Occupancy Sensors

Brand Features

Leviton offers many products that will help lower electrical costs and add convenience to everyday living. The PR150 sensor automatically turns the lights ON when you enter a room and OFF when you leave. Infrared occupancy sensors are passive devices designed to detect the movement of heat-emitting bodies. They are installed to monitor areas where there are no physical obstructions to block the sensor's field of view. **HOW IT WORKS:** People naturally emit a small amount of infrared heat. As a person passes through the field of view, the sensor detects the motion as a change in the infrared background and responds by switching on area lights. After the field of view is unoccupied for a user-defined delayed off time, the sensor will automatically turn off the lights.
