## Electrical Newsletter

**August  
2018**

### This month:

- Industry News
- Safety Message
- ECommerce Message
- Counter Days and Events
- Price Increases
- New Products

Twenty-five is the most significant number in the 2018 Profile of the Electrical Contractor research study findings. It means you're wearing many more and different hats than ever before. In the 2004 study, traditional electrical power/distribution made up 69 percent of the EC's revenue.

Most new construction and many renovation projects require the use of temporary power, which presents potential hazards, including shock, electrocution and fire. Responsibility usually falls to the electrical contractor to establish and maintain power safely. This responsibility includes coordinating with the general contractor or host on any special conditions or requirements they may have.
