

SAFETY INSTRUCTIONS READ THIS FIRST KEEP THESE INSTRUCTIONS

This fixture is intended for installation in accordance with the National Electric Code (NEC) and local code specifications.
Failure to adhere to these codes and instructions may result in serious injury and/or property damage and will void the warranty.
If you have any doubts concerning installation, contact a qualified licensed electrician.

Before Installing:

1. This fixture can only be used with Kichler® Cabinet Lighting fixtures and accessories.
2. This fixture must be installed using interconnect cables 10573 (9"), 10572 (14"), 10571 (21") connected to wire module 10570 or existing Kichler® Cabinet Lighting fixture and can also be used by directly connecting to another Kichler® Cabinet Lighting fixture.
3. Maximum number of lamps per run can not exceed 30 lamps.

* Installations Using Interconnect Cable:

1. Determine desired location for mounting fixture. Mounting surface should be a minimum of 1/2" thick and approximately 2 1/2" clearance for interconnect cable should be allowed at both ends of fixture.
 2. Position fixture against mounting surface with bulb compartment towards back.
 3. Drive pre-installed screws into mounting surface until fixture is secure. If screws are difficult to install, remove screws and bushings, mark holes, and drill 1/16" maximum pilot holes.
 4. Connect fixture to existing Kichler® Cabinet Lighting system using interconnect cable.
 5. Hold interconnect cable to mounting surface and determine best path for cable. If interconnect cable is being run from cabinet to cabinet a notch such as a "V" could be cut in cabinet side panels to help keep cable out of sight.
- NOTE:** Interconnect cable is not intended for use through or concealed behind walls, floors or ceilings.
6. Peel backing off retaining clip(s) and affix to desired location(s). Surface should be as clean as possible.
 7. Slip cable into clip(s) and snap closed.
 8. If this will be the last fixture in a run, use connector cover over connector not being used.

* Installing Fixture to Fixture:

1. Align connector on end of new fixture with connector on end of existing fixture.
2. Push new fixture to existing fixture until fixtures are flush and connectors snap together.
3. Drive pre-installed screws into mounting surface until fixture is secure. If screws are difficult to install, remove screws and bushings, mark holes, and drill a 1/16" maximum pilot holes.
4. If this will be the last fixture in a run, use connector cover over connector not being used.

* Illustrations are shown using wire module and portable installations. But this unit can be used in any combination using Kichler® Cabinet Lighting fixtures and accessories.

Date Issued: 8/29/08

USING INTERCONNECT CABLE

FIXTURE TO FIXTURE

4. Opening Diffuser:

- Turn off fixture and allow to cool.
- Place finger tip on tab of each diffuser end cap.
- Lift and slide diffuser at tabs.
- Lower that edge of diffuser

Closing Diffuser:

- A. Swing edge of diffuser with tabs up toward fixture until pegs by tabs slip into slots in middle of fixture end caps.
- B. Slide tabs forward allowing pegs to seat in slots.
