

Stock #: EF75

Product Description:

3/4" straight concrete form pipe inserts connect rigid conduit to wood forms being used to make walls, floors and ceilings in poured concrete structures. Once the concrete is poured, conduits are buried and forms are stripped allowing the threaded access point on these connectors. The threaded access point on these pipe inserts create a quick and easy means of continuing the conduit run in the finished concrete shell structure. Garvin Industries' concrete form pipe inserts have multiple slots and holes that ensure the connectors stay fastened to wood forms and do not become dislodged during the concrete pour. Garvin Industries' unique rubber gasket seals pipes and prevents concrete slurry from distorting threaded holes on the connectors. Their rugged malleable iron construction ensures solid grounding while their smooth interior surface ensures wires do not get snagged when they are pulled after the concrete pour.

Product Specifications:

Material : Malleable Iron
Size : 3/4"
Style : STRAIGHT
Compliance : CUL,UL
