## CAT3 Plenum 25, 50, 100 Pair (UTP)

Vertical Cable® CAT3 Plenum Cable is ideal for voice applications and is commonly used for telephony purposes. It has fewer twists than CAT5E which makes it easier to work with when punching it down. It also has no spline divider like the CAT6 cable does. CAT3 Plenum is mandatory to use where a plenum fire rating is required. It has a Teflon jacket rather than Polyvinyl Chloride (PVC) and gives off less toxic fumes in a fire. Our CAT3 Plenum cable is high quality American-Made.

## CAT5E Solid (UTP)

CAT5E 350MHz Bulk Cable is the industry standard for data communication applications: structured cabling and computer networks as well as Ethernet. Compared to CAT3 Cable, CAT5E has more twists, which allows for less interference and better signal quality. In addition, the CAT5E allows faster networking and longer cable runs. This Vertical Cable® product exceeds the CAT5E 100MHz standard.

## CAT5E Solid (STP)

Vertical Cable® CAT5E 350MHz Shielded Cable is vital for installations in interference prone areas. In contrast to its CAT5E Unshielded counterpart, Shielded cable blocks out electromagnetic interference or EMI, which can slow down proper signal flow. EMI is caused by electrical circuits present around the cable from just about anything: elevators, power lines, electric motors, fluorescent lights, thermostats, air conditioners or microwaves.

## RG11 Standard Shield CCS

Vertical Cable® RG11 is a superior rendition of the RG6 cable. The RG11s have a smaller attenuation, or the degree at which signal quality is lost. For jobs that demand an extra fine signal over long distances, rely on the RG11. The RG11 also works with higher frequency signals (as high as 3GHz), which the RG6 cannot handle. The RG11 is used for antenna connections and HDTV receivers. This cable is twice as thick as the RG6. As in the RG6 our RG11 features a Standard Shield: (1) Aluminum Foil & (2) a 60% Aluminum Braid.

Vertical Cable® **High Strand Audio Cable** comes in various gauges, strands and number of conductors. We also offer Direct Burial High Strand Cable that withstands outdoor conditions.

The thicker gauge will allow for longer runs. Conversely, the thinner gauge will provide an economical solution for short runs. Additionally, we offer a wide variety of strand count (16 up to 105) to cater to every type of installer. The higher strand will be more flexible and easier to pull upon installation. The higher strand will also help minimize the loss of high frequencies which can occur sometimes as a result of the skin effect. Lower strand is the more economical & suitable solution for low frequency signal installations. You may choose to go with a higher number of conductors to better organize your cables all under one jacket. Whatever your preference - we have the combination of gauge, strand and conductors that is just right.

**vertical cable**

Vertical Cable® **Fire Alarm Cable** is available in FPLR (Power-Limited Fire Alarm Riser Cable) and FPLP (Power-Limited Fire Alarm Plenum Cable). Riser cables can be used in vertical runs floor to floor, and have some fire resistant characteristics. Plenum cables can be used in more fire prone ducts and other spaces where air travels; they are tested to resist the spread of fire. Both of these cables are typically housed in raceways or metal conduit. All of our alarm cables are solid, and are available in various gauges and number of conductors.

Fire Alarm Cable

Vertical Cable®'s **Security & Communication Cable** has a broad variety of applications ranging from security use to intercom to sound system use. Depending on the degree of cable flexibility you need, we provide both stranded and solid cables. Our 16 strand cable speeds up any installation because of the bendable nature of this cable, which makes it easier to pull through. Conversely, our solid cables provide an economical solution for installations. Possible cable uses for our security cable are: door controllers, prox sensors, key pads, sound systems, access control and smoke detectors.

Vertical Cable®'s **Control Cable** conveniently combines security cable and power cable together in one conduit. Save precious installation time, and better organize your cable set-up with this composite cable. We offer the Control Cable in both Plenum and non-Plenum to accommodate our buyers' needs. The Plenum version is designed to meet rigorous fire safety standards, and provides cabling solutions for fire prone areas.
