LMCS SOFTWARE AND DLM COMPUTER INTERFACE TOOLS

LMCS-100, LMCI-100 | [Wattstopper](#)

FEATURES & BENEFITS

LMCS software provides industry professionals with important commissioning documentation. With active real-time monitoring of the DLM system, field technicians can easily configure, manage, and update job information while onsite as well as set up advanced features of DLM devices. Recent new features include Network View, which provides a holistic view of all DLM networking components, and Riser Diagrams which provides a detailed layout of the lighting control system.

LMCI-100 interface tool connects to a USB port running LMCS-100 and to a DLM system through the RJ45 connector. The computer tools allow users to read, store, and modify DLM system configurations.

- PC interface tool and software for configuring DLM systems
- Active real-time monitoring of DLM system
- Easy-to-use graphical user interface
- Setup wizards and realistic system graphics
