and Certifications

- Listed with Canadian Standards Association and Underwriters Laboratories except as noted

Dimensions/Weights

505C706G04

Special Breakers

Magnetic Only Type Tri-Pacs available on request.

Note: Not listed with CSA and UL.

Options and Accessories

Alarm Switch

For light or alarm indication when breaker trips. Does not function with manual operation. Automatically resets when breaker is re-latched. Standard leads extend 18 inches (457.2 mm) outside of breaker. Not field mountable.

Alarm Switch

Breaker Frame	Normal Pole Meeting	Contact Operation (Specific Type Desired)
FCL	centre	Make or Break
LA Tri-Pac	Left	Make or Break
NB Tri-Pac	Left	Make or Break
PB Tri-Pac	Left	Make or Break
LCL	Left ①	Make or Break

① When alarm switch is used in conjunction with auxiliary switch, the auxiliary switch is rated 250 volts max., 5 amperes maximum.

Alarm Switch Contact Rating (Non Inductive) LA Tri-Pac: 10 amperes, 120V AC; 5A, 240V AC.

Auxiliary Switch

For auxiliary control circuits. Miniature switches mount within breaker. Commonly used for remote indication of open or closed breaker and electrically interlocking component control circuits. "A" contacts are closed when breaker is closed. "B" contacts are open when breaker is closed. Standard leads extend 18 inches (457.2 mm) outside of breaker.

Note: Left-hand mounting is standard unless otherwise specified.

Auxiliary Switch Attachment Kits for Field Mounting ②③

LCL	1372D49G03	1372D49G06	480	6 (10@240)

② All switches are multiples of 1A-1B with a common electrical connection (see Figure).

③ Field mounting voids CSA and UL listing of breaker except on LCL, NB Tri-Pac and PB Tri-Pac breakers.

④ For DC applications refer to Eaton.

Note: Instruction Leaflet Number 14535 NB Tri-Pac; 14534 PB Tri-Pac; 15279 LCL

Factory Mounted Auxiliary Switches

Note: Left-hand mounting is standard unless otherwise specified.

All of the above auxiliary switches can be specified for factory mounting at the same price as listed for the kit. These attachments have the leads out the side of the breaker and are CSA and UL listed when factory mounted unless other non-CSA/UL-listed modifications are used (except as noted).

Factory mounted switches only can be supplied for the following breakers: FB Tri-Pac, LA Tri-Pac. Order by description.

Note: Right-hand mounting for FB Tri-Pac only.

Auxiliary Switches

CLCP-12 Special Application Moulded Case Circuit Breakers

Current Limiting Circuit Protectors Accessories

Shunt Trip

For tripping breaker from a remote point. A solenoid device mounts within breaker case. Breaker trips when coil is energized.

Shunt trips should not be used as circuit interlocks using maintained contact pilot devices.

A cutoff switch breaks the circuit to the momentary rated coil when breaker opens. Available for control voltages up to 250V DC or 600V AC. Voltage and frequency must be specified. Standard leads extend 18 inches (457.2 mm) outside of breaker.

① 120V AC ratings suitable for 55% pickup for ground fault applications.

② Not field mountable on non-automatic breakers (MCS).

③ Field mounting voids breakers' CSA and UL listing except on NB Tri-Pac and PB Tri-Pac.

Note: Instruction Leaflet Numbers 15194 (FCL); 14919 (NB Tri-Pac); 14940 (PB Tri-Pac)

Factory mounted shunt trips only can be supplied for FB Tri-Pac and LA Tri-Pac breakers. Order by description.

Note: Right-hand mounting for FB Tri-Pac only, not CSA and UL listed.

Left-Hand Mounting Kits for Type LCL Current Limiting Breakers ^④

Description	Catalogue Number
Provision to trip flux transfer shunt trip from external 32 to 120V (DC to 60 Hz) source. ^{⑤⑥}	1372D49G22
Provision to trip flux transfer shunt trip from external 240 to 600V (50/60 Hz) source. ^{⑥⑦}	1372D49G32

④ CSA and UL listing pending. Refer to Eaton.

⑤ Rated 48V minimum for ground fault applications.

⑥ Also available factory mounted for 24V DC. Order by description.

⑦ Not for ground fault.

Note: Instruction Leaflet Number 15279

Shunt Trip Coil Data for Type LCL Current Limiting Breakers

Shunt Trip Voltage Rating	Coil Inrush	
	Amperes	Volt-Amperes
120 AC	.15	18

Standard Undervoltage Release

For undervoltage protection. A solenoid device mounts within breaker case. Coil must be energized before closing breaker. Trips breaker when voltage drops below 40 to 60% of coil rating. Picks up and seals in at 80% of coil rating. For line voltages up to 250V DC or 600V AC. Externally mounted resistors are supplied for certain ratings. Standard leads extend 18 inches (457.2 mm) outside of breaker.

Note: U.V.R. attachments are not designed for, and should not be used as, circuit interlocks. For further information, refer to Eaton.

Factory Mounted Undervoltage Releases

NB Tri-Pac and PB Tri-Pac undervoltage releases can be specified for factory mounting at the same price as the kit. These attachments have the leads out the side and are UL listed when factory mounted unless other non-CSA/UL listed modifications are used.

Note: Right-hand mounting considered standard unless specified otherwise.

Factory mounted undervoltage releases only can be supplied for the following breakers: FB Tri-Pac, LA Tri-Pac and FCL; LCL 120V AC only. Order by description.

Note: Right-hand mounting for FB Tri-Pac only. UL listing pending for LCL.

CLCP-14 Special Application Moulded Case Circuit Breakers

Current Limiting Circuit Protectors Accessories

Rear Connected Studs

For complete stud assembly, order a stud and appropriate tube based on thickness of customer's mounting panel. A short stud must be assembled adjacent to a long stud to maintain clearances required by CSA and UL. Two studs are required per pole.

Note: Not CSA and UL listed.

Note: Two 400 ampere LA studs of the same length have sufficient clearance; however, customer connections may make it necessary to use a short stud adjacent to a long stud.

Panelboard Connecting Straps

For connecting line end of breakers to panelboard bus.

Note: Not Underwriters Laboratories listed.

② 150, 250, 300 and 400 ampere frames only.

Plug-In Adapter Kits

For rear connected applications such as switchboards. Facilitates ease of installation and front removal of breaker. Includes conductor for mounting on breaker, plug-in mounting blocks with matching conductor, rear studs and mounting hardware. Order two mounting block style numbers when line and load are required; order one mounting block style number when either line or load is required.

Moisture-Fungus-Corrosion Treatment

Treatment can be provided to meet customer's specific atmospheric conditions. Moisture-fungus treating material used meets JAN-T-152; treatment meets MIL-V-173a. Requests and orders should specify government specifications or conditions to be met.

Note: Not CSA and UL listed.

Handle Locks

Non-padlockable

For prevention of unintentional operation of breaker. Fits over breaker handle and may be removed.

Padlockable

For prevention of unauthorized operation of breaker. Is non-removable once installed on breaker.

Note: All breakers are trip free and will trip with handle locks attached. Cannot be used when handle extension is used.

Kirk Key Interlock

Availability: FB, LA, NB, PB Tri-Pacs.

Permits interlocking of two breakers or one breaker with other devices. Before breaker can be closed, key must be inserted and turned in breaker interlock. Breaker must be opened before key can be removed. It can then be inserted in interlock or other devices to permit their closure. Requests and orders should completely outline interlocking scheme, ultimate user and his address.

Note: Not available for FCL or LCL breakers.

Note: Not available on motor operated breakers.

Mechanical Interlocks

For mechanically interlocking a pair of breakers so that only one may be closed at one time, but both may be open simultaneously.

Walking Beam Type

Mounts on panel (not included) at rear of breaker. Standard breaker spacing: LA Tri-Pac, NB Tri-Pac: 8-1/2 inches centre to centre; FB Tri-Pac: 4-3/8 inches centre to centre; PB Tri-Pac: 12-1/4 inches centre to centre. Order as a set of two special factory drilled breakers and one walking beam interlock. Specify breaker type, panel thickness and centre-to-centre dimension of breakers.

Note: Not CSA and UL listed. Not available on drawout breakers. Not available for FCL or LCL breakers.

Sliding Bar Type (Field Mountable)

Mounts on panel (not included) fitting over front of breakers. Standard breaker spacing: LA Tri-Pac, NB Tri-Pac: 8-1/2 inches (215.9 mm); FB Tri-Pac: 4-3/16 inches (106.4 mm) centre to centre.

Note: Not CSA and UL listed. Not available on drawout breakers. Not available for FCL or LCL breakers. Not available on motor operated breakers.

CLCP-16 Special Application Moulded Case Circuit Breakers

Current Limiting Circuit Protectors Accessories

Motor Operators

Motor operators provide complete remote control by means of a pushbutton or similar pilot device. Positive switching action is accomplished by use of an operating arm engaging the breaker handle. The unit is energized momentarily to actuate the lever arm moving it to either the ON or OFF position. The control is broken by an internal cutoff switch. Means for emergency manual operation is provided.

Note: The pilot device must be maintained contact type for FB Tri-Pac, FCL mechanisms; momentary contact type for all others.

Motor operators are available with motors rated 120V AC, 208V AC, and 240V AC.

Note: AC voltage rated operators are CSA and UL listed as recognized components.

The 480V operators utilize a 120V AC motor in conjunction with a 480/240 to 120V dual voltage transformer. (On LA and larger operators, the transformer is supplied for separate mounting by the customer.)

Note: The motor operator is intended only for infrequent operation in line with CSA and UL endurance standard for moulded case circuit breakers.

For FB Tri-Pac/FCL Breakers

For LA Tri-Pac Breakers

For NB Tri-Pac Breakers

For PB Tri-Pac Breakers

Drawout Frame

These drawout frames are for use with standard 3-pole Eaton moulded case circuit breakers. They consist of two separate parts; stationary mounting frame and movable carrier frame. Slide rails are drawer-type, and a screw mechanism is used to engage or withdraw the movable carrier frame.

The drawout frames have three positions: connected, test and disconnected. The frames do not include a safety tripping interlock, or secondary contacts. These are optional items and may be ordered at additional cost.

Breakers mounted in the drawout frames can be equipped with standard breaker accessories including shunt trip, undervoltage release, auxiliary switch, alarm switch and motor operator.

Secondary Contacts

These are used to disconnect auxiliary circuits when attachments such as shunt trip or motor operator are used. Available in multiples of four contacts with a maximum of 32 contacts for the NB Tri-Pac. They must be factory mounted. Order by description as similar to stationary or moving frame and specify number of contacts required.

Standard Installation

- Order one stationary mounting frame and one movable carrier frame.
- Order breakers without terminals or rear connectors.
- Order any attachments desired (shunt trip, undervoltage release, etc.).
- Order secondary contacts as required:
 - A shunt trip, undervoltage release or alarm switch requires two contacts
 - A 1A-1B auxiliary switch requires three contacts
 - A motor operator requires a maximum of four contacts
 - Others as required

Racking Crank

A special crank to engage or withdraw the moving portion of the drawout. A standard 1/2 inch (12.7 mm) hex socket with extension can be used for this purpose.

Racking Crank

Catalogue Number

765A767G01

Cell Switches Mounted on Drawout Frames, All Ratings

Up to four switches can be provided. Order by description.

Each switch provides NO and NC contact that transfers before reaching the test position when being withdrawn, and after the test position when being racked in.

Handle mechanisms

For selection data, see Electrical Aftermarket Products and Services Catalogue CA08105001E (pages 3 - 77).

EGCB-1 Special Application Moulded Case Circuit Breakers

Engine Generator Circuit Breakers

Engine Generator Circuit Breakers

Product Description

Engine generator Special Application Moulded Case Circuit Breakers are designed specifically for application on diesel engine powered standby generators where high interrupting circuit breakers are not required. The JG through NG breakers are equipped with a special trip unit, that includes standard thermal (overload) protection and special low magnetic pickup range (FG includes a fixed thermal/magnetic pickup). The standard thermal trip unit provides overload protection conductors per the National Electric Code. The low magnetic pickup range is approximately two to five times the continuous rating and provides closer low level short circuit protection when applied on generators that have very low short circuit capacity. This combination allows the user to customize the breaker to the generator output.

Engine Generator Circuit Breakers are suitable for reverse feed applications.

Catalogue Numbering System

This information is presented only as an aid to understanding catalogue numbers. It is not to be used to build catalogue numbers for circuit breakers.

FG breakers include both line and load side terminals.

JG and KG breakers with "W" catalogue number suffix do not include any terminals.

JG, KG, LG, and NG breakers without "W" catalogue number suffix include both line and load terminals.

Contact Eaton for additional ratings and internal/external accessories.

Technical Data and Specifications

660, 690	10,000/5,000

Standards and Certifications

Engine generator Special Application Moulded Case Circuit Breakers are designed to conform with the following standards:

- Underwriters Laboratories, Inc., Standard UL 489, Special Application Moulded Case Circuit Breakers and Circuit Breaker Enclosures File E7819
- Canadian Standards Association Standard C22.2 No. 5, Service Entrance and Branch Circuit Breakers
- International Electrotechnical Commission Recommendations IEC 947-2, Circuit Breakers

Conformance with these standards satisfies most local and international codes, assuming user acceptability and simplified application.

EGCB-3 Special Application Moulded Case Circuit Breakers

Engine Generator Circuit Breakers Enclosures

Enclosure Description

Type 1 General Purpose

- Surface or Flush Mounting
- 15-1200 Ampere Range
- 600 Volts Ac, 500 Volts Dc

Type 1 enclosed breakers are designed for use in commercial buildings, apartment buildings and other areas where a general purpose enclosure is applicable. The breaker is front operable and is capable of being padlocked in either the On or Off position. Ratings through 1200 amperes are listed with CSA and Underwriters Laboratories, Inc. as approved for service entrance application. Both surface and flush mounted enclosures are available.

Type 3R Rainproof Surface Mounting

- Interchangeable Hubs (Through 400 Amperes)
- 15-1200 Ampere Range
- 600 Volts Ac, 500 Volts Dc

This general purpose outdoor service centre employs a circuit breaker inside a weatherproof sheet steel breaker enclosure to serve as a main disconnect and protective device for feeder circuits. Ratings through 1200 amperes are listed by CSA and Underwriters Laboratories, Inc. as suitable for service entrance application.

Type 12 Dustproof Surface Mounting

- No Knockouts or Other Openings
- 15-1200 Ampere Range
- 600 Volts Ac, 500 Volts Dc

The Type 12 enclosure is designed in line with specifications for special industry application where unusually severe conditions involving oil, coolant, dust and other foreign materials exist in the operating atmosphere. The handle padlocks in the Off position and the cover is interlocked with the handle mechanism to prevent opening the cover with the circuit breaker in the On position. Ratings through 1200 amperes are listed by CSA and U.L., Inc. as suitable for service entrance application.

Type 1 Surface Mounted

① Package of 3 terminals.

② Other accessories are available. Same as standard frame breakers.

Direct Current Circuit Breakers

Direct Current Circuit Breakers

Product Description

DC (direct current) systems and applications are becoming commonplace as alternative energy sources have expanded and the number of DC devices and data centres using DC power has swelled.

Eaton offers moulded case circuit breakers and switches to meet circuit protection and switching requirements for a host of different DC end use requirements. Applications include UPS battery supply circuits, solar systems and electric vehicle charging, as well as commercial and industrial distribution.

Current ratings are available from 15 to 2500A, with a full scale of voltage and interrupting ratings to address needs ranging from standard to the highest performance. Optional internal accessories provide remote tripping and indication of breaker status.

The DC breaker family is CSA C22.2 No. 5 and UL 489 listed and exceeds the requirements in UL 489 Supplement SC for UPS applications. Eaton breakers may be applied in both ungrounded and select grounded applications, with poles connected in series to operate at the maximum voltages shown on **Page DCCB-2**. To use DC circuit breakers on 600V grounded systems, three poles in series must be connected on the ungrounded leg.

The HFDDC through HMDLDC DC breakers use the same internal and external accessories as their Series C or Series G AC frame equivalents. NBDC and PBDC use the same internal and external accessories as standard NB and PB breakers.

Notes

- ① DC ratings apply to substantially non-inductive circuits. Time constants per UL 489 and CSA C22.2 No. 5.
- ② EGEDC through HMDLDC have been tested up to 300 Vdc to allow for battery charging voltages. 750 Vdc is common in transportation applications. HFDDC, four-pole 750 Vdc is available up to 150A maximum. 300 Vdc and 750 Vdc are not UL 489 and CSA C22.2 No. 5 listed voltage ratings.
- ③ Four-pole frame with two-poles connected in parallel.

See **Page DCCB-12** for series connection diagrams. Use NEC/CEC rated cable to connect/short poles in series as shown.

Moulded Case Switches

Eaton's DC moulded case switches are used in applications requiring a compact, high-capacity disconnect. They are UL 489/CSA C22.2 No. 5 listed and have automatic high instantaneous current protection. These devices do not provide overload protection.

Note

① F-Frame circuit breakers are factory sealed. Underwriters Laboratories requires that internal accessories be installed at the factory. Internal accessories are CSA/UL listed for factory installation under E7819.

One accessory can be mounted per pole, per breaker. Factory installation of accessories is available. Contact Eaton for assistance with part number configuration.

Wiring Diagrams

Series Connection Diagrams for DC Application ①②

250 Vdc Maximum—Two Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

500 Vdc or 600 Vdc Maximum—Three Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

750 Vdc Maximum—Four Poles in Series

Suitable for use on ungrounded systems, or grounded systems that have one end of load (A) connected to grounded terminal, opposite poles in series connection.

Suitable for use on ungrounded systems only.

Notes

- ① Poles in series connection is customer supplied. Use rated cable per NEC/CEC.
- ② For grounded systems, all poles in series must be connected on non-grounded terminal, with load connected to grounded terminal.

Special Application Moulded Case Circuit Breakers **E²MB-1**

E² Mining Service Breakers

E² Mining Service Breakers

E² Mining Service Breakers

Product Overview

State-of-the-art E² mining service breakers incorporate the rigid specifications and testing procedures developed by a focus group led by engineers from several large coal companies and Eaton design engineers. Additionally, the performance of these breakers was proven and verified during hundreds of hours of field testing in harsh mine environments.

E² mining breakers are available in 600 Vac and 1000Y/577 Vac. Interchangeable trip units can be used on either 600 or 1000 Vac frames.

The E² mining breaker family is designed especially for trailing cable application per MSHA 30 CFR 75. Field interchangeable electronic rms sensing trip units are available from 150 to 2000 amperes with instantaneous pickup settings conforming to the code of Federal Regulations 30 CFR 75.601-2. Electromechanical trip units are also available with a wide range of magnetic pickup ranges.

E² electronic trip units are the first to provide the mining industry with true rms sensing, made possible by the custom ASIC microprocessor in each electronic trip unit.

E² breakers are designed to be physically and electrically interchangeable with Classic Mining Service Breakers and supersede Series C[®] Mining Service Breakers. The table to the right outlines direct replacements.

E2MB-2 Special Application Moulded Case Circuit Breakers

E² Mining Service Breakers

Eaton's mining service circuit breakers provide short circuit protection as specified in the code of Federal Regulations 30 CFR 75.601-2. E² 225/400 ampere K frame and 400/600 ampere L frame electronic trip units feature specifically designed instantaneous pickup settings to conform exactly with the code of

Federal Regulations 30 CFR 75.601-2. Electromechanical trip units are also available with a wide range of magnetic pickup ranges.

The tables below list the conductor size maximum allowable circuit breaker instantaneous setting and the E² breaker that meets that setting.

Notes

- ① Contact Eaton for internal accessory voltage ratings not listed.
- ② LH (RH also available).
- ③ LH or RH.
- ④ RH only.

Classic Mining Breakers

Product Overview

Classic mining service circuit breakers continue to be manufactured and are primarily applied to achieve an exact physical and electronic replacement of previously Eaton installed Westinghouse equipment. To upgrade to the current offering of E² mining circuit breakers, consult the cross reference information on **Page CMCB-10**.

AC Interrupting Capacity, Symmetrical Amperes

60 Hz AC Volts	Breaker Type				
	KAM	LAM, MAM, NBM	HKAM	HLAM ^②	All Other 1000 Volt Breakers ^②
240	25,000	42,000	—	—	—
480	22,000	30,000	—	—	—
600	22,000	22,000	—	—	—
1000 ^①	—	—	10,000	12,000	14,000

Special DC Interrupting Capacity

Breaker Type	Maximum Ampere Rating	Interrupting Capacity (Amperes) at 300–330 Vdc			
		Single-Pole		Two Poles in Series ^④	
		0.0–0.15 mH Inductance ^③	0.15–0.5 mH Inductance	0.5–0.9 mH Inductance	2.4 mH Inductance
KAM	225	15,000	10,000	15,000	5000
LAM	400/600	15,000	10,000	15,000	5000
MAM	800	15,000	10,000	15,000	5000
NBM	1200	15,000	10,000	15,000	5000

Notes

- ① Based on circuit power factor of 50% or greater.
- ② HLAM must be rear stud connected. If front connected, interrupting capacity rating is 10,000 amperes.
- ③ Resistive circuit.
- ④ Two poles in electrical series in ungrounded leg of circuit.

Classic Circuit Breakers For Mining Service**Undervoltage Release Data**

Undervoltage releases are calibrated to pick up at 72 to 85% of rated voltage dropout between 35 to 70% of rated voltage.

Breaker Type	Volts	Line Amperes	Series Resistors ^①	Total VA
KAM, HKAM ^①	480/60	0.021	10,000	10.1
	240/60	0.019	—	4.6
	120/60	0.021	—	2.5
	120/60 ^②	0.13	—	15.6
LAM, HLAM, MAM, HMAM, NBM, HNBM ^①	480/60	0.033	12,000 ^③	15.9
	240/60	0.028	6,000	6.7
	120/60	0.029	—	3.5
	120/60 ^②	0.13	—	15.6

Shunt Trip Coil Data

Breaker Type	Volts	Amperes	VA
KAM, HKAM, LAM, HLAM, MAM, HMAM, NBM, HNBM	480/60	0.085	40.8
	240/60	1.7	408
	120/60	0.88	105.6
	48 DC	8.0	384

Notes

- ① Supplied for external customer mounting.
- ② New design electrical reset UVR.
- ③ 16,000 for Type MAM and HMAM.

Line and Load Terminal Shields ^⑤

Breaker Type	Description	Style Numbers
KAM	Line terminals	1261C93G01
	Load terminals	1262C46G01
LAM-400	Line terminals	1261C95G01
	Load terminals	1262C48G01
MAM	Line terminals	1261C97G01
	Load terminals	1261C97G02

Notes

- ① Not UL listed.
- ② 400 ampere LA studs of the same length have sufficient clearance; however, customer connections may make it necessary to use a short stud adjacent to a long stud.
- ③ 150, 300 and 400 ampere frames only.
- ④ This is a special stud that includes six contact nuts for use where bus contact nuts must be used.
- ⑤ For breakers used with terminals and cable connections. Sold in packages of 10.

CMCB-9 Special Application Moulded Case Circuit Breakers

Classic Mining Circuit Breakers

Standard Handle Reset Undervoltage Release

For Classic breakers field mountable on special frames listed on **Page CMCB-10**, or replacement on breakers originally equipped with this type UVR.

For undervoltage protection. A solenoid device mounts within breaker case. Coil must be energized before closing breaker. Trips breaker

when voltage drops below 35 to 70% of coil rating. Picks up and seals in at 72 to 85% of coil rating. For line voltages up to 250 Vdc or 600 Vac. Externally mounted resistors are supplied for certain ratings. Standard leads extend 18.00 inches (457.2 mm) outside of breaker. Longer leads may be specified.

Shunt Trips

For tripping breaker from a remote point. A solenoid device mounts within breaker case. Breaker trips when coil is energized. A cutoff switch breaks the circuit to the momentary rated coil when breaker opens. Available for

control voltages up to 250 Vdc or 600 Vac. Voltage and frequency must be specified. Standard leads extend 18.00 inches (457.2 mm) outside of breaker. Longer leads may be specified.

GFR-1 Special Application Moulded Case Circuit Breakers

Add-on Ground Fault Protection Type GFR

GFR Relay

Type GFR Ground Fault Relay

Product Description

The GFR ground fault relays, current sensors, test panels and accessory devices are CSA and UL listed. ①

A Type GFR ground fault protection system, when properly installed on a grounded electrical system, will sense phase-to-ground fault currents. When the level of fault current is in excess of the pre-selected current pickup and time delay settings, the GFR relay will initiate a trip action of a disconnect device, which will open the faulted circuit and clear the fault.

The GFR devices are CSA and UL Class I devices designed to protect electrical equipment against extensive damage from arcing ground faults.

A basic Type GFR ground fault protection system consists of a ground fault relay②, a ground fault current sensor and a disconnect device equipped with a shunt trip device. This disconnect device can be a moulded case circuit breaker, a power circuit breaker, a bolted pressure switch or other fusible disconnect device, suitable for application with CSA or UL Class I Ground Fault Sensing and Relaying equipment.

Options

Additional optional equipment can be added to the protection system to meet the requirements of the specifying engineer, including:

- Ground Fault Test Panel
- Ground Fault Warning Indicator Relay
- Ground Fault Indicating Ammeter

GFR relays are available with zone selective interlocking circuitry to interlock several relays within the same system. This allows the relay which detects a ground fault to instantly clear the fault by tripping the disconnect device. The relay simultaneously sends a signal to relay units "upstream" from the fault to time delay or to block their operation completely. Current sensors in various designs provide a range of "window" sizes to accommodate standard bus and cable arrangements.

Shunt trip attachments may be ordered for field mounting in Eaton moulded case circuit breakers, or may be ordered factory installed in the breaker.

Electrical Ratings

GFR Relay

Ground Fault Detection Ranges:
1 to 12, 5 to 60 or 100 to 1200 Amperes

Output contacts:
240 Volt, 50/60 Hz: 3.0Amperes
120 Volt, 50/60 Hz: 6.0Amperes
28 Volt Dc: 3.0Amperes
125 Volt Dc: 0.5Amperes

Control power requirements:
120 Volt, 50/60 Hz: 0.125 Amperes, or
125 Volt Dc (optional)

Sensor:

600 Volts, 50/60 Hz maximum system voltage

Typical Current Sensor

① These devices are listed with CSA under file number 43357 and UL under file number E48381.

② Suitable for either surface or semi-flush mounting.

Special Application Moulded Case Circuit Breakers **GFR-2**

Add-on Ground Fault Protection Type GFR

Product Selection

Each installation requires:

1. One relay unit (select trip ampere as required)
2. One current sensor (select configuration required)
3. One circuit breaker or disconnect device with shunt trip, or a shunt trip attachment for mounting in existing breaker.
4. Test panel. (Optional)

Instruction Leaflet Number 15321

① Suitable for either surface or semi-flush mounting.

② One end removable for installation.

③ When a mechanically reset relay is used with a test panel, both the relay and test panel must be reset following either a simulated ground fault test or actual ground fault.

④ Not CSA and UL listed.

Accessories

Test Panel (120 Volts Ac) ③

Used to test the ground fault system, to give an indication the relay has tripped the breaker, and to reset the relay after tripping④. These functions may be separately mounted pilot devices.

Optional Test Panel

Control	Test	Catalogue Number
120V 50/60 Hz	120V 50/60 Hz	GFRTP
125V Dc	120V 50/60 Hz	GFRTPD

Ground Fault Warning Indicator

This is an accessory item for use with GFR Relays with interlocking circuitry. At approximately 30-50% of the Relay pickup setting, the indicator switches separate 120 volt Ac control power to a lamp or relay, (not included) to give an indication of a ground fault. The indicator is rated 110/120 volts Ac 50/60 Hz for a maximum indicator load of .5 amperes.

Ground Fault Warning Indicator	Style Number
Manual Reset	1234C67G01
Self-Resetting	1234C67G02

Indicating Ammeter ④

The optional indicating ammeter. It connects to the sensor terminals, through a momentary contact pushbutton, and will indicate (in amperes) any ground fault current flowing through the sensor. Kit includes the ammeter and pushbutton.

GFR System Used with	Kit Style Number
1-12 Ampere	752B820G01
5-60 Ampere	752B820G02
100-1200 Ampere	752B820G03

Shunt Trip Attachments

Use 120 volt Ac shunt trips.

Face Plate

Recommended when these relays are semi-flush mounted, to close the door cutout opening.

Description	Style Number
Face Plate	752B410G01

Eaton is dedicated to ensuring that reliable, efficient and safe power is available when it's needed most. With unparalleled knowledge of electrical power management across industries, experts at Eaton deliver customized, integrated solutions to solve our customers' most critical challenges. Our focus is on delivering the right solution for the application. But, decision makers demand more than just innovative products. They turn to Eaton for an unwavering commitment to personal support that makes customer success a top priority. For more information, visit www.eaton.com.
