

Track lighting

Philips Lightolier track bundles innovation, flexibility and performance with ease of use.

Philips Lightolier's Lytespan Track has maintained a reputation for its commitment to excellence and innovation since its inception over 40 years ago. Designed to blend with a variety of residential and light commercial interiors, Lytespan offers lighting that is visually powerful and versatile. A wide selection of products allows Lytespan to meet virtually any lighting need while providing the optimum level of style and performance. With Lytespan, high light output and energy efficiency are not mutually exclusive.

By taking advantage of state-of-the-art light sources Lytespan can deliver powerful lighting that is extremely energy-efficient. Energy Smart, Alcyon LED, fluorescent and metal halide track fixtures such as PowerWash and Mini HID can save up to 70% of the energy consumed by ordinary incandescent fixtures while utilizing product designs that are elegant and timeless. Lytespan delivers lighting that excites while it communicates. Only from Philips Lightolier, the pioneer of track lighting.

Alcyon LED small cylinder

Lytespan LED

Designed around the finest white LEDs and thermally engineered for superior optical performance, the Alcyon LED Small Cylinder delivers light equal to most MR16 lamp sources. Available in a range of beam spreads for lighting flexibility and is dimmable.

Features

- 15W, 640* Nominal lumens
- Integrated housing heat sink: Die-cast aluminum maintains LED junction temperature for minimum 50,000 hr lifetime at 70% lumen maintenance.
- Optical assembly: Interchangeable reflectors may be changed at any time to accommodate the lighting requirements of the space.
- Integral locking: Vertical and horizontal locking preserves original lighting design intent.
- Aiming indicator: Allows a series of luminaires to be precisely set to the same aiming angle.

* +/- 5% for 3000K

LLA01 Series

Alcyon LED flood

Lytespan LED

LLF Series

Cover lens

Colorless borosilicate glass protects optical chamber and LED surfaces from dust and other contaminants.

Phosphor lens

Remote phosphor technology provides increased efficiency and color stability.

Optical chamber

Harnesses LED light and redirects through phosphor with minimal losses.

LED board

16 royal blue LEDs. Remote phosphor application minimizes performance variation.

Features

- 20W, 1000* Nominal lumens
- LED Board: Metal Core Printed Circuit board for efficient thermal management with 16 royal blue LEDs.
- Optical assembly: Remote phosphor technology provides increased efficiency and color stability. Phosphor lens assembly positioned in front of LED array converts blue light to white and produces a wide even pattern of diffused light without bright spots created by individual LEDs. Uniform phosphor coating provides consistent, stable color with a shift of no more than +/- 100K over life. High reflectance material in optical chamber harnesses led light and redirects through phosphor with minimal losses.
- Integral locking: Vertical and horizontal locking preserves original lighting design intent.
- Aiming indicator: Allows a series of luminaires to be precisely set to the same aiming angle.

Alcyon

Lytespan low voltage

Alcyon features the smallest available transformer assembly with a fully potted, rugged polycarbonate construction. The silent electronic transformer includes short-circuit and over-heat protection. Alcyon's architectural styling is clean and elegant featuring a wireless blade/stem that seems to suspend the fixture in mid-air. The unique MR16 Wall washer features an integral asymmetrical spread lens and kick reflector to create a smooth elliptical wash. Utilizing the T4 bi-pin lamp, the micro flood includes an integral Solite® patterned lens to create a soft, smooth flood of light

Features

- Infinite horizontal rotation for maximum aiming flexibility without "dead spots".
- Lamp-forward design improves access and simplifies relamping.
- Die cast aluminum construction throughout with a durable baked enamel finish.
- Captive accessory cartridge accepts two accessories and provides excellent glare control.

For Accessories see 2.164.

ProSpec cylinders

Features

- 1. Flush adapter** inserts easily into track and provides separate mechanical and electrical connection.
- 2. Lever** energizes fixture electrically by 90° rotation. Fixture cannot be mechanically engaged or disengaged when powered.
- 3. Stem:** constructed of stainless steel; 5/8" OD; .049" wall thickness.
- 4. Tru-lock** aiming mechanism allows simultaneous horizontal and vertical locking. Full tension is maintained even when braking lever is released to hold aiming position.
- 5. Finish:** all painted finishes are powder coated baked enamel.
- 6. Aiming indicator** allows precise fixture aiming.
- 7. Housing:** 20 gauge (.036") drawn steel construction. Hemmed front edge provides superior durability, additional stiffness; prevents chipping and enhances appearance.
- 8. Media cartridge** allows convenient loading and removal of up to 3 accessories without disturbing aiming adjustment. Easily installed and removed with a simple twisting motion. Constructed of formed aluminum.
- 9. Clamping wedges:** cam-operated wedges expand or release gripper springs from track ledge; gripper springs hold adapter securely within track.
- 10. Cross blade louver** extruded aluminum, 1" deep, provides additional shielding and can be easily removed.

For Accessories see page 2.164.

ProSpec line voltage

ProSpec line voltage cylinders feature a classic design that is easily integrated into various architectural environments. Each unit includes the ProSpec media cartridge which can hold up to 3 accessories and allows quick and convenient changing of filters, louvers and screens.

Accessories: AF4 lenses; ADF4 color filters; AL4 louvers; AS4 screens

Cylinders

ProSpec low voltage

Featuring a wide selection of halogen light sources, ProSpec's low voltage cylinders provide powerful, yet easily controlled light that's ideal for display environments. The PAR36 cylinder features a dual tap 5.5/12V transformer with a convenient slide switch. The PAR36 cylinder and PAR56 Stepped cylinder also feature a lamp that can be rotated from 0° to 180° and locked in place.

Features

- 1. Flush adapter** inserts easily into track and provides separate mechanical and electrical connection.
- 2. Lever** energizes fixture electrically by 90° rotation. Fixture cannot be mechanically engaged or disengaged when powered.
- 3. Stem:** constructed of stainless steel; 5/8" OD; .049" wall thickness.
- 4. Tru-lock** aiming mechanism allows simultaneous horizontal and vertical locking. Full tension is maintained even when braking lever is released to hold aiming position.
- 5. Magnetic transformer** offers reliable operation and is completely housed inside fixture.
- 6. Finish:** all painted finishes are powder coated baked enamel.
- 7. Aiming indicator** allows precise fixture aiming.
- 8. Housing:** 20 gauge (.036") drawn steel construction. Hemmed front edge provides superior durability, additional stiffness; prevents chipping and enhances appearance.
- 9. Media cartridge** allows convenient loading and removal of up to 3 accessories without disturbing aiming adjustment. Easily installed and removed with a simple twisting motion. Constructed of formed aluminum.
- 10. Clamping wedges:** cam-operated wedges expand or release gripper springs from track ledge; gripper springs hold adapter securely within track.
- 11. Cross blade louver** of extruded aluminum, 1" deep, provides additional shielding and can be easily removed.
- 12. Lamp rotation lock:** lamp can rotate from 0° to 180° and then be locked in the desired position (PAR36 only).

Wall washers

ProSpec line voltage

ProSpec wall washers feature an asymmetrical spread lens and an anodized aluminum kick reflector. To distribute light evenly from ceiling to floor. The kick reflector assembly can hold one accessory and be removed from the front for relamping. ProSpec's Tru-lock aiming mechanism allows simultaneous locking of both horizontal and vertical positions. Ring wall washers feature highly adjustable yoke mounting.

Features

- 1. Flush adapter** inserts easily into track and provides separate mechanical and electrical connection.
- 2. Lever** energizes fixture electrically by 90° rotation. Fixture cannot be mechanically engaged or disengaged when powered.
- 3. Stem:** constructed of stainless steel; 5/8" OD; .049" wall thickness.
- 4. Tru-lock** aiming mechanism allows simultaneous horizontal and vertical locking. Full tension is maintained even when braking lever is released to hold aiming position.
- 5. Finish:** all painted finishes are powder coated baked enamel.
- 6. Aiming indicator** allows precise fixture aiming.
- 7. Housing:** 20 gauge (.036") drawn steel construction.
- 8. Kick reflector assembly:** Holds one accessory behind the spread lens. Assembly can easily be removed from the front using a simple twisting motion.
- 9. Kick reflector:** Constructed of anodized aluminum. Embossed texture reflects light toward upper portion of wall and ceiling line.

For Accessories see page 2.164.

Rings

ProSpec line voltage

These line voltage units feature a clean, minimal look that's ideal for museums, lobbies and other institutional environments. Extremely versatile, they can be adjusted horizontally and vertically and then locked in place. The convenient aiming Indicator allows a series of fixtures to be accurately aimed and adjusted. These line voltage rings also include ProSpec's Media cartridge so filters, louvers and screens can be added or removed without disturbing aiming adjustment. Ring and cylinder media cartridges of the same size are completely interchangeable. A cross blade louver provides additional shielding and can be easily removed if necessary.

Features

- 1. Flush adapter** inserts easily into track and provides separate mechanical and electrical connection.
- 2. Lever** energizes fixture electrically by 90° rotation. Fixture cannot be mechanically engaged or disengaged when powered.
- 3. Stem:** constructed of stainless steel; 5/8" OD; .049" wall thickness.
- 4. Locking lever:** side lever precisely locks vertical adjustment. Top lever precisely locks horizontal adjustment.
- 5. Aiming indicator** allows precise fixture aiming.
- 6. Housing:** 20 gauge (.036") drawn steel construction. Hemmed front edge provides superior durability, additional stiffness; prevents chipping and enhances appearance.
- 7. Cross blade louver** of extruded aluminum, 1" deep, provides additional shielding and can be easily removed.
- 8. Clamping wedges:** cam-operated wedges expand or release gripper springs from track ledge; gripper springs hold adapter securely within track.
- 9. Yoke mounting** allows adjustment up to 180° vertically and 350° horizontally.
- 10. Media cartridge** allows convenient loading and removal of up to 3 accessories without disturbing aiming adjustment.
- 11. Finish:** all painted finishes are powder coated baked enamel.

ProSpec 277V Luminaires

ProSpec 277V Energy Smart

Philips Lightolier is now offering a variety of Energy Smart Lytespan track heads configured for 277V, which mount directly to ProSpec Track. These fixtures are ideal for use in large scale retail or commercial applications for accent lighting, wall washing and general illumination. PowerArc Modular is a high performance HID product available in a range of configurations for virtually any application. Mini HID uses many of the same CMH sources in a simpler, budget conscious product. Both lines offer the same punch and beauty of halogen incandescent sources with 50-70% energy savings with greatly expanded life. PowerWash and Lyteflood utilize T5HO and T5 twin tube lamps respectively to provide excellent wall washing and general lighting. Typical fluorescent sources use only 30% of the energy required for the same output of incandescent light, and last significantly longer.

Mini HID 277V

The Mini HID family combines the high performance of miniaturized ceramic metal halide lamps with compact HID electronic ballast technology in a sleek, unobtrusive design. It provides specifiers with new Energy Smart accent lighting solutions for retail and architectural applications. Mini HID from Philips Lightolier delivers more lighting for the dollar in the smallest available package.

Refer to page 2.24 for complete ordering information for 277V Mini HID.

PowerWash 277V

PowerWash T5 represents the state of the art in Energy Smart linear fluorescent wall washing and floodlighting combined with the unsurpassed flexibility of ProSpec track. Linear T5 HO (high output) lamps powered by efficient, quick-start electronic ballasts deliver 10-20% greater efficacy than comparably sized T8 lamps or biax type lamps of equal wattage. PowerWash is available in 2', 3' or 4' lengths to match T5 24W, 39W and 54W lamps respectively.

Refer to page 2.28 for complete ordering information for 277V PowerWash.

Lyteflood 277V

Dramatic impact, high efficiency, and long life make Lyteflood ideal for a host of merchandising applications. Lyteflood fixtures are especially well suited for floodlighting and wall washing and can be installed on new ProSpec track. Lytefloods utilize compact fluorescent lamps for significant energy savings, long lamp life and excellent color rendition. Quick-start electronic ballasts are standard.

Refer to page 2.29 for complete ordering information for 277V Lyteflood.

Specification track heads

Sof-Tech

Lytespan low voltage

This series of low voltage units features die-cast elements combined with silicone rubber components and a vertical electronic transformer for a sleek, compact look. Available in both open back or fully enclosed versions.

PAR36 Enclosed spot

Electronic

Cat. no.	Description
6279WH	Matte white
6279BK	Matte black

Lamping: PAR36 50W max.

Accessory holder: 7660 (holds one accessory).

Diffusion/special filters: AF3 series.

Color filters: ADF3 series.

Louwer: AL3 series.

Features

- Socket boot of heat resistant silicone rubber decoratively covers the socket of the lamp – no visible hardware shown.
- Ultra-narrow vertical electronic transformer offers a compact, close-to-track look.
- Dimming: Efficient and reliable electronic transformer provides silent dimming with Philips Lightolier "QE" dimmers.

For Accessories see 2.164.

PowerArc

Lytespan

PowerArc utilizes ceramic arc tube metal halide lamps for superior color rendering and long lamp life with minimal color shift. Carefully designed around the light source, PowerArc can save up to 70% of the energy consumed by ordinary incandescent fixtures.

Features

The PowerArc design features an ideal balance of soft curves and hard edges that integrates well with virtually any interior. Two versions of PowerArc are available; a 30° flood and an asymmetrical wall washer. The wall washer features an integral kick reflector that provides wide, even illumination over vertical surfaces.

A number of key features allow PowerArc to provide unparalleled flexibility and performance. An aiming angle indicator conveniently measured in degrees allows a series of luminaires to be precisely set to the same aiming angle. The PowerArc's protective glass lens can be slid out from either direction and uses no hinges or clips. A hidden micro-safety switch automatically de-powers the fixture during relamping for safety.

Technical information

- Excellent color rendering (82 CRI).
- Metal halide lamps provide 6,600 initial lumens with an average life of 10,000 hours.
- Provides high footcandle levels while reducing HVAC costs.
- 0–90° vertical adjustment, 375° horizontal rotation.
- All units feature electronic ballast.
- Available in matching floodlight and wall washer versions.

PowerArc

Lytespan

The PowerArc canopy mount provides crisp, powerful metal halide lighting that is ideal for both direct and indirect lighting applications. Its ability to be installed in damp locations makes it an excellent choice for atriums, covered outdoor balconies and similar locations. Whatever the environment, the PowerArc canopy mount provides a clean, unobtrusive look at the ceiling while offering excellent aiming flexibility.

Features

When mounted on the wall, it makes an ideal indirect lighting fixture. An easily attached visor provides excellent glare control.

This versatile lighting instrument is available as an asymmetrical wall washer featuring an integral kick reflector that provides wide, even illumination. Offering unrivaled power, versatility and aiming flexibility, the PowerArc canopy mount provides the crisp look of halogen lighting but with energy savings comparable to fluorescent.

A mounting bracket with rotation adjustment and locking feature allows the fixture to be conveniently hung before wiring.

Ceiling mounted installation

Shown with Visor

Wall mounted installation

- 0° to 90° vertical adjustment allows good indirect lighting no matter what the ceiling height.
- Canopy features 355° horizontal rotation and can be locked every 45°; interior positive lock creates a permanent fixed position.

Mini HID cylinders

Lytespan

Lytespan Mini HID is a powerful combination of high performance ceramic Metal halide lamps and sleek unobtrusive designs in the smallest available package. The Mini HID family includes five different lamp types including the newest 20W miniatures and a full range of PAR lamps. The 20W miniature lamps combined with the latest micro ballast technology create a powerful CMH luminaire that approaches the size of low voltage MR16.

Features

Offering up to 70% energy savings vs. incandescent spotlights with 3 to 4 times longer lamp life, Lytespan Mini HID is the choice for high-performance energy smart retail and architectural lighting.

PowerWash T5

Lytespan linear fluorescent

PowerWash T5 track mount represents the state of the art in Energy Smart linear fluorescent wall washing and flood lighting combined with the unsurpassed flexibility of Lytespan track. Linear T5 HO (high output) lamps powered by efficient quick-start electronic ballasts deliver 10–20% greater efficacy than comparably sized T8 lamps or bi-x type lamps of equal wattage.

Features

Ultra slim 5/8" diameter T5 lamps result in more precise optic control of the light, more consistent beam patterns and greater fixture spacing ratios. The narrow diameter also permits an elegant, streamlined design that's architecturally compatible with commercial and retail spaces alike and integrates well with Philips Lightolier's metal halide families.

Available in one-lamp or two-lamp configurations and in 2', 3' or 4' lengths to match T5 24W, 39W and 54W lamps respectively. PowerWash T5 is finished in subtle matte white, classic matte black, and contemporary aluminum and is compatible with Lytespan Radius, Basic and Advent two-circuit track. Additional features include 180 degrees of rotation for flexible aiming, a built-in pull-out lamp holder that allows fast, easy relamping, and an integral louver for superior cut-off and glare control. A clear acrylic lens, which complies with FDA guidelines for use in all food preparation applications, is available in 2', 3', and 4' lengths.

Lyteflood

Lytespan compact fluorescent

Dramatic impact, high efficiency, and long life make Lyteflood ideal for a host of merchandising and retrofit applications. Lyteflood fixtures are especially well-suited for floodlighting and wall washing and can be installed on existing Lytespan track. Lytefloods utilize compact fluorescent lamps for significant energy savings, long lamp life (up to 20,000 hours) and excellent color rendition. All Lytefloods come standard with electronic ballasts.

Features

- Side mount adapters for easy adjustment and aiming.
- Special locking knob maintains precise adjustment.
- Separate mechanical and electrical connection for easy and secure installation.

Style Jack

Lytespan low voltage

These elegantly styled, miniature pendants are easily customized into a variety of designs. Style Jacks can be clustered together to create a “free form” chandelier or a row of pendants that produce a “screen of light.” A complete Style Jack consists of a decorative Style Jack Shade, a Lytedrop (with a 20W or 35W halogen lamp) and a Power Jack. The shade, Lytedrop and Power Jack have separate catalog numbers and combine interchangeably. Please specify and order each separately.

How to select a Style Jack

Step 1: Choose a Style Jack shade (see page 2.30). Our variety of styles offer many choices to answer different design and architectural requirements.

Step 2: Choose a Lytedrop (see 2.31). Your choice of cable or stem. Each uses a halogen lamp (not included) and etched glass shield.

Step 3: Choose a Power Jack (see 2.34). Power Jacks are equipped with easily dimmable magnetic transformers that are thermally protected and accept any Focal Jack.

Lytedrop

Lytespan low voltage

Lytedrops support the decorative Style Jack shades and plug into Power Jacks. They enclose 20W or 35W T4 12V Bi-Pin (GY6.35) halogen lamps in an etched glass diffuser. All Lytedrops plug into the Power Jack with a locking device. The one-piece wire Lytedrops can be field-shortened and suspended from a sloped ceiling. One-piece wire Lytedrops have the look of a stem, but can be field cut without use of an accessory. The 30", 42" and 60" rigid stem Lytedrops have a concealed flex device to absorb impact if bumped. Rigid stem Lytedrops cannot be plugged together but can be field cut using a separate accessory

*A characteristic of blown glass is variation in color and sometimes even in size and shape.

Focal Jacks

Lytespan low voltage

MR16 Geostar

Geostar

Cat. no.	Description
8672WH	Matte white
8672BK	Matte black

Lamping: MR16 Bi-Pin 50W max.
Accessories: Accepts one accessory.
Framing projector: 6497.
Diffusion/special filters: AF2 series.
Color filters: ADF2 series.

How to select a Focal Jack

Step 1: Choose a Focal Jack Spotlight (see page 2.32). LyteJacks feature spotlights called Focal Jacks that plug into Power Jacks. They are easily interchangeable with the flexibility of a (plug-in) Jack system. A complete fixture consists of a Power Jack, Extender Stem (optional) and a Focal Jack spotlight. Each must be Ordered separately.

Step 2 (optional): Choose an Extender Stem (see 2.31). Select the length of stem that best suits your needs. (Focal Jacks can also be used without an Extender Stem.)

Step 3: Choose a Power Jack (see 2.34). Power Jacks are equipped with easily dimmable magnetic transformers that are thermally protected and accept any Focal Jack.

For Accessories see 2.164.

Sof-Tech MR16 ring

Sof-Tech ring

Cat. no.	Description
8675BWH	Matte white
8675BBK	Matte black

Lamping: MR16 Bi-Pin 50W max.
Accessories: Accepts one accessory.
Accessory holder: 7662.
Diffusion/special filters: AF2 series.
Color filters: ADF2 series.
Louver: AL2 series.

Sof-Tech MR16

Accessories
One color or diffusion series filter or louver plus snoot (optional). Color filters may not be used with a Snoot.

Die cast aluminum housing fully encloses lamp back and socket.

Sof-Tech

Cat. no.	Description

8622BK	Matte black

42" Stem

Cat. no.	Description
8623WH	Matte white
8623BK	Matte black

Stems can be joined (57" max)
Extender Stems cannot be used
with Lytedrops

Sloped ceiling stem

12" Stem

Cat. no.	Description
8630WH	Matte white
8630BK	Matte black

Accepts extender stems.

How to select a Focal Jack

Step 2 (optional): Choose an Extender Stem (see 2.31). Stems plug into Power Jacks and position Focal Jacks closer to the object being lighted. The 30" and 42" stems have an innovative "concealed flex" to absorb impact. One of these may be used with the 12" or 18" stem to increase the length up to 57". Plug connections are concealed. Stems can be shortened using separate accessory (see below).

Note: Stem lengths shown are overall length to the "hub" of the Focal Jack. When using two stems together, subtract 3" to get overall stem length. Extender Stems accept either Focal Jacks or another Extender Stem. Do not accept Lytedrops.

For Accessories see 2.164.

Accessory to field shorten

Accessory to field shorten Focal Jack extender stems or rigid stem Lytedrops* (Order 1 per stem)

* Not for use with Sloped Ceiling Stem.

Power Jacks

Lytespan low voltage

How to select a Focal Jack

Step 3: Choose a Power Jack. Power Jacks are equipped with electronic transformers and accept any Focal Jack. All track, surface and recessed mounted Power Jacks (except Point Power Jacks) have integral transformers available in 10W to 50W. The Point Power Jack is used with either a 75W or 225W remote transformer. All Power Jacks are UL listed.

For Accessories see 2.164.

Track Power Jack

Mounts to Lytespan Radius, Basic or Advent Track. Compact, slender design blends into track. (Not for use with pipe clamp or extension wands.)

10-50W Transformer (electronic)

Power Jack

Cat. no.	Description
8610EWH	Matte white
8610EBK	Matte black
8610EAL	Aluminum

Surface Power Jack

Mounts to a standard 4" octagon outlet box. Flat canopy and rounded transformer compartment are as small as possible.

Features

- Swivel features 315° horizontal rotation with 0°- 90° vertical adjustment.
- Swivel features built-in friction control to hold aiming adjustment.
- Shades accept up to two accessories utilizing an optional accessory holder.
- Adapter incorporates an integral aiming arm to allow easy adjustment when fixture is on Par-Tech. PARRing Shades and PAR30 bezel shades also available for use with Metallics in Natural Metal (**NM**), Dark Titanium (**TM**) Matte white (**WH**) finishes.

See Par-Tech line voltage shades, pages 2.128.

Note: For a complete unit, order an adapter plus shade (for example, 8701WH plus 8725WH).

The adapter can also be used alone without a shade if desired.

For Accessories see 2.164.

Metallics

Lytespan line voltage

Metallics incandescent lighting fixtures utilize a completely modular system to provide a range of line voltage lighting options suitable for virtually any environment. A single Metallics incandescent adapter can accept PAR 20, 30 and 38 halogen lamps while utilizing either a dome, barn door or Par-Tech shade.

Sof-Tech

Lytespan line voltage

An innovative line of halogen fixtures designed specifically for the PAR16, PAR20, PAR30, and PAR38 lamps. The minimal silhouette has the look of low voltage without the need for transformers. The marriage of die-cast aluminum components with heat-resistant silicone rubber elements results in a refined appearance. A wide silicone band surrounds the lamp ring and the socket cup is enclosed in an articulated silicone housing to provide a comfortable grip for aiming and relamping. These units are engineered to ensure cool operation over the life of the product.

PAR20 rings

- 8320WH** Matte white
 - 8320BK** Matte black
 - 8320AL** Aluminum
- PAR20 50W max.

Accessories: AF25, ADF25 or AL25 series.

 - 8416BK** Matte black
 - 8416AL** Aluminum
- PAR16 75W max.

Accessory holder: 8471
 Accessories: One AF2 diffusion, ADF2 color, or AL2 (60W max. /Accessories)

Sof-Tech ring

A die-cast aluminum ring encloses the lamp. Integral cross blade louvers provide some glare reduction and can accommodate one accessory. Lamps are slightly regressed to provide better cut-off than typically found in PAR rings.

Sof-Tech spot

Die-cast aluminum spot fully encloses the PAR16, 20 or 30 lamp. Engineered with vents for heat dissipation to ensure cool operation. Relamp from the front for easy maintenance. Optional accessory holder fits snugly into the face of the fixture and can accommodate one accessory.

Note: Sof-Tech Ring and Spots for use with short neck PAR lamps only.

For Accessories see page 2.164.

┆ Symbol indicates compatibility with extension wands, sloped ceiling adapter and clamp-on monopoint.

Tangent

Tangent

Track lighting

The smallest, most versatile line voltage track lighting system on the planet. Tangent delivers the performance and convenience of line voltage in a profile no larger than most low voltage rail systems. Ideal for commercial, retail and residential applications, Tangent may be surface mounted or suspended, in straight runs or in sweeping architectural curves. Tangent's unique design, diminutive size and strikingly clean lines redefine the state-of-the-art in line voltage track lighting. Tangent may be installed in an infinite variety of configurations. Surface mounted on ceilings or walls, or suspended from wire or stems, in straight or curved patterns. The size of low voltage, the power of line voltage, at a third the size of standard track. Tangent is the world's smallest line-voltage track lighting system.

Tangent low voltage

Track lighting

Tangent track, the smallest, most versatile line voltage track lighting system on the planet. Each Tangent luminaire is designed and constructed for superior performance, clean architectural styles and quality. Utilizing a wide variety of lamps including both line voltage (MR16 and T4) and Low voltage (MR16, AR111 and T4). Fixture options include spots, floods, adjustable suspended spots, and miniature decorative pendants.

- Tangent features the smallest available transformer assembly. The silent electronic transformer includes short-circuit and over-heat protection.
- Minimal styling, simple, easy relamping
- Infinite horizontal rotation for maximum aiming flexibility without “dead spots”.
- Die-cast aluminum construction

For accessories see page 2.164.

T4 pendant

FXT4P Silver

120V T4 Halogen G9 Base 40W Max Frosted or Clear Cable mounted, curved Suspension Truss

- Accessories:** No accessory capability

How to order mini pendants

Step 1: select the desired light source. Low voltage T4 lamps are extremely compact and bright, perfect for the smallest shades. Line voltage T4 lamps produce the same bright halogen light without a

transformer and are easily dimmable with standard incandescent dimmers.

Step 2: select the desired shade

Choose from over a dozen styles and colors of hand-blown glass and spun aluminum shades. All mini shades are compatible with both the FXG9 and FXT4 mini pendants.

FXPDT pendant adapter

For use only with pendants supplied by others, that meet the following criteria:

- Total weight of all components being attached to adapter does not exceed 2.5 lbs.
- Pendant cord type is 1/4" dia. 18 ga. 3-wire, 300V min. SVT, with .062 dia. aircraft cable, or without aircraft cable.
- Pendant is rated 120V/60Hz., .83A max, 100W max. See pages 320-321 for shade offering.

- Refer to Lytejacks page 2.30-2.31 for complete glass shade offering. Also compatible with Forecast mini shades.

Tangent surface mount track

Surface mount

Innovative side by side buss-bars minimize overall height and allow Tangent to be mounted directly to ceilings and walls without bulky stand-offs. Tangent line voltage track is rated for a full 20 amps at 120V. Tangent may be installed in an infinite variety of configurations. Surface mounted on ceilings or walls, or suspended from wire or stems, in straight or curved patterns.

Field bendable for custom configurations

Tangent may be field bent to a minimum radius of 3 feet allowing for an infinite variety of custom configurations in any application.

Bending machine

FX100

The Tangent bending tool allows Tangent surface track, suspension beam and truss to be precisely field bent down to a minimum radius of 3 feet. Scratch resistant nylon rollers are specifically designed to accept all three track profiles. Completely assembled of durable steel, requires no power. Tool clamps easily to table or work surface.

Surface mount track

- FX04** Silver Plain surface track 4'
- FX08** Silver Plain surface track 8'
- FX12** Silver Plain surface track 12'

For mounting directly to ceilings or walls. Extruded aluminum/polycarbonate construction. Includes two end caps as shown. Anchors/mounting clips not included (order separately).

Note: Surface mount anchors or clips are required a minimum of every 3 feet on surface mount track. Anchors/clips are available in packs of 5; order accordingly. Consult specification sheet #FX for installation details.

Mounting anchors

FX25 Surface mount anchors
Mounts track to hard ceilings/walls. Pack of 5 anchors with hex wrench.

FX87 Regressed-edge clips
For regressed-edge grid ceilings. Pack of 5 clips with hex wrench.

FX89 Square-edge clips
For square-edge grid ceilings. Pack of 5 clips with hex wrench.

Power feeds

FX48 Silver
Surface power feed supplies power anywhere along track. For direct wiring without a j-box.

FX61 Silver
Surface power feed from J-Box
FX61WH White
Surface power feed from j-box - white. Supplies power anywhere along track. Includes canopy cover for j-box.

FX96 Silver
Grid ceiling power feed
FX96WH White
Grid ceiling power feed
Supplies power anywhere along track.
Mounts directly to grid ceiling runners. Includes canopy cover for J-box.

Connectors

FX54 Silver
In-line connector electrical/mechanical
Connects surface track in straight runs with continuous power. Not a power feed device.

FX55 Silver
In-line connector mechanical only
Connects surface track in straight runs without continuous power. Not a power feed device.

FX53 Silver
Variable angle connector electrical/mechanical
Connects surface track to provide flexibility when creating patterns with continuous power. Not a power feed device.

FX52 Silver
Variable angle connector mechanical only
Connects surface track to provide flexibility when creating patterns with continuous power. Not a power feed device.

Surface Powertrip

FX99 Silver
Powertrip feed kit for surface track. Compatible with pld plug in breakers. Refer to page 2.163 for complete listing of breaker modules.

Tangent suspended track

Suspension beam

Crisp architectural design is ideal for suspended applications where a larger profile is desired. Tangent suspension truss Perforated truss makes a dramatic statement in suspended applications with a unique “engineered” aesthetic.

Field bendable for custom configurations

Tangent may be field bent to a minimum radius of 3 feet allowing for an infinite variety of custom configurations in any application when using tangent bending machine.

Suspension beam

FXT08 Clear anodized plain truss 8'

For suspension from cable or stem kits. Extruded aluminum/polycarbonate construction. Includes two end caps as shown. Power feed and suspension kits sold separately.

Suspension truss

- FXS04** Clear anodized plain beam track 4'
- FXS08** Clear anodized plain beam track 8'
- FXS12** Clear anodized plain beam track 12'

Connectors

FXS54 Silver

In-line connector electrical/mechanical
Connects suspension beam and truss in straight runs with continuous power. Not a power feed device.

FXS55 Silver

In-line connector mechanical only
Connects suspension beam and truss in straight runs without power. Not a power feed device.

Cable kit

FXS68 Silver

Cable suspension kit

8' adjustable stainless steel aircraft cable. Installs on hard or grid ceilings. Ceiling canopy included. For suspension only - not a power feed device.

Note: Cable Kits are required a minimum of every 6 feet on Suspended Beam or Truss track. Cable Kits include one suspension point each; order accordingly. Consult specification sheet #FXS for installation details.

Stem kit

FXS84 Silver

18" Stem suspension kit

FXS86 Silver

48" Stem suspension kit

Note: Stem Kits are required a minimum of every 6 feet on Suspended Beam or Truss track. Stem Kits include one suspension point each; order accordingly. Consult specification sheet #FXS for installation details. 1/4" diameter solid steel stems. Install on hard or grid ceilings. Ceiling canopy included. Stems may be field shortened. For suspension only - not a power feed device.

FXS53 Silver

Variable angle connector Electrical/mechanical

Connects surface track to provide flexibility when creating patterns with continuous power. Not a power feed device.

FXS52 Silver

Variable angle connector mechanical only

Connects surface track to provide flexibility when creating patterns with continuous power. Not a power feed device.

Power feed

FXS67 Silver

20A feed supplies power anywhere along track. 10' power cable may be field shortened. Includes canopy cover for J-box. For power feed only - not a suspension device.

Suspended Powertrip

FXS99 Silver

Powertrip feed kit for suspended track. Compatible with PLD plug in breakers. page 2.163 for complete listing of breaker modules.

Translite

Translite

Translite low voltage

The visual experience of light defines an interior setting. Premium product quality and product choice are the hallmarks of excellent lighting. That's why we cultivate superior low voltage lighting, luxurious fabrics and unparalleled decorative glass. Our innovative and versatile lighting products allow designers to enhance today's architectural interiors in distinctly fresh ways.

Our versatile product offering with a wide array of options gives designers and customers the flexibility to channel their creativity into stunning displays of light, texture and color. Excellent design and premium materials guarantee a long-lasting product. Translite Systems low voltage systems consistently reflect a product quality that raises the industry bar for low voltage lighting. With discreet elegance, our low voltage fixtures feature a universal system connector that allows fixtures to be used interchangeably between our different low voltage systems and a selection of canopies. The craftsmanship of Translite Systems glass is apparent when you see the skillfully mouth-blown glass layer upon layer, carefully interlaced with frit in a time-intensive process. The quality is unmistakable and the look is striking.

Basis

Translite low voltage

Basis is a versatile low voltage lighting system with clean minimal lines that complement any architectural style or interior design.

- Rigid, ideal for straight or curved designs
- Flush to ceiling or drops up to 10 feet
- Wall mount for added versatility

Basis Track – Microspot E fixture – Caesars Palace – Las Vegas, NV
Photographer: Andy Ahart

Basis Track - Microspot D fixture - Reno NV

Basis Track - Retro 16 fixture - Kips Bay Theater - New York, NY

Designing a Basis track system

Step 1. Establishing lighting priorities

When designing a Basis track system it is important to determine the key elements that you want to illuminate. Paintings, sculptures and displays require accent lighting to make them stand out. Wall surfaces react differently with varied lighting techniques. For example, mounting fixtures very close to a vertical surface—a technique called grazing—will bring forth the texture of a surface, such as masonry. Whereas fixtures mounted farther away from a wall—a technique called washing—will subdue the texture of the surface. When designing your Basis track system, it is also important to harmonize the track lighting with other light sources that may be used in your space. Working with a few basic lighting concepts will ensure that the Basis track system fulfills your lighting requirements.

Step 2. Creating your optimal design

Architecture defines how light is diffused and how the Basis track system will be installed. Vaulted ceilings with open beams and trusses will require a different lighting configuration than the modern office space of glass and brushed metal surfaces. Basis track is a versatile lighting system with clean, minimal lines that can complement any architectural style and interior design. Basis track may be suspended from ceiling or wall surfaces. Use the track for long, linear runs or have the factory bend the track into intricate curves and complicated

architectural shapes. Basis track allows you to create a completely custom installation with standard components and your vivid imagination. Take a look at the following pages to find the different hardware options available for mounting and building a Basis track system.

Step 3. Putting your ideas on paper

The easiest way to design a new system is to do a quick sketch. Taking into consideration your lighting priorities and the architecture of the space you would like to illuminate, sketch out a rough drawing of how you would like the track to look and where you would like to put the fixtures. This simple exercise will ensure that your design provides the style and the lighting you require.

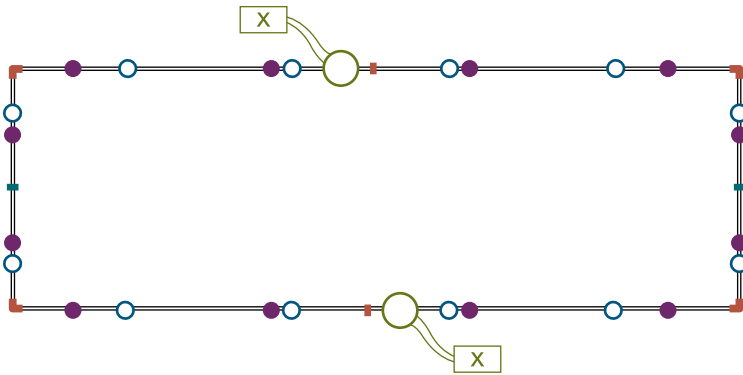

Step 4. Selecting your fixtures

Basis track fixtures do not simply illuminate your space, but allow you to accentuate the architectural features and character of your space. Prospective jobs become easels for the creation of stunning compositions of light, texture and color. Refer to our low voltage fixtures section to peruse the wide selection of elegant hand blown glass, fabric and precision machined metal fixtures that make Translite Systems well known for distinctive lighting.

Factory bendable basis track (BT-505)

- Aluminum, Polished nickel, Rubbed bronze, white or Gloss black: Conductors constructed of extruded aluminum. Spans up to 48" between supports.
- Rubbed bronze: Conductors constructed of solid brass with an elegant bronze finish. Spans up to 24" between supports.
- Square tube construction; field cuttable.
- Available in 4' or 8' lengths.
- Field bendable with bending tool (TS-BND).
- Rated for 300 watts at 12 volts and 600 watts at 24 volts.
- AL, GB, PN, WH mount every 48" and RB mounts every 24".
- Refer to box below to estimate curved runs. Bendable at factory to as small as an 18" radius.
- Note: White track is painted on sides only

Color

BK WH
Black White

End cap (BT-808-XX)

Black or white decorative cap covers the ends of Basis track and provides a clean elegant finish to the end of a track run.

Ordering code

Basis track bending tool (TS-BND)

Metal crank assembly with plastic rollers designed for bending Basis track. Protective padding protects mounting surface. Use of the bending tool to bend track is done at the discretion of the user. Translite Systems does not warranty track bent in the field.

Basis bending instructions

Field bending

Whereas field bending is good for small runs with a simple bend, more complicated architectural shapes should be bent by the factory.

Factory bending

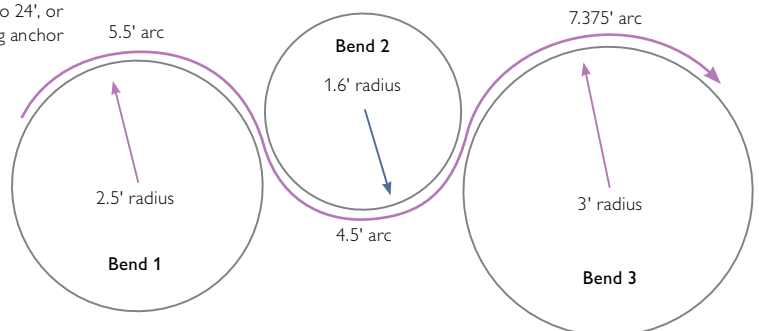

For factory bends of more than one radius, all orders or requests for quotations must be accompanied by a full size template or electronic drawing that details both the radius and arc length of all curves. Determine total length of track needed, ordering in 4' and 8' increments. For example, a circle with a radius of 2.5' (5' diameter) would require track to make a circle with a circumference of $\pi \times \text{diameter}$ ($3.14 \times 5'$) or 15.7' circumference. Add 25%: $15.7' \times 1.25 = 19.25'$ of usable track which rounds to 24', or four 8'. Specify enough couplers for each track connection. Order a mounting anchor for the apex of each curve (to secure bend).

Example

Bending the curve illustrated below would require:

- Bend 1: 5.5' track \times 1.25 = 6.875' (order one 8' length)
- Bend 2: 4.5' track \times 1.25 = 5.625' (order one 8' length)
- Bend 3: 7.375' track \times 1.25 = 9.21' (order one 8' length & one 4' length)

Total order: 28 feet of track (three 8' lengths & one 4' length)

Mounting hardware

Basis

Ceiling anchor (BT-311)

Used to anchor Basis track. (AL, GB, PN, WH mount every 48" and RB mounts every 24") Not for use with BT-526. Supplied with isolating washer.

Liana

Translite low voltage

Liana is an ultra thin, flexible low voltage track system with a low profile, ribbon-like appearance that easily molds to your creative vision.

- Flexible, ideal for field bending
- Hand-bendable, no tools necessary
- Adaptable to on the spot design decisions

Designing a Liana track system

Step 1. Establishing lighting priorities

When designing a Liana track system it is important to determine the key elements that you want to illuminate. Paintings, sculptures and displays require accent lighting to make them stand out. Wall surfaces react differently with varied lighting techniques. For example, mounting fixtures very close to a vertical surface—a technique called grazing—will bring forth the texture of a surface, such as masonry. Whereas fixtures mounted further away from a wall—a technique called washing—will subdue the texture of the surface. When designing your Liana track system, it is also important to harmonize the track lighting with other light sources that may be used in your space. Working with a few basic lighting concepts will ensure that the Liana track system fulfills your lighting requirements.

Step 2. Creating your optimal design

Architecture defines how light is diffused and how the Liana track system will be installed. Vaulted ceilings with open beams and trusses will require a different lighting configuration than the modern office space of glass and brushed metal surfaces. Liana track's small size (0.2" x 0.4") brings minimal lines and refined elegance to each architectural setting. Liana track is extremely elastic and bends easily in the field to form intricate curves and complicated architectural

shapes. No factory bending necessary! Liana track allows you to create a completely custom installation with standard components and your vivid imagination. Take a look at the following pages to find the different hardware options available for mounting and building a Liana track system.

Step 3. Putting your ideas on paper

The easiest way to design a new system is to do a quick sketch. Taking into consideration your lighting priorities and the architecture of the space you would like to illuminate, sketch out a rough drawing of how you would like the track to look and where you would like to put the fixtures. This simple exercise will ensure that your design provides the style and the lighting you require.

Step 4. Selecting your fixtures

Liana track fixtures do not simply illuminate your space, but allow you to accentuate the architectural features and character of your space. Prospective jobs become easels for the creation of stunning compositions of light, texture and color. Refer to our Low Voltage Fixtures section to peruse the wide selection of elegant hand blown glass, fabric and precision machined metal fixtures that make Translite Systems well known for distinctive lighting.

Cable

Translite low voltage

Cable's simple, uncluttered lines disappear in space – fixtures seem to float in midair.

- Wall to wall mounting
- No ceiling anchors necessary up to 35 feet
- Ideal for vaulted or ornate spaces with no ceiling access

Cable Track – Double Dip fixture

Designing a cable system

Step 1. Establishing lighting priorities

When designing a Cable system it is important to determine the key elements that you want to illuminate. Paintings, sculptures and displays require accent lighting to make them stand out. Wall surfaces react differently with varied lighting techniques. For example, mounting fixtures very close to a vertical surface—a technique called grazing—will bring forth the texture of a surface, such as masonry. Whereas fixtures mounted farther away from a wall—a technique called washing—will subdue the texture of the surface. When designing your Cable system, it is also important to harmonize the track lighting with other light sources that may be used in your space. Working with a few basic lighting concepts will ensure that the Cable system fulfills your lighting requirements.

Step 2. Creating your optimal design

Architecture defines how light is diffused and how the Cable system will be installed. Vaulted ceilings with open beams and trusses will require a different lighting configuration than the modern office space of glass and brushed metal surfaces. Cable is a classic low voltage track system that has maintained its popularity throughout the years and offers a wide variety of installation styles. With its capacity to span up to 30 feet between supports, cable fixtures give

the appearance of hovering effortlessly in midair. Cable allows you to create a completely custom installation with standard components and your vivid imagination. Take a look at the following pages to find the different hardware options available for mounting and building a Cable system.

Step 3. Putting your ideas on paper

The easiest way to design a new system is to do a quick sketch. Taking into consideration your lighting priorities and the architecture of the space you would like to illuminate, sketch out a rough drawing of how you would like the track to look and where you would like to put the fixtures. This simple exercise will ensure that your design provides the style and the lighting you require.

Step 4. Selecting your fixtures

Cable fixtures do not simply illuminate your space, but allow you to accentuate the architectural features and character of your space. Prospective jobs become easels for the creation of stunning compositions of light, texture and color. Refer to our Low Voltage Fixtures section to peruse the wide selection of elegant hand blown glass and precision machined metal fixtures that make Translite Systems well known for distinctive lighting.

Ceiling turnbuckle pair (CA-317)

Turnbuckles for Cable. Not field adjustable.

Note: Use isolating plates CA-812-2 when mounting anchors to metal surface.

Mounting hardware

Cable

Heavy duty ceiling bracket pair (CA-523)

Allows Cable to begin span 12", 18", 24", or 30" off mounting surface. Power can be fed into the base of the anchor to energize the system.
Note: Use isolating plates CA-814-2 when mounting anchors to metal surface. Consult NEC codes.

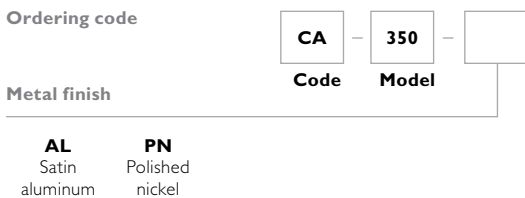

Heavy duty ceiling bracket turnbuckle pair (CA-525)

Allows Cable to begin span 12" off mounting surface. Turnbuckles provide additional tension. May not be used as a power feed.
Note: Use isolating plates CA-814-2 when mounting anchors to metal surface. See diagram, below right.
Consult NEC codes.

Directional ceiling bracket pair (CA-340)

Allows Cable to change directions on the plane parallel to the mounting surface. Typically ceiling mounted.
Note: Use isolating plates CA-812-2 when mounting anchors to metal surface.

Directional ceiling bracket wand (CA-350)

Allows Cable to change directions. Includes Turnbuckle and 36" of Cable. Allows cable to begin span 6" from surface. Does not need isolating plates when mounted to a metal surface.

Twin Rail

Translite low voltage

Twin Rail is a rigid decorative low voltage track system of parallel lines that enhance interiors with straight runs, curved designs, or concentric circles.

- Factory bendable for curved applications
- Maintains the slim appearance of cable
- A decorative enhancement for interiors

Twin Rail - Pippa pendant - San Francisco, CA

Designing a Twin Rail system

Step 1. Establishing lighting priorities

When designing a Twin Rail system, it is important to determine the key elements that you want to illuminate. Paintings, sculptures and displays require accent lighting to make them stand out. Wall surfaces react differently with varied lighting techniques. For example, mounting fixtures very close to a vertical surface—a technique called grazing—will bring forth the texture of a surface, such as masonry. Whereas fixtures mounted farther away from a wall—a technique called washing—will subdue the texture of the surface. When designing your Twin Rail system, it is also important to harmonize the track lighting with other light sources that may be used in your space. Working with a few basic lighting concepts will ensure that the Twin Rail system fulfills your lighting requirements.

Step 2. Creating your optimal design

Architecture defines how light is diffused and how the Twin Rail system will be installed. Vaulted ceilings with open beams and trusses will require a different lighting configuration than the modern office space of glass and brushed metal surfaces. Twin Rail offers the classic appearance of a low voltage cable suspension system with an inherent rigidity that allows for bending. Twin Rail may be suspended from ceiling or wall surfaces. Use Twin Rail for linear and angled runs or have the factory bend the dual conductors into intricate curves and complicated architectural shapes. Twin Rail allows you to create a completely custom installation with standard components and your vivid imagination. Take a look at the following pages to find the different hardware options available for mounting and building a Twin Rail system.

Step 3. Putting your ideas on paper

The easiest way to design a new system is to do a quick sketch. Taking into consideration your lighting priorities and the architecture of the space you would like to illuminate, sketch out a rough drawing of how you would like the track to look and where you would like to put the fixtures. This simple exercise will ensure that your design provides the style and the lighting you require.

Step 4. Selecting your fixtures

Twin Rail fixtures do not simply illuminate your space, but allow you to accentuate the architectural features and character of your space. Prospective jobs become easels for the creation of stunning compositions of light, texture and color. Refer to our Low Voltage Fixtures section to peruse the wide selection of elegant hand blown glass, fabric and precision machined metal fixtures that make Translite Systems well known for distinctive lighting.

Monopoints

Translite low voltage

Creative harmony with interchangeable components.

Transjack. Select a canopy. Select a fixture. Ultimate interchangeability.

Translite's selection of monopoints feature Transjack, a seamless connector that allows you to select a variety of pendants and adjustable fixtures to create the perfect fixture and canopy combination for your application.

Low voltage Monopoint canopies

Ceiling applications

Welcome to Transjack and welcome to versatility!

Our monopoints use the Transjack Connector. Transjack allows Translite Systems low voltage fixtures to be used interchangeably with several monopoint canopies in both wall and ceiling applications. The steps are easy.

1. Choose a canopy. Size and finish vary. Choose a transformer option that is compatible with your lamp type.
2. Choose from 50 different fixtures (metal, fabric or glass) and select “NS” as your system option. The fixture comes complete with a Transjack connector.
3. Canopy and fixture are easily assembled in the field by simply snapping the Transjack connector in place and tightening by hand.

Single canopy (MPT1A)
4.75" Round Canopy. Mounts to a standard 4" octagonal junction box (by others). For use with one Transjack enabled fixture. Fixture not included.

Low voltage Monopoint canopies

2" Canopy - new construction

The 2" inch canopy features fine details, quality engineering and minimalist lines. Compatible with ceiling or wall thickness up to 1.88" thick. Each 2" canopy consists of two separately ordered components: the 2" Canopy Housing and the 2" Canopy Trim. Fixture not included.

2" Canopy housing and trim (MPT1-S-H)

- For ceiling and wall applications, perfect for commercial and residential applications
- Compatible with ceiling or wall thickness up to 1.88" thick
- Bar hanger provides quick installation in suspended grid ceilings
- Remote or integral transformer
- Serviceable from below ceiling
- Features Transjack connector with 24kt locking pin and sleeve connector
- UL listed for direct contact with insulation
- UL certified for through branch circuit wiring

Transjack

MR16 Open downlight

All Translite Systems low voltage fixtures and pendants are represented by an approximate overall length in the ordering code. Overall length is measured from the bottom of the track or monopoint to the bottom of the fixture or pendant. To calculate the exact distance from the bottom of the track to the bottom of the fixture, add the measurement of the system connector to the length of the fixture (not required for monopoints).

Transjack system connectors

Transjack is a universal connector that allows Translite Systems fixtures to be used interchangeably among our low voltage systems. Transjack system connector may be ordered with the fixture or separately.

- To order a fixture with a Transjack system connector, simply include the track system as part of the fixture ordering code. The Transjack system connector will be included with the fixture.
- To order a standalone fixture without a system connector, specify "NS" as your system option.

Transjack double connector

Step 1 – Order double connector

Step 2 – Order fixtures with Standard Length (ST) and No System Connector (NS)

Step 3 – Attach fixtures to double connector

- The Transjack double connector allows two Transjack compatible fixtures to be mounted at a single point on any system or monopoint.
- Full articulation on both fixtures.

1. Specify a system option for the double connector or select "NS" to mount to a monopoint.¹
2. Select the two fixtures of your choice and specify "NS" for No System Connector. Your fixtures jack directly into the Double Connector.²

1. When mounting to a Monopoint, check wattage load.
2. Fixtures mounted to TJ-DC must be standard length (ST). Not recommended for wall applications. Consult factory for variations.

Gallery series

The Translite Systems Gallery series features a modular fixture design that accommodates MR-16 and AR111 lamps with a wide array of features and an extensive selection of accessories. Combining a sophisticated design, precision engineering and practical functionality, the Translite Systems Gallery Series is the system of choice for any lighting display or exhibit.

Fully featured Gallery capabilities in a modern diminutive fixture

Innovative convection cooling chambers increase air flow and reduce fixture temperature

Aim and lock position with single knob 180° vertical pivot and 360° horizontal rotation

Twist and lock tab

• Rotate and lock up to 3 lens accessories and 1 snoot accessory in place

• Relamp without disrupting aim

Toolless twist and lock lamp holder

Gallery 16 open back

- Precision machined gallery fixture with single knob vertical and horizontal locking
- 180° vertical pivot and 360° horizontal rotation
- Keyed accessories
- Low voltage MR-16 lamp up to 50 watts (not included)
- Toolless relamping without disrupting aiming
- UL and CUL Listed

Gallery series

The Translite Systems Gallery series combines a sleek, minimal design and gallery functionality into a low voltage fixture that is compatible with any of Translite Systems' low voltage systems and monopoints. The Gallery Series is based upon a single gimbal that accommodates numerous combinations of modular accessories for both MR-16 and AR111 lamps. The graphic below illustrates the extensive offering of accessories available for Translite Systems' low voltage Gallery fixture. Translite Systems' Gallery fixture is a keyed assembly that snaps easily in place without the use of tools. Gallery fixtures can be altered on the spot as exhibits evolve and lighting needs change.

Transformers reference & technical

Premium quality, feature-rich transformers to fit

Selecting a transformer

All open conductor low voltage lighting systems require a transformer. A transformer reduces the input voltage of 120/277 volts to safe-to-touch 12 or 24 volts. The total wattage of a low voltage lighting system is determined by the output wattage of the transformer. For example, a 300 watt transformer can power up to six 50 watt heads ($6 \times 50 = 300$). Transformers are available in a variety of types, sizes and mounting styles to meet your specification.

Magnetic vs. electronic transformers

Magnetic transformers are known for their reliability and ease of dimming. All Translite Systems magnetic transformers are supplied with a breaker in case of a short circuit. Electronic transformers are smaller and lighter than magnetic transformers and have the added advantage of an auto-reset feature in case of a short circuit. Electronic transformers auto-reset feature allows them to be reset from the wall switch.

Remote transformer selection

Remote mounting the transformer provides a clean minimalist look that will not detract from the beauty of the space. Also, remote mounting the transformer is the only way to guarantee a noise free installation. The transformer should be installed in an accessible remote location such as a closet. Once the transformer is installed, electrical wire is used to connect the transformer to a power feed canopy or power bolts. Using the correct gauge wire to connect the transformer to the track is essential for providing the desired voltage at the fixture. The wire gauge used to supply power to the track should be sized according to the distance between the transformer and the track. (See Voltage drop chart, below.)

Decorative surface mount transformer selection

Decorative surface mount transformers are the perfect solution for remodel applications or when there is not an accessible location to remote mount a transformer. Surface mount transformers mount to a junction box in the wall or ceiling and should be located either directly under the track or within a few feet of the track. The power feed connector for the track system is supplied with the surface mount transformer.

Dimming

Dimming a low voltage transformer may cause voltage drop even when the dimmer is set at full output. Lower voltage from the transformer results in less light output from the fixtures. Most Translite Systems magnetic transformers are supplied with a secondary tap to compensate for possible voltage drop when using a dimmer. Use a magnetic low voltage dimmer for magnetic transformers and an electronic low voltage dimmer for electronic transformers.

All of our transformers comply with guidelines established by the National Electrical Code, with a maximum wattage on a 12 volt system at 300 watts per feed and maximum wattage on a 24 volt system at 600 watts per feed. Voltages are approximate and variations will occur depending upon the load, primary input voltage, and resistance of the system's component parts. Not applicable for AC electronic transformers. Number of Lamps x Lamp Wattage = Total Wattage (300W maximum per 25A breaker)

Remote transformers

50, 100, 150, 300 or 600 watt remote mount magnetic transformer (TSQ50, TSQ100, TSQ150, TSQ300, TSQ600)

- Single 120v input with single 50 watt (TSQ50), single 100 watt (TSQ100), single 150 watt (TSQ150), single 300 watt (TSQ300), or dual 300 watt (TSQ600) low voltage 12v output
- Remote mount transformer must be installed in any vertical or horizontal orientation in an accessible area
- May be fully loaded for designated wattage
- Manufactured by Q-Tran specifically for low voltage lighting systems
- Dual primary taps are provided to compensate for voltage drop occurring from dimming or long wire leads from remote location. Refer to voltage drop chart for wiring information on page 2.131.
- Compatible with low voltage magnetic dimmers
- Choke or (debuzzing coil) is provided for quiet operation
- A primary auto-reset thermal circuit breaker protects the transformer from overloads
- Fast acting circuit breaker on each secondary output provides protection against short circuit (15 amp for TSQ150; 25 amp for TSQ300/600)

Note: Consult factory for 24 volt options.

Dual input / dual output 600 watt remote mount magnetic transformer (TSQ2X300)

- Dual 120v inputs with dual 300 watt low voltage 12v outputs
- Remote mount transformer must be installed in any vertical or horizontal orientation in an accessible area
- May be fully loaded for 300 watts per circuit
- Manufactured by Q-Tran specifically for low voltage lighting systems
- Dual primary taps are provided to compensate for voltage drop occurring from dimming or long wire leads from remote location. Refer to voltage drop chart for wiring information on page 2.131.
- Compatible with low voltage magnetic dimmers
- Choke or (debuzzing coil) is provided for quiet operation
- A primary auto-reset thermal circuit breaker protects the transformer from overloads
- Fast acting 25 amp circuit breaker on each secondary output provides protection against short circuit

Note: Consult factory for 24 volt options.

300 watt remote or surface mount magnetic transformer (PS6)

- Single 120v input with single 300 watt low voltage 12v output
- Transformer may be installed in any orientation in an accessible area
- May be fully loaded for 300 watts
- Single primary tap design. Refer to voltage drop chart for wiring information on page 2.131.
- Compatible with low voltage magnetic dimmers
- Choke or (debuzzing coil) is provided for quiet operation
- Fast acting 25 amp circuit breaker on secondary output provides protection against short circuit

Features

- Efficient and reliable electronic transformer provides silent dimming with Philips Lightolier "QE" dimmers.
- Compatible with Philips Lightolier "VA" dimmers if derated 50%.
- Painted finishes include: matte white, matte black and metallic aluminum (some models).

Miniforms

Lytespan low voltage

Miniforms combine miniature size and miniature transformer design for a clean approach to accent lighting. The compact, contemporary forms incorporate a vertical electronic transformer for stylish, yet economical, accent lighting.

Accessories: Accepts two accessories.

Diffusion/special filters: AF4 series.

Color filters: ADF4 series.

Louvers: AL4 series.

PAR36 lamps can be either halogen or conventional incandescent. A larger reflector, lens and filament shield produce a precise and smooth beam without glare.

Geostar

Lytespan low voltage

MR16 Bi-Pin lamps are small, reflectorized halogen sources with a bi-pin base. Most have a dichroic reflector which allows heat to escape through the back to significantly reduce the warmth of the light beam.

MR16 Geostar vertical

Framing projector: 6497.

Diffusion/special filters: AF2 series.

Color filters: ADF2 series.

Noise and low voltage fixtures

There is some noise produced by magnetic low voltage fixtures, especially when dimmed. This noise can be audible depending on the level of background noise and the absorbency of surrounding surfaces. We do not recommend the use of dimmed magnetic low voltage fixtures in very quiet environments such as private homes and galleries.

Par-Tech

Lytespan line voltage

Lytespan's Par-Tech delivers high impact lighting by combining compact halogen light sources with a versatile and adaptable line of fixtures. Designed specifically for the PAR16, PAR20, PAR30, and PAR38 lamps, their crisp, white light creates the dramatic effects of low voltage lighting without the need for transformers. The complete Par-Tech offering includes two unique adapters, twist-on shades, and accessories.

Low Profile

The compact, sculptural style of Low Profile Par-Tech is perfect for tight spaces such as troughs or other architectural enclosures. Par-Tech fixtures are ruggedly constructed of die-cast aluminum and vented for cool operation. Accessory holder is required when accessories such as spread lenses, color filters or louvers are being used. For Accessories see page 2.8.

Adjustable low profile adapter

- 8201AWH** PAR16, 75W max.
- 8201ABK** PAR20, 50W max.

Lasso

Lytespan line voltage

A striking combination of miniature size, halogen light and elegant style. This unique Lytespot is formed from sturdy chrome-plated steel and joined to an adjustable die-cast aluminum adapter. Provides crisp, white halogen light with a choice of PAR20, PAR30, or PAR38 lamps. Produces the distinctive white light of low voltage without the need for transformers. The lamp fits snugly into a resilient silicone collar that traps spill light. Accessories include hex cell louver, spread lens, beam smoother, barn doors and color filters.

Theatrical Lytespots

Influenced by the aesthetics of stage lighting, Theatrical Lytespots combine dramatic style with affordability. Line voltage styles are designed around the proportions of the PAR30 lamp but can use a PAR38 lamp as well. An external accessory holder is not required for these Lytespots making them an extraordinary value. One unit has an integral barn door and the other unit features an integral accessory cartridge that can accommodate up to 2 accessories -simultaneously. For accessories see pages 2.8.

Dramalux

Lytespan line voltage

When it comes to lighting galleries, museums, institutions and large retail interiors, Dramalux offers the perfect blend of performance, flexibility and durability. Each fixture can produce a wide range of lighting effects thanks to integral spring clips that support accessories such as color filters, spread lenses, louvers and barn doors. Easy "back door" access permits lamp changes without disturbing the accessories. The Dramalux wall washer, creates special light distributions in housings that are coordinated with the core, Line voltage Dramalux Lytespots. The Dramalux family of products can solve the most demanding lighting problems while maintaining a consistent aesthetic.

For accessories see pages 2.8.

Traditionals

Lytespan line voltage

For style, quality and value, nothing outperforms Philips Lightolier's Traditional series. These popular Lytespots come in a variety of shapes and sizes and feature crisply defined contours, concealed fasteners and dressed and concealed wiring. The Traditional series provides maximum value at reasonable cost.

Economical spotlights that provide a strong punch of accent light. Feature a compression molded, matte black step baffle to minimize glare. Lamp is regressed to provide shielding. For accessories see pages 2.8.

Radius, Basic, Advent

Radius, Basic and Advent

Lytespan line voltage

Basic one-circuit track and Advent two-circuit track offer an incredibly flexible system built around three separate track options – Individual, Joiner and Plain – so you can choose exactly what is required for the job. Their “H” beam construction provides maximum rigidity whether surface, pendant or recessed mounted. Our U-shaped conductor also provides superior surface contact with the fixture and power feed connectors.

Lytespan's Suspension Beam housings enclose Basic and Advent track sections and provide a sturdy profile whether suspended on stems or cables.

Radius track, a sleek and streamlined look that blends easily into any ceiling. And like all Lytespan track, it can accompany any Philips Lightolier Lytespot ever built.

Philips Lightolier's three-year warranty assures that each and every Lytespan track product meets your tough standards. It's what you would expect from Philips Lightolier – the company that pioneered track lighting.

Radius

Lytespan - Track

Radius is sleek and streamlined, with a soft, rounded style that blends easily into any decor. Its slim and compact dimensions allow it to virtually disappear into the space. Economical, versatile and elegant, Radius truly sets a new standard in track. Radius is a single circuit track with a capacity of 20 amps at 120V per branch circuit. It can be either surface or stem mounted and used in continuous runs or patterns. Radius can also be field cut. For more detailed information see application guide, page 2.158.

Lytespan - Track

Basic one-circuit track

Basic Lytespan track can be mounted in a variety of surface or stem patterns, installed vertically or horizontally on walls, and be cut in the field. Basic track can also be used with suspension beam or recessed housings. Capacity is 20 amps at 120V per branch circuit. For straight runs, order one 2-foot, 4-foot or 8-foot Individual Track section and as many 8-foot Joiner Track sections as required including each straight run of track between intercepts. For added convenience and economy, plain track can be used in place of individual track in applications not requiring a live-end, such as for patterns.

Advent one or two-circuit track

Advent can be mounted in a variety of surface or stem patterns, installed vertically or horizontally on walls, and be cut in the field. Advent can also be used with Suspension Beam or Recessed Housings. Total track capacity is 40 amps when supplied by a 120/240V three-wire branch circuit. A choice of power feeds is available, all of which allow a variety of configurations powered at any point. For straight runs, order one 4-foot or 8-foot Individual Track section plus as many 8-foot Joiner Track sections as required including each straight run of track between intercepts. For added convenience and economy, Plain Track can be used in place of Individual Track in applications not requiring a live end such as with patterns.

Note: Philips Lightolier does not recommend dimming of circuits with shared neutrals.

For more detailed information see application guide, page 2.3.

Lytespan - Track

Basic one-circuit track

Basic Lytespan track can be mounted in a variety of surface or stem patterns, installed vertically or horizontally on walls, and be cut in the field. Basic track can also be used with suspension beam or recessed housings. Capacity is 20 amps at 120v per branch circuit. For straight runs, order one 2-foot, 4-foot or 8-foot individual track section and as many 8-foot joiner sections as required including each straight run of track between intercepts. For added convenience and economy, plain track can be used in place of individual track in applications not requiring a live-end, such as for patterns.

Advent one or two-circuit track

Advent can be mounted in a variety of surface or stem patterns, installed vertically or horizontally on walls, and be cut in the field. Advent can also be used with suspension beam or recessed housings. Total track capacity is 40 amps when supplied by a 120/240v three-wire branch circuit. A choice of power feeds is available, all of which allow a variety of configurations powered at any point. For straight runs, order one 4-foot or 8-foot individual track section plus as many 8-foot joiner track sections as required including each straight run of track between intercepts. For added convenience and economy, plain track can be used in place of individual track in applications not requiring a live end such as with patterns.

Note: Philips Lightolier does not recommend dimming of circuits with shared neutrals.

Stem mounting

Use two stems for a 4-foot single track; 3 stems for a 8-foot and 12-foot single track. Stems attach to the track at any point, and may be spaced up to 4' apart in a run of track. Stems may be cut in the field. The 48" Stem Extension Kit is used to extend stem length and may not be field cut. Canopy diameter: 4 1/2", Stem diameter: 1/2".

Note: Systems can not be mounted directly to track connectors.

For more detailed information see application guide, page 2.3.

Can be clamped on pipe up to 2" diameter, comes with 8' cord and plug. Can be used with all fixtures listed with this symbol.

- 6196WH** Matte white
- 6196BK** Matte black

Suspension beam

Lytespan track housings

Rugged extruded aluminum Suspension Beam housings which enclose Basic or Advent Track sections provide a sturdy profile. It requires a minimum of support when suspended on rigid stems or slender, flexible, almost invisible cables which can be spaced up to 8' apart. "L" intercept allows 90° patterns. Can be field cut.

Note: Cables recommended for patterns only.

Order Basic or Advent track separately. For patterns, order one 4' or 8' Individual track section and as many 8' joiner track sections as required for each straight run of track between intercepts. In patterns, plan power feed at "L" intercepts.

For more detailed information see application guide, page 2.91.

6467WH (Set of 2)

Recessed track

Lytespan track housings

Recessed extruded aluminum housing encloses Basic or Advent track, sold separately, for a clean ceiling. Housing has minimum-width trim flange for use with all ceiling materials and can be field-cut to length. Recessed track is fed from splice box installed at the end of, or between housings. Electrical connector kit connects track sections through "L", "T", and "X". Ceiling Material should not protrude below the flange of the recessed housing to ensure proper installation of Lytespots.

Recessed housing intercepts

In patterns, power can be fed at "L", "T" or "X" Splice Box. Order electrical connector kit for each splice box for power feed or power continuity. Order one 4' or 8' Individual Track section and as many 8' Joiner Track sections as required for each straight run of track between intercepts.

For more detailed information see application guide, page 2.10.

Recessed track end splice box

Recessed track

Recessed track in straight runs is fed from end splice box installed at the end of or between 4' or 8' housings.

Included with 4' and 8' Recessed housing (with screws).
56407

Recessed spline box end (flange type)

Included with 7517, 7690, 7691, 7692 housings.
56409

Radius

Lytespan - track application guide

Radius Track is available in 2', 4', 6' and 8' lengths. It may be cut in the field. Toggle bolts and nylon insulators, supplied, mount the track to a ceiling or wall through existing holes in the track. Do not exceed 4' spacing of track supports.

Concealed mini-coupler (order separately) connects tracks mechanically and electrically in a straight run

Power feeds

Use live end canopy kit for power feed from an outlet box mounted over the end of the track.

Use Saddle canopy for power feed from an outlet box mounted anywhere along the track. When mounting to a 3" octagon box the track must be oriented at 45 degrees to the mounting holes. Includes extra dead end cover.

Use live end power feed for direct power feed from overhead conduit or cable terminating in a 3/8" electrical fitting.

Use surface feed connector for power feed from surface conduit terminating in a 3/8" electrical fitting. It may also be used for direct power feed from overhead conduit or cable.

Mounting track to T-bar ceilings

Use T-bar mounting clips to mount the track to "T" bar ceiling runners. The clips attach through existing holes in the track. Do not exceed 4' spacing of clips.

Use T-bar canopy to feed power from conduit or cable to track mounted to a "t" bar ceiling.

Track patterns

The "L"/in-line connector, both feed and non-feed, may be installed straight or may be rotated to form a right angle. They are polarized and are prewired for power continuity and will accept power feed wires from an adjoining stem. The deeper Feed "L"/in-line connector accepts a 3/8" electrical fitting for direct power feed from conduit or cable or with an optional Radius outlet box cover 9060WH, BK it may be used for power feed from a 3" or 4" octagon outlet box.

The variable angle connector is polarized and prewired for power continuity. It can flex up to 90 degrees in all directions. Power cannot be fed into this connector.

Stem mounting

Stem kits (18" or 48") are used to suspend track from a ceiling. They attach through existing holes in the track. With the stem wire cover (order separately) they may be used to feed power to a live end, "L"/in-line connector or surface feed connector. The stem used for power feed must be located 9 5/16" from the end of the track for the wireway cover to fit properly. Stems for Radius track may not be cut in the field because they are threaded at both ends.

Basic/Advent

Lytespan - track application guide

Surface or stem mounted

Single track
Use individual track or plain track plus live end. May be cut in the field. Live end contains terminals for connection to power feed wires.

Straight run of track

Start with individual track (or plain track plus live end) of length desired and add as many 8' joiner tracks as required. May be cut in the field. Concealed mini-coupler connects track sections mechanically and electrically. Replace mini-coupler with in-line connector for power feed-in between track units. Power extension replaces dead end to permit power take-off from or power feed into end of track opposite live end. Power extension accepts same power feed kits as live end.

	A	B	C	D	E
Basic	2 23/32"	21 1/16"	3/32"	95 29/32"	4 1/8"
		45 1/16"			
		93 1/16"			
		141 1/16"			
Advent	4 1/2"	43 9/32"	3/32"	95 29/32"	4 1/2"
		91 9/32"			
		139 9/32"			

Surface mounting track

Direct mounting

Toggle bolts with nylon insulators, supplied with track, can be used to mount track to a wall or ceiling through existing holes in the track.

With track mounting clips

Mounting clips, provided with track, attach to track at any point. Use only for ceiling mounting.

Mounting to exposed grid suspended ceilings

Use grid ceiling mounting clips above for ceilings shown. Use grid ceiling canopy kit for power feed.

Do not exceed 4' spacing of track supports.

Power feed to surface mounted track from conduit or cable

Conduit or cable mounts directly to a Live End, "L", "T", "X", In-line or variable angle connector. Does not require separate power feed kit.

Floating invisible feed mounts anywhere along track installed with mounting clips for power feed to live end, "L", "T", "X", in-line or variable angle connector. May be located up to 4' from power feed-in point.

Power feed to surface mounted track from outlet box

Saddle canopy kit mounts at any point along basic track for power feed directly to track conductors. Includes extra dead end cover to replace live end.

Floating canopy kit mounts anywhere along track installed with mounting clips for power feed to live end, "L", "T", "X", in-line or variable angle connector. May be located up to 4' from power feed-in point.

Conduit adapter attaches to Live End of Basic Track for power feed from surface conduit terminating in 1/2-14 threaded electrical fitting. Not required for Advent Track.

Use grid ceiling canopy kit to feed power to the live end, "L", "T", "X", In-line or variable angle connector of track mounted to a grid ceiling. Its special outlet box mounts along a t-bar runner or at the intersection of t-bar runners.

Basic/Advent

Lytespan - track application guide

Track patterns

Use "L," "T," "X," In-Line, and variable angle connectors to turn corners or form "T" or "X" intersections. Power may be fed into the connectors. "L," In-Line, and variable angle connectors are polarized, "T" and "X" connectors are not. The "L" connector may be rotated for left or right angle turns. Jumper wires are provided for power continuity. Use plain track (or individual track with live end removed) and as many joiner tracks as required for each straight run of track between connectors. Connectors may be attached to cut track.

Add length (Y) to each track length to determine total length in patterns.

"L," "T," or "X" Connectors

(Y) Basic	(Y) Advent
2 1/16"	2 3/4"

Stem mounting track

Swivel stem

Stems (18" or 48") and swivel stems (48") attach to the track at any point, may be spaced up to 4' apart and may be cut in the field. 4' wire way cover provided with stems. **The stem extension kit** extends stem length 48" but may not be cut in the field because it is threaded at both ends. Stems can be used to feed power to a live end, "L," "T," "X," In-Line, or Variable Angle Connector; use stem closest to feed-in point. Not recommended for wall mounting.

Recessing track

Basic and Advent track can be recessed in 4' or 8' recessed housings. The housings may be installed individually or in straight runs and may be cut in the field. Use an individual track with a single housing. Use an individual track and as many joiner tracks as required for a run of housings. Lathing tabs, splines, and mounting clips are supplied with housings. Splines secure housings together. The **end splice box** is used for power feed and may be installed at the end of or between housings. End caps are provided with splice boxes.

"L," "T," and "X" Splice boxes permit recessed track to be installed in patterns. Each straight run of track between splice boxes is started with a plain track or individual track with live end removed and as many joiner tracks as required. 7/8" K.O.'S are provided for power feed. **Electrical connector kits** (order separately) are used for power feed or power continuity at corners and intersections. "L," "T," or "X" track connectors used for surface or stem mounted track cannot be used with recessed track.

Lytespan - Suspension beam

Lytespan - track application guide

Suspension beam

4' and 8' Suspension beam housings are designed to enclose **Basic** or **Advent** track. They may be installed individually or in straight runs and may be cut in the field. **End plates** and **track mounting clips** are furnished with 4' and 8' housings; couplers and splines are only provided with 8' housings.

Electrical connector kit

The **L housing/splice box** is used to form a right angle corner with suspension beam housing. **Electrical connector kits** (order separately) are required for power feed or power continuity at corners.

"L" Housing/splice box

Housings are suspended by **stems** or **cables**. Both attach to the housings at any point (except at wireway cover), may be spaced up to 8' apart, and may be shortened in the field. Stems may be lengthened with a **stem extension**. Stems can be used for housings in straight runs or patterns. Cables are only recommended for patterns.

Feed-in to corner with cable

Power continuity at corner

Stems or cables with electrical feed are used to feed power to a live end or an electrical connector at a corner. Electrical connectors at corners are spliced together for power continuity.

Feed-in to straight run with stem

Feed-in to corner with stem

Recessed housings and splice boxes must be installed before the ceiling is completed.

PowerTrip

Lytespan current limiting device

PowerTrip is a current limiting device designed for use with Lytespan Radius, Basic and Advent Track. It works by minimizing the impact of current and pending state and federal energy legislation that penalizes the use of track lighting; particularly with fluorescent or metal halide light sources in retail applications. Under Title 24 of the CA Energy Code, or ASHRAE 90.1, the actual wattage of fixtures on a given circuit of track is typically exceeded by the higher value of the “default” load as defined in the code. These codes force the use of the default load for power consumption calculations unless an integral current limiting device is installed on the track.

How it works

PowerTrip replaces standard live-end and in-line track power feeds and is just as easy to install. PowerTrip connectors contain a miniature electro-magnetic circuit breaker that limits the current load on the track to a specified amperage/ wattage. Exceeding the rating of the PowerTrip device by increasing fixture wattage or count breaks the circuit and shuts off power to the track. Remove the excess load, reset the PowerTrip breaker, and power is restored to the track.

The first integral current limiting device for line voltage track lighting.

How to select

Total the wattage (including ballast input wattage if applicable) of all fixtures that will be used on each circuit of track. Determine the default wattage as stipulated by the applicable code; either 45 watts per linear foot of track (in CA), or 30 watts per linear foot (most other states). If the actual load exceeds the default load PowerTrip is not required. If the default load is higher than the actual load select the PowerTrip kit that exceeds but is closest to the actual load.

How to order

PowerTrip is a two-part system. Choose the PowerTrip kit that best suits the power feed requirements of the installation, either Live-End or In-Line. Next choose the PowerTrip breaker module as shown in “How to select” above. Order both components separately.

Energy codes impacting track lighting

California Energy Code – Title 24

Section 130.c.3 of California’s Title 24 Energy Code states that; for the purpose of calculating the allowed energy consumption (in watts) for interior track lighting: “The wattage of line-voltage lighting track and plug-in busway which allows the addition or relocation of luminaires without altering the wiring of the system shall be the volt-ampere rating of the branch circuit feeding the luminaires or an integral current limiter controlling the luminaires, or the higher of the maximum relamping rated wattage of all of the luminaires included in the system, listed on a permanent factory-installed label, as specified by UL 1574, or 45 Watts per linear foot.”

ASHRAE 90.1-2004, Addendum e

9.1.4 (c) Luminaire Wattage

For line-voltage lighting track and plug-in busway, designed to allow the addition and/or relocation of luminaires without altering the wiring of the system, the wattage shall be:

1. The specified wattage of the luminaires included in the system with a minimum of 30 W/lin ft (98 W/lin m), or
2. The wattage limit of the system’s circuit breaker; or
3. The wattage limit of other permanent current limiting device(s) on the system.

Example calculation

A 20-foot installation of Lytespan Basic track is fitted with three 59 watt* T5 fluorescent wall washers. Under Title 24 the larger of the following two calculations will be used to quantify the total energy consumption of the system, regardless of the actual consumption.

3 fixtures X 59 watts/fixture = 177 actual watts; or
45 watts X 20 feet of track = 900 "default" watts.

By code the energy consumption of the system will default to the larger of the above two values, or 900 watts. Since the actual power consumption is 177 watts, a total of 723 watts (900-177) of lighting potential is forfeited.

However, if a 2.5A/300W PowerTrip kit is installed the code allows the following.

300 PowerTrip watts – 177 actual watts = 123 watts

By using PowerTrip only 123 watts of lighting potential is forfeited versus 723 watts without. PowerTrip "saves" 600 watts (723-123, or 900-300).

The above calculation is for example only. Philips Lightolier only warrants that PowerTrip breaker modules will perform as rated. Local authorities have jurisdiction over code interpretation and enforcement. The codes outlined here are current as of this printing. Local and municipal codes may vary and/or change without notice.

*Total input watts of metal halide ballast.

Accessories

Lytespan

Lytespan and ProSpec track lighting offer a full range of high performance accessories for tinting, coloring and shaping of the light beam. All accessories are designed to attach easily. Accessory holders hold one, two, or three accessories, simply choose the correct size needed for the attached shade.

A complete accessory consists of a size and series suffix. For example, **AF25 + UV = AF25UV** (2 1/2" UV Filter).

Diffusion/special filters

Series: **AF2** = 2" dia., **AF25** = 2 1/2" dia., **AF3** = 3 3/4" dia., **AF4** = 4 3/4" dia., **AF7** = 6 1/4" dia.

	UV Optivex UV reduction*		FR Frosted etched lens		SF Solite® soft focus lens
	PF Perimeter frost		IR** Infra-red reduction		
	SY Symmetrical spread lens		AS** Beam elongator lens		

*Optivex UV filters by Bausch & Lomb **Not for use on all fixtures. See fixture spec sheet

Hex cell louvers

Series: **AL**

- AL2HC** = 2" dia. Hex cell louver
- AL25HC** = 2 1/2" dia. Hex cell louver
- AL3HC** = 3 3/4" dia. Hex cell louver
- AL4HC** = 4 3/4" dia. Hex cell louver
- 7472** = 2" dia. Hex cell louver (Bare edge)

Color filters

Series: **ADF2** = 2" dia., **ADF25** = 2 1/2" dia., **ADF3** = 3 3/4" dia., **ADF4** = 4 3/4" dia., **ADF7** = 6 1/4" dia.

Primary colors

	RD Red

ProSpec surface mount track

ProSpec track

ProSpec track is a family of two circuit track products from Philips Lightolier designed to be used with all ProSpec and a selection of Lytespan lighting instruments. It is available in 4', 8' or 12' sections in either plain or feed units. The track is crafted of extruded aluminum and joins together with a nearly invisible seam for a continuous appearance. Tracks can be fed directly at the end or anywhere along its surface. ProSpec track can be mounted directly to a surface or with a choice of standard direct mounting clips which lower the track from ceiling by 3/8" to provide a neat appearance on uneven surfaces. ProSpec track may also be cable suspended in high and/or open ceiling applications.

120V and 277V

ProSpec track is available in the standard 120V/20A configuration, or with a 277V/20A rating for use with fluorescent and HID sources. 277V operates at a lower current than 120V allowing more wattage to be loaded on any given circuit. 277V may also save installation costs by reducing the number of power feeds that need to run to a large installation of track. The benefits and savings of 277V over 120V track are unique to each individual installation. Consult a registered electrician or electrical engineer to determine which voltage is best suited to the application.

ProSpec track specifications

- A two circuit track consisting of two separate 120v 60Hz 20 amp branch circuits, each with dedicated neutrals.
- Track is continuously grounded throughout but need not be polarized since the circuits are arranged symmetrically within the track.
- Flush adapters can be inserted in any orientation to access the circuit desired. Position of lever allows easy identification of circuit being used.
- Power is fed into integral feed wiring connector contained in the feed track.
- Track connectors are extruded aluminum housings with the same profile as the track to provide a clean continuous look. All connectors can be power fed except invisible coupler.
- All track sections may be field cut to length.
- Track has a profile of 1 3/16" with an average wall thickness of .08" creating a strong support for fixtures while minimizing deflections between ceiling mounts.

ProSpec Surface mount track

ProSpec track

Mounting ProSpec track

Direct mounting clips allow a clean appearance by spacing the track 1/16" from the mounting surface. Standard with all track units, they are nylon-coated to prevent rusting and ceiling marks. Toggle bolts and screws are also furnished with all units for direct mounting to the ceiling or wall.

Optional stand-off mounting clips provide rigid support and hold the track 3/8" from the mounting surface. The clips feature one-screw mounting/one-screw tightening. The track snaps onto the clips and can be moved into position before tightening the locking screws.

Straight runs of track

Begin with any length of feed track and add as many plain sections as desired. The concealed invisible coupler (Ordered separately) connects track sections mechanically and electrically. Replace the invisible coupler with in-line connector for power feed-in between track units. ProSpec Track may be cut in the field.

Making track patterns

Use "L", "T", "X", and in-line connectors to turn corners or from "T" or "X" intersections. Power may be fed into the connectors. Jumper wires are provided for power continuity. Use plain track for each straight run of track between connectors. Connectors may be attached to track that has been cut.

Stem mounting

ProSpec Track can be suspended from horizontal surfaces or sloped surfaces using ProSpec Stems. The stems (except extension stems) can be cut to any length to achieve the exact height desired. The minimum length obtainable from the ceiling is 3". Stems should not be spaced more than 4' apart. Swivel Stem Mounting Kits* are available to allow the track to hang vertically with the track opening horizontal to the floor. This is possible if the track is running parallel to the slope or perpendicular to the slope.

Direct feed into connectors

The feed track, power extension, "L", "T", "X" and In-Line Connectors contain a nut with a 1/2-14 thread to accept a 3/8" or 1/2" (trade size) electrical connector. Does not require a separate power feed kit.

Floating invisible feed

This can be mounted anywhere along the track at a maximum distance of 4 feet from the edge of track. The floating invisible feed accepts conduit or cable with 3/8" or 1/2" electrical connector (by others). It can be used with feed track, "L", "T", "X", and in-line connectors.

ProSpec recessed track

ProSpec recessed track

When an exceptionally clean look at the ceiling is desired, ProSpec's recessed track is the preferred choice. These flanged housings with integral track are available in 4', 8' and 12' sections for a simplified, all-in-one installation. Recessed track is available in either feed or plain units. The housing has minimum-width trim flange ideal for all ceiling materials and can be field-cut to length. ProSpec recessed track is designed to be recessed in dry ceiling applications only, such as sheet rock ceilings or suspended acoustic ceilings.

ProSpec recessed track specifications

- A two circuit recessed track consisting of two separate 120v 20 amp 60Hz branch circuits. Each circuit has dedicated neutral.
- Track is continuously grounded throughout.
- Flush adapters can be inserted in any orientation to access the circuit desired. Lever identifies which circuit is being used and is easily observed from floor.
- Material: aluminum with an average wall thickness of .08" creating a strong support for fixtures while minimizing deflections between ceiling mounts.
- ProSpec lighting units can be attached at any point along the length of the track.
- Floating splice box is available for convenient feeding of power to the installation.
- All recessed track sections may be field cut to length.

Installing ProSpec recessed track

- Power is fed into integral feed contained in the feed track.
- Recessed track can also be fed from a floating splice box installed at the end along the track length (order separately).
- Order one feed recessed track unit and as many plain recessed track units as required for each straight run of track between intercepts.
- Patterns can be constructed using the recessed "L", "T", "X" power extensions or in-line connectors.
- Power can be fed into recessed "L", "T", "X", in-line connectors, power extension connectors or feed track.
- Invisible Coupler is used to join straight tracks mechanically and electrically.
- All connectors are extruded aluminum housings with the same profile as the recessed track to provide a clean continuous look.
- All connectors can be joined to the cut end of the track.

ProSpec recessed flangeless track

Full ceiling integration

ProSpec recessed flangeless track provides full integration of the track system into the ceiling for the cleanest possible appearance. The housings with integral track are available in 4', 8' and 12' sections and feature a mounting flange that is completely concealed by the finished ceiling. The track sections are available in Feed and Plain units and can be field-cut to length. ProSpec recessed flangeless track is designed to be recessed in dry ceiling applications only, such as sheet rock or plaster ceilings.

ProSpec recessed flangeless track specifications

ProSpec PowerTrip

Current limiting device

PowerTrip

PowerTrip is a current limiting device designed for use with ProSpec track. It works by minimizing the impact of current and pending state and federal energy legislation that penalizes the use of track lighting; particularly with fluorescent or metal halide light sources in retail applications. Under Title 24 of the CA Energy Code, or ASHRAE 90.1, the actual wattage of fixtures on a given circuit of track is typically exceeded by the higher value of the “default” load as defined in the code. These codes force the use of the default load for power consumption calculations unless an integral current limiting device is installed on the track.

How it works

PowerTrip replaces standard live-end and in-line track power feeds and is just as easy to install. PowerTrip connectors contain a miniature electro-magnetic circuit breaker that limits the current load on the track to a specified amperage/ wattage. Exceeding the rating of the PowerTrip device by increasing fixture wattage or count breaks the circuit and shuts off power to the track. Remove the excess load, reset the PowerTrip breaker, and power is restored to the track.

How to select

Total the wattage (including ballast input wattage if applicable) of all fixtures that will be used on each circuit of track. Determine the default wattage as stipulated by the applicable code; either 45 watts per linear foot of track (in CA), or 30 watts per linear foot (most other states). If the actual load exceeds the default load PowerTrip is not required. If the default load is higher than the actual load select the PowerTrip kit that exceeds but is closest to the actual load.

How to order

PowerTrip is a two-part system. Choose the PowerTrip kit that best suits the power feed requirements of the installation, either live-end or in-line. Next choose the PowerTrip breaker module as shown in “How to select” above. Order both components separately.

The first integral current limiting device for line voltage track lighting.

Energy codes impacting track lighting

California Energy Code – Title 24

Section 130.c.3 of California’s Title 24 Energy Code states that; for the purpose of calculating the allowed energy consumption (in watts) for interior track lighting: “The wattage of line-voltage lighting track and plug-in busway which allows the addition or relocation of luminaires without altering the wiring of the system shall be the volt-ampere rating of the branch circuit feeding the luminaires or an integral current limiter controlling the luminaires, or the higher of the maximum relamping rated wattage of all of the luminaires included in the system, listed on a permanent factory-installed label, as specified by UL 1574, or 45 Watts per linear foot.”

ASHRAE 90.1-2004, Addendum E

9.1.4 (c) Luminaire wattage

For line-voltage lighting track and plug-in busway, designed to allow the addition and/or relocation of luminaires without altering the wiring of the system, the wattage shall be:

1. The specified wattage of the luminaires included in the system with a minimum of 30 W/lin ft (98 W/lin m), or
2. The wattage limit of the system’s circuit breaker; or
3. The wattage limit of other permanent current limiting device(s) on the system.

ProSpec PowerTrip

Current limiting device

Live end canopy 120V

- 26099WH** White
- 26099BK** Black

Live end suspended 120V

- 26S99WH** White
- 26S99BK** Black

Example calculation

A 20-foot installation of ProSpec track is fitted with three 59 watt* T5 fluorescent wall washers. Under Title 24 the larger of the following two calculations will be used to quantify the total energy consumption of the system, regardless of the actual consumption.

3 fixtures X 59 watts/fixture = 177 actual watts; or
45 watts X 20 feet of track = 900 "default" watts.

By code the energy consumption of the system will default to the larger of the above two values, or 900 watts. Since the actual power consumption is 177 watts, a total of 723 watts (900-177) of lighting potential is forfeited.

However, if a 2.5A/300W PowerTrip kit is installed the code allows the following.

300 PowerTrip watts – 177 actual watts = 123 watts

By using PowerTrip only 123 watts of lighting potential is forfeited versus 723 watts without. PowerTrip "saves" 600 watts (723-123, or 900-300).

The above calculation is for example only. Philips Lightolier only warrants that PowerTrip breaker modules will perform as rated. Local authorities have jurisdiction over code interpretation and enforcement. The codes outlined here are current as of this printing. Local and municipal codes may vary and/or change without notice.

*Total input watts of ballast.
